IC 1978 MASTER

THE FIRST STEP

IC MASTER is the **first** and **only** complete guide to Integrated Circuits. Now you can turn to the one source that has become the first step in the critical selection of Integrated circuits. Whether an IC exists in new design or is one of thousands, you'll find it out in seconds by using the MASTER. . . .

TIME

The IC MASTER saves you time and lots of it . . . no longer do you have to spend long tedious hours and days searching through manufacturer's catalogs and data sheets for information. The MASTER gives you — at your fingertips — an easy way to narrow your IC choices quickly, accurately and systematically with the knowledge that you have just surveyed the entire industry.

IC MASTER and its quarterly updates are published by United Technical Publications, the largest electronic publisher in the world.

IC MASTER and its updates are published by United Technical Publications, Inc., Div. of Cox Broadcasting Corp., 645 Stewart Ave., Garden City, N.Y. 11530, (516) 222-2500. TWX: 510-222-1673. Sales and editorial offices: 1333 Lawrence Expressway, Santa Clara, Ca. 95051, (408) 248-8044. TWX: 910-338-0272.

A quick guide to your IC MASTER

PART NUMBER INDEX This revolutionary index takes all device types made by 84 IC manufacturers and arranges them in numerical sequence excluding prefixes or suffixes. You can now find a device number even though you do not know either the full part number or even the manufacturer. Once a basic device number is located in the index, you can obtain instant identification of all manufacturers making a device by that number and determine the full part number designation. All page references to data sheet material and any existing application notes abstracts are also provided.

PART NUMBER GUIDE An instant decoding kit. Information in this guide, provided by the manufacturers, allows you to break each company's part numbering system down into product temperature ranges, packaging variations, and functions. An invaluable tool for the elimination of costly and time consuming ordering errors caused by lack of standardization in part numbering systems.

APPLICATION NOTE DIRECTORY To prepare this directory each IC manufacturer reviewed his own application note inventory and identified all those application notes considered to be currently active. Thus, in addition to providing a directory of active application note abstracts, the IC MASTER directory also provides the first industry wide purge of obsolete material. Application note descriptions are arranged by Digital, Linear, Memory, and Microprocessor categories. Beneath those headings, material is arranged alphabetically by function and applications category. Each application note is listed by title, identifies the specific device featured, provides a 25 to 50 word abstract, and includes identity of both the authoring manufacturer and the specific application note number. This section provides all the information necessary for the engineer to update his application note files speedily or thoroughly research the existance of application note material for a specific design problem.

MILITARY PARTS DIRECTORY Cross Reference Chart identifies all IC devices having received JAN qualification. This chart includes a cross reference feature converting device numbers to Mil. Std. 38510 slash number and vice versa.

MILITARY DEVICE TESTING TABLE Lists more than 40 major manufacturers and shows, in matrix form, those device types tested to Mil. Std. 38510 as well as screening performed to Mil. Std. 883. Those companies willing to perform special screening to customer's unique military requirements are also identified.

MILITARY PARTS INDEX A "first ever" functional guide to JAN qualified parts. Now it is possible to search by device and function to determine whether a JAN qualified part exists for your application, and if so, obtain both the device and 38510 slash numbers.

©IC MASTER 1978

ALTERNATE SOURCE DIRECTORY The first industry-wide, pin-for-pin functional equivalent Alternate Source Directory ever available. This directory was developed by asking each IC manufacturer to identify each competitive device for which he made a pin-for-pin interchangeable alternate. This unique approach took nearly three years to complete, is updated quarterly, involving countless manhours of catalog searching and specification comparison.

MASTER SELECTION GUIDE This Guide, covering virtually every facet of the industry, organizes ICs into these categories: Digital, Interface, Linear, Memory and Microprocessors. In each category, products are further classified by type (CMOS, ECL, TTL, etc.) and function (Arithmetic, Counters, Gates, etc.). You'll find every IC performing that function listed by part number and manufacturer. The Five Master Selection Guides will allow you to search for ICs by your specific requirements and identify all major available devices and sources.

MANUFACTURER & DISTRIBUTOR DIRECTORY Locate the nearest local source for additional information or quick delivery of needed products. A fingertip communications guide listing the location and phone number for all manufacturer's field sales offices, reps, and distributors, both domestic and international.

PRODUCT INDEX Arranges 84 IC manufacturers in alphabetical order by manufacturer and provides a complete alphanumeric listing of each company's IC standard product line. Adjacent page number references are provided for instant referral to needed technical information.

QUARTERLY UPDATES This service assures that all this vast body of information is constantly refreshed. Each issue updates your Master book on a CUMULATIVE basis. Your guarantee that the IC MASTER will remain the most complete and current industry-wide source available for the first step in IC selection.

PART NUMBER INDEX

This index shows the page and line on that page where each device appears in the Master Selection Guide, and application notes are indicated by a ¶ sign. The list is prepared by a computer from the data in these sections so every device in them is listed. The devices are arranged in order by basic numbers so similarly numbered devices from various manufacturers are grouped together. Bold faced listings lead to the data supplied by the manufacturers. Use this index to locate key operational characteristics, application notes, and devices data whenever you have a model number.

how to use the part number index

This Part Number Index is arranged in alpha-numeric sequence, ignoring the manufacturer's prefixes and suffixes and using the basic model numbers. This basic number sequence is sorted by reading the digits from **left** to **right**, assuming that letters come before numbers. (As an example, these numbers would appear in the following order: 5301, 531, 54H01, 54139, 5414.) Under each basic number, the manufacturer's name and full model number is listed. The page references in **BOLD FACE** lead to manufacturers' data and application notes are indicated by a ¶ sign.

The arrangement of this index by base number gives you several advantages. It allows you to find a device by its basic number whether or not you know the name of the manufacturer or the manufacturer's prefixes. Also it groups similar devices together so that when you are looking for data you can quickly determine if the data has been provided in the book by any of the manufacturers and where that data is. Similarly it groups any references to application notes close together so that you do not need to guess which manufacturer might publish application notes on a device before you can locate them.

Once you become familiar with the alpha-numeric numbering sequence, you'll find that this index is very easy to use.

PART NUMBER GUIDE

Each IC manufacturer has his own unique method at identifying products, usually through a system of logos, device number prefixes and suffixes. This Part Number Guide is arranged alphabetically by manufacturer and describes each company's part number system. JAN nomenclature is also covered.

Manufacturer	Part Number — Prefix	Part Number — Suffix	Example

ADVANCED MICRO DEVICES

Note: Alternate source devices follow original manufacturer's part number and marking system.

Prefix

Functional Group
- **25** MSI
- **26** Computer Interface
- **27** Bipolar Memory
- **28** MOS
- **29** Bipolar Microprocessor
- **90** MOS
- **91** MOS
- **92** MOS
- **94** MOS
- **95** MOS

Type
- **L** Low Power
- **S** Schottky
- **LS** Low Power Schottky
- **(Blank)** Standard

Suffix

Package
- **D** Hermetic DIP
- **P** Molded
- **F** Flat
- **X** Dice

Temperature Range
- **C** Commercial
- **M** Military

Example

Prefix	Device	Suffix
AM25	S 05	D M

AM25 — Functional Group; S — Type; 05 — Device Number; D — Package; M — Temperature Range

AMERICAN MICROSYSTEMS

AMI®

Prefix

Family
- **S** Standard

Suffix

Package Type
- **1** Plastic
- **2** Cer-DIP
- **3** SLAM
- **4** Ceramic (Three Layer)
- **5** TO Type

Package/Pins
- **C** 22 Pin Plastic or Cer-DIP
- **D** 14 Pin Plastic or Ceramic
- **F** 12 Pin TO
- **H** 16 Pin Cer-DIP, SLAM, or Ceramic
- **I** 28 Pin Cer-DIP or SLAM
- **L** 24 Pin Cer-DIP or SLAM
- **M** 40 Pin SLAM
- **P** 18 Pin Plastic or Cer-DIP
- **T** 40 Pin Plastic
- **U** 16 Pin Plastic
- **W** 24 Pin Plastic
- **Z** 28 Pin Plastic

Example

Prefix	Device	Suffix
S	1103X	2 P

S — Family; 1103X — Version; 2 — Package Type; P — Number of Pins

ANALOG DEVICES

ANALOG DEVICES

Prefix

AD Analog Devices

Suffix

Temperature Range
- **A,B,C** Industrial Range
- **J,K,L** Commercial Range
- **S,T,U** Military Range

Package
- **D** 8 Pin Ceramic DIP
- **DN** Ceramic DIP
- **F** Ceramic Flatpack
- **H** TO-5 Type Can
- **N** Plastic DIP

Example

Prefix	Device	Suffix
AD	7516	JN

JN — Temperature Range; Package

BECKMAN INSTRUMENTS

Beckman

BECKMAN

Prefix

Family (Model Number)
- 801-809, 851-859 Voltage Regulators
- 811-816, 862, 863 Ladder Networks
- 822, 823, 833, 866 Amplifiers
- 840 Voltage References
- 845-872, 877 D/A Converters
- 873, 876 A/D Converters
- 882, 883 Active Filters

Suffix

Package Type
- **M** Metal
- **C** Ceramic
- **G** Glass

Version (Function)
- **I** Current
- **V** Voltage

Accuracy Level
- **D1** Best Level
- **D2**

Example

Prefix	Device	Suffix
877-	85	MV- D1

877- — Family; 85 — Model No.; MV- — Package Type; V — Version (Function); D1 — Accuracy Level

BURR-BROWN

BURR-BROWN

Prefix

Temperature
- **H, J, K, L** 0°C to +75°C
- **R, S, T** −55°C to +125°C
- **A, B, C** −25°C to +85°C

Suffix

Package
- **M** Metal
- **P** Plastic
- **Q** MIL-883 Screening

Example

Prefix	Device	Suffix
	3532	AMQ

AM — Temperature Range; Q — Package; MIL-883 Screening

©IC MASTER 1978

Manufacturer	Part Number: Prefix	Part Number: Suffix	Example

DATEL SYSTEMS

Family
- **ADC** A/D Converters
- **AM** Amplifiers
- **DAC** D/A Converters
- **DAS** Data Acquisition System
- **FLT** Filters
- **MV, MX** Multiplexer
- **SHM** Sample-Hold
- **VF** Voltage to Freq. Converters

Package — Monolithic
- **1** 14 Pin DIP
- **2** TO-99

Seal — Hybrid
- **G** Epoxy
- **M** Hermetic

Temperature
- **C** 0°C to 70°C
- **M** −55°C to 125°C
- **R** −25°C to +85°C

Prefix	Device	Suffix
AM	490	2 A
DAC	HZ12B	G C

Package — Selection — Seal — Temperature

ELECTRONIC ARRAYS

Note: Alternate source devices follow original manufacturer's part number and marking system.

Family
- **10** Static Shift Register
- **12** Dynamic Shift Register
- **15** N Channel ROM
- **20** Keyboard Encoder
- **3X** Dynamic ROM
- **4X** Static ROM

Package
- **D** Hermetic DIP
- **F** Flat Pack
- **P** Molded DIP
- **T** TO-Can
- **X** Dice

Temperature Range
- **C** 0° to 70°C
- **I** −55°C to 85°C
- **L** −55°C to 100°C
- **M** −55°C to 125°C
- **X** Other

Prefix	Device	Suffix
EA	1500A	DM

Family — Package — Temperature Range

EMM/SEMI

A. Semi Product

Special Application
- **B** Reduced Power Supply Level Operation
- **L** Very Low Power Operation
- **M** MIL-STD-883, Condition B

Electrical Variation
- **U** Standard
- **A** Variation A
- **B** Variation B, etc.

Temperature Range
- **C** 0°C to +70°C
- **D** 0°C to +70°C Plus 168 Hour Supplemental Burn-in
- **M** −55°C to +125°C Plus 168 Hour Supplemental Burn-in
- **S** −35°C to +85°C Plus 168 Hour Supplemental Burn-in

Package
- **A** DIP, Ceramic, 18 Pin
- **B** DIP, Plastic, 18 Pin
- **C** DIP, Ceramic, 22 Pin
- **D** DIP, CERDIP, Ceramic, 22 Pin
- **E** DIP, CERDIP, Ceramic, 18 Pin
- **G** Chip Carrier, Ceramic, Leadless, 22 Pin
- **P** DIP, Plastic, 22 Pin

Prefix	Device	Suffix
M	4200	UCC

Special Application — Electrical Variation — Temperature Range — Package

B. General Instrument

Second Source Marking

Family
- **RO** ROM
- **RA** RAM

Prefix	Device
SEMI	RA-3-4256

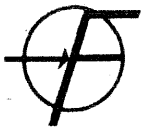
Family — Package

EXAR INTEGRATED SYSTEMS

XR Exar

Grade
- **C** Commercial
- **M** Military (Ceramic package and −55°C to 125°C)
- **( )** The absence of C or M Indicates a Commercial Part with Tighter Specs

Package
- **D** Dice
- **P** Plastic
- **N** Ceramic
- **T** TO-99, TO-100, TO-101 Metal Can



Prefix	Device	Suffix
XR	567	CP

NATIONAL

DEVICE NUMBER (for Digital Devices):
CDXXXX-CMOS —
C Suffix −40°C to 85°C,
M Suffix −55°C to 125°C.

DM54XX — All numbers beginning with 5 denote −55°C to 125°C temperature operation.

DM74XX — If the "74" is indicated, the operating temperature is 0°C to 70°C.

DM7XXX — All other numbers beginning with 7 (besides the "74" shown above) are NSC proprietary products and a 7 here indicates −55°C to 125°C.

DM8XXX — All numbers beginning with 8 denote 0°C to 70°C temperature operation.

- **45** 4½ Digit

Linear Devices
With proprietary linear circuits, a 1-2-3 numbering system is employed.
The 1 denotes a Military temperature range device (−55°C to 125°C), the 2 denotes an Industrial device (−25°C to 85°C), and the 3 denotes a Commercial device (0°C to 70°C). i.e. LM101/LM201/LM301. Exception to this are the LM1800 Series; some hybrid circuits which employ a "C" Suffix; and second-source products which follow the original manufacturers numbering system.

Characteristics

- **A** Improved Electrical Specs
- **C** Reduced Temperature Range

Package

APPLICATION NOTE DIRECTORY

The Application Note Directory is a comprehensive guide to the many IC application notes available. It lists the devices covered, describes each note, and tells who publishes each one.

how to use the application note directory

The application notes in this directory can be located by function or device number.

1. To find out what is published by function, locate the closest topics in the index below, turn to the pages indicated, and scan through the listings.

2. To find all the application notes covering a given device, look up the device in the Part Number Index at the front of this book. The ¶ sign leads to application notes.

3. To find out what application notes are available from a particular manufacturer, look up the manufacturer in the Product Index. The table gives you the titles and the page locations for each manufacturer's application notes in this directory.

The application note descriptions are organized under the headings: Digital, Linear, Memory and Microprocessor. Beneath those headings are functional and applications categories arranged alphabetically. Within each category the notes are arranged in alphabetical sequence by manufacturer. The mixing of functions and applications is necessary, since application notes do not lend themselves to classification entirely by function or entirely by application. When an application note fits under several categories, it is listed in one and cross referenced by the others. This may mean that you have to spend five minutes checking a number of categories to be sure you've found everything you want, but finding suitable information can save you considerable design time.

If an application note covers specific devices or it shows in some detail how certain devices are used, these device numbers are listed in parentheses just below the title.

The application note descriptions are as short as possible. They are designed to save you time in reading while giving an overall sense of the contents. The length of each note is indicated in parentheses on the last line; if the note is bound into a book, the last line will show that it is part of a handbook, databook, catalog, etc.

Once you have determined which application notes you need, contact the manufacturer's sales office or write to the manufacturer. Be sure to give both the title and the application note number. Addresses and phone numbers are listed in the Manufacturers and Distributors Directory.

DIGITAL

Arithmetic

1 **"A Successive Approximation Register"**
(AM2502, AM2503, AM2504, AM25L02, AM25L03, AM25L04)
Operation, logic, coding of these 8 and 12 bit TTL devices. Describes applications in systems performing recursive arithmetic operations; as ring counters; serial-to-parallel converters.
Advanced Micro Devices Application Note (11 pg.)

2 **"The AM2506 — A Latching ALU"**
(AM2506)
Combines four-bit arithmetic logic unit and four-bit latch. Describes application in high-speed multiple word adder, multiple master-slave registers, 16-word arithmetic register, multiplication at 16 MHz rate.
Advanced Micro Devices Application Note (4 pg.)

3 **"Multiplying Made Easy for Digital Assemblies"**
(AM2505)
Discusses multiplication algorithms and use of the device.
Advanced Micro Devices (6 pg.)

4 **"Overflow Detector in Binary Adders"**
(AM9309)
Discusses the detection of overflow errors using an IC multiplexer.
Advanced Micro Devices (2 pg.)

5 **"A 2's Complement Digital Multiplier: The AM2505"**
(AM2505)
Discusses high speed multiplication and use of this device to perform 2's complement multiplication.
Advanced Micro Devices (11 pg.)

6 **"AM25S10 Four-Bit Shifter"**
(AM25S10)
Provides functional description and discusses logic equivalents. Applications: up-shift, down and around end shifts, scaling and fixed multiplication.
Advanced Micro Devices Application Note (10 pg.)

7 **"Two's Complement Multiplication"**
See Digital Signal Processing Handbook under (Digital) LSI General (AMD).

8 **"Applications of the TTL/MSI 93S43 4-Bit by 2-Bit Two's Complement Multiplier"**
(93S43)
How to implement a combinatorial multiplication array of any size for two's complement numbers. How to multiply in other number representations. Speed/hardware tradeoffs, normalization of floating point numbers after multiplying, rounding or truncation of double length products.
Fairchild Application, Note 329 (15 pg.)

9 **"MECL 10,000 Arithmetic Elements MC10179, MC10180, MC10181"**
See listing under (Digital) High Speed Logic (Motorola).

10 **"NBCD Sign and Magnitude Adder/Subtracter"**
(MC14560, MC14561)
Describes CMOS parallel adder-subtracters for both signed and unsigned natural binary coded decimal (NBCD) numbers.
Motorola AN-738 (7 pg.)

11 **"High-Speed TTL Adders"**
(DM5483, DM7483)
Describes 16-bit parallel adders, using the DM7283, DM8383, and connections for ripple-carry addition. Also describes BCD adder techniques implemented with these devices. Shows how the devices can be used to improve the performance of MOS storage systems.
National AN-35 (6 pg.)

Arithmetic (cont)

12 **"Arithmetic Arrays Using Standard COS/MOS Building Blocks"**
(CD4001, CD4008, CD4011, CD4013, CD4019)
Describes design of a 32-bit full adder/arithmetic logic system. Discusses four-bit full adder, quad AND-OR select gate, dual D-type flip-flop, input NAND gates, input NOR gates, and arithmetic register.
RCA ICAN-6600 (6 pg.)

13 **"COS/MOS Rate Multipliers — Versatile Circuits for Synthesizing Digital Functions"**
(CD4089, CD4527)
Describes operation of a rate multiplier, and the effects of cascading. Covers addition, subtraction, multiplication, division, square and higher order roots, frequency ratios and integration. Also discusses symmetric operations.
RCA ICAN-6739 (12 pg.)

14 **"Converting To and From Binary Using the SN74184 and SN74185A"**
(SN74184, SN74185A, SN74283, SN74284, SN74285)
Compares conventional shift and add technique to conversion from binary to BCD using the 74185A. Tells how to interconnect these converter packages for 6-bit through 20-bit binary inputs and 4, 5 or 6 decade BCD inputs. Describes conversion of fractions using the 74283, 74284 and 74285.
Texas Instruments Application Report CA-171 (19 pg.)

15 **"Fast Multipliers Using TTL Read Only Memories"**
See listing under (Memory) ROMS. Texas Instruments)

CMOS

16 **"Intrinsically Safe Data Acquisition"**
Presents methods by which CMOS circuitry can be used in the construction of intrinsically safe low-level multiplexers, A/Ds, and instrumentation amplifiers.
Burr-Brown AN-84 (4 pg.)

17 **"Minimizing Gate Oxide Failures Due to Handling"**
Describes oxide failure mechanisms, evaluates input protection techniques, and recommends handling procedures to avoid failure.
Harris Application Report 208 (3 pg.)

18 **"CMOS: Some Application Guidelines"**
Presents General Guidelines when using CMOS.
Harris Application Note 209 (7 pg.)

19 **"Using Junction Isolated CMOS"**
Covers problems and application rules related to forward biasing CMOS inputs and outputs.
Harris Application Note 210 (4 pg.)

20 **"Avoiding CMOS Noise-Sensitivity Problems"**
Describes noise sensitivity problems peculiar to MOS technologies and solution to these problems.
Harris Semiconductor AN-211 (6 pgs.)

CMOS (cont)

1 "CMOS Analog Multiplexers and Switches; Applications, Considerations"
Covers selection criteria, parameter definitions, handling and design precautions, typical applications, and other topics concerning CMOS analog multiplexers and switches.
Harris Semiconductor AN-520 (9 pg.)

2 "Getting the Most Out of CMOS Devices for Analog Switching Jobs"
Describes latch-proof junction isolation, floating-body junction isolation, and dielectric isolation as solutions to CMOS problems when applied to analog design.
Harris Semiconductor AN-521 (7 pg.)

3 "MasterMOS, a Custom CMOS System"
(MasterMOS)
Describes the construction of these devices which are customized by changing the metalization pattern.
International Microcircuits (6 pg.)

4 "MasterMOS Design Manual"
(MasterMOS)
Detailed instructions and drawing for customizing these arrays.
International Microcircuits $35.00 (70 pg.)

5 "A New CMOS Analog Gate Technology"
See listing under (Linear) Switches. (Intersil)

6 "NBCD Sign and Magnitude Adder/Subtracter"
See listing under Arithmetic (Motorola)

7 "A 3½ Digit DVM Using an Integrated Circuit Dual Ramp System"
See listing under (Linear) Instrumentation (Motorola)

8 "Noise Immunity Comparison of CMOS Versus Popular Bipolar Logic Families"
Compares the noise immunities of TTL, DTL, HTL, and CMOS logic families. Discusses common noise sources, precautions against noise, noise specification, and standard noise tests.
Motorola AN-707 (8 pg.)

9 "Introduction to CMOS Integrated Circuits with Three-State Outputs"
Describes a wide variety of CMOS ICs incorporating transmission gates with standard logic. Gives design rules. Covers applications in analog switching and multiplexing, digital multiplexing, and data bussing.
Motorola AN-715 (19 pg.)

10 "Scanning Logic for RF Scanner-Receivers Using CMOS Integrated Circuits"
Describes rf scanner-receiver control functions using standard CMOS devices. Covers crystal switching and priority channel monitoring with mention of phase-locked loop designs.
Motorola AN-753 (7 pg.)

11 "CMOS Monostable Multivibrators"
(MC14538B)
Covers theory of operation with emphasis on pulse widths, retriggerable and non-retriggerable operation. Describes use in a tachometer.
Motorola AN-772 (7 pg.)

CMOS (cont)

12 "CMOS, the Ideal Logic Family"
(MM54C Series, MM74C Series)
Describes characteristics of CMOS circuits. Discusses system considerations, such as unused inputs, data bussing, paralleling circuits for extra drive, and interface to other logic families.
National AN-77 (8 pg.)

13 "CMOS Linear Applications"
(MM74C00, MM74C02, MM74C04)
Describes use of CMOS devices biased to operate at the midpoint of the transfer characteristics.
National AN-83 (3 pg.)

14 "CMOS Oscillators"
Describes square wave oscillators that can be built with CMOS logic elements.
National AN-118 (4 pg.)

15 "54C/74C Family Characteristics"
(MM54C Series, MM74C Series)
Discusses output, noise and temperature characteristics, power consumption, and propagation delay for the 54C/74C logic family.
National AN-90 (6 pg.)

16 "MM54C/74C Voltage Translation/Buffering"
See listing under Interface (National)

17 "Designing with MM74C908, MM74C918 Dual High Voltage CMOS Drivers"
(MM74C908, MM74C918)
Presents curves for power dissipation design limits. Shows simple driver circuits plus flasher, oscillator, siren and latch applications.
National AN-177 (12 pg.)

18 "COS/MOS Integrated Circuits Manual"
(CD4000 series)
Discusses fabrication, logic system design, and applications of RCA COS/MOS circuits.
RCA CMS-271 $2.50 (224 pg.)

19 "Noise Immunity of COS/MOS Integrated-Circuit Logic Gates"
(CD4000A, CD4001A)
Evaluates noise immunity of the CD4000A/01A gates with respect to external noise, crosstalk, transmission-line reflections, power-linet noise, and ground-line noise. Includes schematics and logic diagrams.
RCA ICAN-6176 (8 pg.)

20 "A Typical Data-Gathering & Processing System Using CD4000A-Series COS/MOS Parts"
(CD4000 Series)
Describes data-gathering and processing system using CMOS circuits. Includes discussion of input signal conditioning and transmission, the digital processor unit, receiver, memory, arithmetic unit, display unit, output buffer, output transmitter, receiver, and control unit.
RCA ICAN-6210 (11 pg.)

21 "Gate-Oxide Protection Circuit in RCA COS/MOS Digital Integrated Circuits"
(CD4000 Series)
Gives description and schematics for the protection circuits.
RCA ICAN-6218 (2 pg.)

©IC MASTER 1978

DIGITAL

CMOS (cont)

1 **"Radiation Resistance of the COS/MOS CD4000A Series"**
(CD4000A Series)
Provides a graph plotting permanent radiation resistance of CD4000A series. Discusses design considerations for increasing resistance.
RCA ICAN-6224 (2 pg.)

2 **"Guide to Better Handling and Operation of CMOS Integrated Circuits"**
Recommends specific handling and operating practices to minimize the probability of damage in the manufacturing and field environments.
RCA ICAN-6525 (5 pg.)

3 **"Using the CD4047A in COS/MOS Timing Applications"**
(CD4047)
Compares this monostable-astable multivibrator with simpler types of oscillator circuits and discusses applications, including a noise discriminator, low-pass and band-pass filters, a frequency discriminator, and a pulse generator.
RCA ICAN-6230 (13 pg.)

4 **"A COS/MOS PCM Telemetry and Remote Data Acquisition Design"**
(CD4000 Series)
Describes data transmission formats and the following data acquisition sections: analog and digital multiplexers, A/D converters, transmission formatters and system programmers.
RCA ICAN-6289 (12 pg.)

5 **"Power Supplies for COS/MOS"**
(CD4000 Series)
Discusses the factors involved in the selection of CMOS supply voltages including the system operating frequency, noise immunity and power dissipation. Examples of simple power supply circuits are also given.
RCA ICAN-6304 (5 pg.)

6 **"Applications of the RCA-CD4093B COS/MOS Schmitt Trigger"**
(CD4093B)
Describes characteristics of the CD4093 quad 2-input Schmitt trigger. Covers applications in waveshaping (sinewave to square-wave, edge delay, edge detection), power-on reset, astable multivibrators and use as a Schmitt trigger for noise immunity.
RCA ICAN-6346 (6 pg.)

7 **"Using the CD4520B to Design Dividers with Symmetrical Outputs"**
(CD4520B)
Describes how to use this CMOS counter to divide an input frequency by N where N is any integer from 2 to 256 and obtain outputs with approximately 50% duty cycles.
RCA ICAN-6362 (10 pg.)

8 **"Fundamentals of Testing COS/MOS Integrated Circuits"**
Describes the techniques employed in testing CMOS devices to assure their adherence to data sheet specs.
RCA ICAN-6532 (14 pg.)

9 **"Understanding Buffered and Unbuffered CMOS Characteristics"**
Presents the relative merits of buffered and unbuffered CMOS devices. Provides background, definitions, and an applications chart.
RCA ICAN-6558 (8 pg.)

CMOS (cont)

10 **"Radiation Resistance of the COS/MOS CD4000A and CD4000B Series"**
(CD4000 Series)
Studies permanent and transient radiation as they affect CMOS devices.
RCA ICAN-6563 (3 pg.)

11 **"Power-Supply Considerations for COS/MOS Devices"**
(CD4000 Series)
Includes discussion of quiescent device dissipation, switching characteristics, ac dissipation and ac performance characteristics, calculating system power, power supply regulation and filtering requirements.
RCA ICAN-6576 (6 pg.)

12 **"Interfacing COS/MOS with Other Logic Families"**
(CD4000A Series)
Describes conditions governing interface of CMOS 4000A series with other logic families.
RCA SSD-203 ICAN-6602 (12 pg.)

13 **"Battery-Powered Digital-Display Clock/Timer and Metering Applications Utilizing the RCA CD4026A and CD4033A Decade Counters 7-Segment Output Types"**
(CD4009, CD4010, CD4026, CD4033)
Describes the CD4026A/33A ICs and their use with 7-segment display units. Discusses interface packages and methods to help the designer optimize his system. Includes a discussion of battery-operated systems for digital clocks and watches.
RCA ICAN-6733 (16 pg.)

14 **"CMOS/MOS Interfacing Simplified"**
See listing under (Digtial) Interface (RCA)

15 **"CMOS/MOS Rate Multipliers — Versatile Circuits for Synthesizing Digital Functions"**
See listing under (Digital) Arithmetic (RCA)

16 **"Design of Fixed and Programmable Counters Using the RCA 4018A COS/MOS Presettable Divide-by-"N" Counter"**
See listing under (Digital) Counters. (RCA)

17 **"Application of CD4016A Quad Bilateral Switch"**
See "Transmission and Multiplexing of Analog or Digital Signals Using the CD4016A Quad Bilateral Switch" Under (Digital) Data Transmission. (RCA)

18 **"Using Complementary MOS Circuits"**
(SCL4013A, SCL4046A, SCL4018A, SCL4026A, SCL4029A, SCL4404A)
Reviews CMOS operation, cost, and reliability. Discusses application of the SCL4018A in a three decade rate multiplier; the SCL4029A in counting devices; the SCL4404A and SCL4031A in A/D converters; and SCL4016A in analog switching.
Solid State Scientific AN-101 (6 pg.)

19 **"CMOS Expandable Gates"**
(SCL4402A, SCL4412A)
Compares the transfer characteristics of ordinary CMOS gates to those gates using double buffered output. Includes performance characteristics and discusses expansion of SCL4412A and SCL4402A to 12-input NOR, 16-input OR, and other combinations.
Solid State Scientific AN-102 (3 pg.)

20 **"CMOS Integrated Circuits in Automotive Applications"**
General discussion, also includes discussion of high current circuits, constant current or constant impedance circuit, digital time delay circuit, digital low-pass filter.
Solid State Scientific AN-103 (5 pg.)

CMOS (cont)

1 **"Interfacing with CMOS"**
Describes electrical characteristics of CMOS inputs and outputs. Discusses interfacing CMOS with CMOS, PMOS, NMOS, DTL/TTL, HTL, and CL.
Solid State Scentific An-104 (5 pg.)

2 **"Improved CMOS Gate Design"**
(SCL4000 Series)
Description of the output buffering of the SCL4000 Series
Solid State Scientific AN-105 (3 pg.)

3 **"A Simplified Approach to Testing CMOS Inverters and Gates"**
Bench tests using a lower supply and a V-O-M are described. They include continuity, input leakage, quiescent device current, output voltage, noise immunity, output drive current and threshold voltage.
Solid State Scientific AN-107 (4 pg.)

4 **"Applications of CMOS Integrated Circuits in Communications Equipment"**
(SCL4000 Series)
Uses of SCL4000 Series circuits as frequency synthesizers, digital frequency displays, frequency scanners, and squelch circuits.
Solid State Scientific AN-108 (4 pg.)

5 **"CMOS Wave Shaping and Level Detection"**
Describes methods to obtain modified transfer charactertistics of double buffered NAND gates, by connecting inputs together, connecting extra inputs to V_{cc}, etc. Shows how to obtain variable amounts of hysteresis, and describes systems of level detection using trigger circuits.
Solid State Scientific AN-109 (5 pg.)

6 **"Using the SCL 4528 Dual Monostable Multivibrator"**
(SCL4528)
Describes operating modes and timing, equations for pulse width calculations.
Solid State Scientific AN-111 (6 pg.)

Consumer

7 **"A Naviation Receiver That Uses A Digital Frequency Synthesizer"**
(μA719)
Gives schematics for a navigation receiver. Discusses the digital frequency synthesizer, varactor tuned RF amplifier, AGC amplifier, mixer, IF amplifier, and detector portions.
Fairchild Application Note 178 (6 pg.)

8 **"Industrial Clock/Timer Featuring Back-up Power Supply Operation"**
Describes the design and operation of a clock timer with digital readout suitable for industrial control applications. CMOS circuits are used for reduced power.
Motorola AN-718A

9 **"Calculator Learns to Keep Time"**
Describes stopwatch and keyboard controlled interval timing functions using the MM5736 calculator chip.
National AN-119 (8 pg.)

10 **"Handheld Calculator Battery Systems"**
Describes the tradeoffs in battery performance for 6.5-9.5v calculators driven by 2, 3 and 4 cell as well as 9v. batteries.
National AN-149 (4 pg.)

Consumer (cont)

11 **"High Voltage Shift Registers Move Displays"**
See listing under (Memory) Shift Registers (National)

12 **"Timekeeping Advances Through COS/MOS Technology"**
Discusses basic oscillator design considerations, practical oscillator circuits, and some typical timing-circuit applications, including wristwatches, wall clocks, and auto clocks.
RCA ICAN-6086 (12 pg.)

13 **"CMOS Integrated Circuits in Automotive Applications"**
See listing under (Digital) CMOS. (Solid State Scientific)

14 **"Automotive Electronics: Choosing the Right Technology"**
Defines operational considerations and compares CMOS, PMOS, and bipolar.
Sprague TP 74-5 (10 pg.)

Counters

15 **"Single IC Forms 2-to-9-Bit Ring Counter"**
(AM2503)
Describes use of device to make a ring counter.
Advanced Micro Devices (2 pg.)

16 **"Design for a Battery Operated Frequency Counter"**
(ICM7207A, ICM7208)
Describes the design, circuit and layout of a 7 digit frequency and period measurement counter.
Intersil A015 (6 pg.)

17 **"Using the MK5009P MOS Counter Time-Base Circuit"**
(MK5009)
Describes the use of the MK5009 along with complete circuits for a digital frequency meter, pulse generator and digitally-programmable one-shot. Discusses operation of the units oscillator circuit.
Mostek AN-104 (4 pg.)

18 **"Applications Using the MK50395 Six Decade Counter Display Totalizer"**
(MK50395, MK50396, MK50397)
Discusses use of the counter in batch control position measurement, greater-than less-than detection, automatic stop, frequency counter, darkroom timer, digital tuning, and N-Pulser applications.
Mostek (16 pg.)

19 **"Application Information Using Mostek's Six-Decade Counter/Display Totalizer"**
(MK50395)
Covers circuit operation and input/output requirements. Describes use in a batch control system, a position measurement system and greater than-less than detection.
Mostek (8 pg.)

20 **"Programmable Counters Using the MC10136 and MC10137 MECL Universal Counters"**
(MC10136, MC10137)
Circuit operation and use in programmable counters with no external gating. Also use in high-frequency counters operating up to 110 MHz.
Motorola AN-584 (4 pg.)

21 **"Battery-Powered 5 MHz Frequency Counter"**
Describes a battery operated 5 MHz counter built with CMOS for low power operation. Discusses methods to minimize power consumption.
Motorola AN-717 (9 pg.)

©IC MASTER 1978

DIGITAL

Counters (cont)

1 **"Five Digit Accumulator/Elapsed Time Indicator"**
(MC14534)
Describes in detail the circuit for a CMOS 5 digit elapsed time indicator and a 99,999 count accumulator with a 1-999 prescaler.
Motorola AN-743 (5 pg.)

2 **"The Logical Design of Shift Counters"**
Presents two techniques to aid in designing shift-register counters. Gives results for "sequence tree" and "count multiplication" techniques for cycle lengths of 30 or less. Shows solutions for both "D" flip-flops and J-K flip-flops as the input elements of the shift register.
Motorola AN-576 (8 pg.)

3 **"An MSI 500 MHz Frequency Counter Using MECL and MTTL"**
See listing under High Speed Logic. (Motorola)

4 **"Calculator Chip Makes A Counter"**
(MM5736, MM5739)
Discusses use of the MM5736 calculator chip as a counter operating up to 120 Hz.
National AN-112 (6 pg.)

5 **"Keyboard Programmable Divide-by-"N" Counter with Symmetrical Output"**
(MM54C922, MM74C922)
Describes a circuit to divide by 1 through 16 by pushing a single key for each division ratio.
National DB-5 (2 pg.)

6 **"Design of Fixed and Programmable Counters Using the RCA 4018A COS/MOS Presettable Divide-by-"N" Counter"**
(CD4018)
Describes the use of this device in single-decade and multi-decade fixed and programmable divided-by-"N" counters. System considerations, such as switch simplifications, components minimization, and speed are also discussed.
RCA ICAN-6498 (6 pg.)

7 **"ECL High Speed Counters"**
Discusses design considerations when constructing high speed counters using the TI ECL 2500 Series.
Texas Instruments Application Report CA-147 (8 pg.)

8 **"Using the SN74160 Family of Synchronous Counters"**
(SN74160, SN74161, SN74162, SN74163)
Describes carry circuit operation, cascading and programming.
Texas Instruments Application Report CA-174 (7 pg.)

Data Transmission

9 **"Line Drivers and Receivers"**
(AM2614, AM2615, 9614, 9615, 9620, 9621, DM7831, DM8831)
Discusses single ended, differential, unbalanced differential digital communications systems and line matching methods. Describes the above circuits and their use in systems.
Advanced Micro Devices Application Note (12 pg.)

10 **"Remote Multiplexing"**
Discusses acquisition of data at sensors distant from the location where the data is required and the control of actuators at a distance from the control system. Topics include interconnection, data transmission integrity, temperature, and electrical and mechanical protection.
Burr Brown AN-80 (6 pg.)

Data Transmission (cont)

11 **"Distributed Data Processing"**
Outlines design considerations dealing with remote data acquisition systems. Discusses distributed data processing and related topics such as system reliability, maintenance, network configurations and partitioning, and data base management.
Burr Brown AN-81 (5 pg.)

12 **"Intrinsically Safe Data Acquisition"**
See listing under (Digital) CMOS (Burr-Brown)

13 **"Stable FSK Modems Featuring the XR-2207, XR-2206, and XR-2211"**
(XR2206, XR2207, XR2211)
Describes designing a modulator-demodulator for use in frequency-shift keying. Circuit designs and the adjustment procedure for frequency tuning is included.
Exar AN-01 (5 pg.)

14 **"Using the Data Concentrator in Data Communications"**
(AY1016)
Describes counter, decoding matrix, and multiplexer switch sections of the AY5-1016 data concentrator. Describes commutator.decommutator and polling system applications plus use as a digitally programmable gain amplifier, and as a clock generator.
General Instrument Microelectronics (11 pg.)

15 **"The AY-5-1011 Terminal Transmitter for Key-To-Tape Data Accumulation System and Other Applications"**
(AY5-1011)
Describes features of this parallel-to-serial converter and discusses its use in key-to-tape systems.
General Instruments Microelectronics (6 pg.)

16 **The UAR/T in Data Communications**
(AY5-1013)
Describes this full duplex receiver/transmitter and discusses its application in computer, terminal and slow speed device interfacing. Also covers use in polling.
General Instrument Microelectronics (4 pg.)

17 **"High Speed Digital Communications"**
(HD245, HD246, HD545, HD546)
Describes the use of the HD-245 family in a current mode digital communication system (up to 2 Mbs over 1,000-ft-long line.)
Harris Application Note 205 (4 pg.)

18 **"Receiver/Transmitter Noise Immunity"**
(HD245, HD246, HD545, HD546)
Discusses HD-245 transmitter/receiver system noise: External magnetic and capacitive effects, crosstalk, and ground line noise. Includes a comparison with voltage mode and differential voltage switching type systems.
Harris Application Note 207 (4 pg.)

19 **"Using the 8251 Universal Synchronous/Asynchronous Receiver/Transmitter"**
(8251)
Describes this USART, covering its use as a component and as a communication-link in 8080 systems. Includes flowcharts and program listings.
Intel Application Note AP-16 $1.00 (32 pg.)

20 **"Bussing with MECL 10,000 Integrated Circuits"**
(MC10111, MC10123)
Describes use of MECL 10,000 circuits in high speed data transmission systems with emphasis on transmission line construction and termination.
Motorola AN-726 (6 pg.)

Data Transmission (cont)

1 **"Low Speed Modem Fundamentals"**
(MC6860)
Describes interface circuitry and performance of the MC6860 low speed modem. Evaluation of the system performance in the presence of Gaussian noise is given, as well as a brief description of data couplers.
Motorola AN-731 (15 pg.)

2 **"Low Speed Modem System Design Using the MC6860"**
(MC6860)
Describes the MC6860 modem. Provides filter design tables and equations to develop a complete 100 series compatible system.
Motorola AN-747 (13 pg.)

3 **"Device Operation and System Implementation of the Asynchronous Communications Interface Adapter (MC6850)"**
(MC6850)
Provides information on ACIA transmitter and receiver operation, initialization, status register bits, use in a microcomputer based communications system, software requirements, and transmission subroutines.
Motorola AN-754 (11 pg.)

4 **"Integrated Circuits for Digital Data Transmission"**
(DS7820, DS7830, DS8820, DS8830)
Describes the operation and use of the DS7830 line driver and DS7830 line receiver for transmission systems using twisted-pair lines. Includes a mathematical design analysis of this line receiver.
National AN-22 (16 pg.)

5 **"Data Bus and Differential Line Drivers and Receivers"**
(DS7820, DS7830, DS7831, DS7832, DS7833, DS7834, DS7835, DS7836, DS7837, DS7838, DS7839, DS8820, DS8830, DS8831, DS8832, DS8833, DS8834, DS8835, DS8836, DS8837, DS8838, DS8839, DS1488, DS1489)
Includes schematics and describes the operation of these line drivers, receivers and transceivers.
National AN-83 (12 pg.)

6 **"Transmission Line Characteristics"**
(DM7400, DS7820, DS7830, DS75452, DS8820, DS8830)
Describes the characteristics of digital signals in transmission lines and the characteristics of the line that effect transmission quality. Also compares the performance of unbalanced and balanced circuits in digital systems.
National AN-108 (6 pg.)

7 **"Operational Aspects of Nitron's Data Terminal Transmitter and Receiver"**
(NC2257, NC2259, NC2260)
Discusses basic operation of the NC2257/2259/2260 IC's, and application in various types of communications systems.
Nitron Communications Note 1 (24 pg.)

8 **"Using High Speed Memory in Pulse Code Modulated Systems for Switching Applications"**
Discusses digital message switching and implementation with a conventional digital crossbar switch as well as with a switch using high speed memory and data multiplexing.
Nortec Applications Note, No. 29 (4 pg.)

9 **"Transmission and Multiplexing of Analog or Digital Signals Utilizing the CD4016A Quad Bilateral Switch"**
(CD4016A)
Describes features and operation of this switch. Discusses applications, including switching, gating digital or analog signals, multiplexing and demultiplexing, D/A conversion, sample and hold, and squelch-control.
RCA ICAN-6601 (12 pg.)

Data Transmission (cont)

10 **"A COS/MOS PCM Telemetry and Remote Data Acquisition Design"**
See listing under (Digital) CMOS (RCA)

11 **"A Typical Data-Gathering and Processing System Using CD4000A-Series COS/MOS Parts"**
See listing under (Digital) CMOS (RCA)

12 **"Data Transmission with SN55107 Series"**
(SN55107, SN55108, SN55109, SN55110, SN75107, SN75108, SN75109, SN75110)
Demonstrates the use of these line drivers and receivers in solving two multiplexing problems: a party line addressing system; and data/clock signals in a bipolar line. Receiver and driver characteristics are provided.
Texas Instruments Application Report CA-146 (8 pg.)

13 **"Asynchronous Receiver/Transmitter"**
(TR1602)
General description of asynchronous transmission and operation of TR1602, which is capable of full or half duplex operation. Describes application in distributed computer networks.
Western Digital Application Report 1 (12 pg.)

Encoders

14 **"Using the AY-5-9100 in Telephone Equipment"**
(AY5-9100)
Describes use of this four phase dynamic logic circuit in mains powered dialers, line powered telephones, card readers, and in standard multifrequency tone dialer keyboards.
General Instrument Microelectronics (10 pg.)

15 **"Designing with the HD-0165 Keyboard Encoder"**
(HD0165)
The organization and truth table for this encoder are presented. The use of two circuits for encoding up to 256 keys, battery operation, examples of a teletypewriter keyboard and universal keyboard encoders are described.
Harris Application Note 204 (8 pg.)

16 **"Using the MM5704 Keyboard Interface in Keyboard Systems"**
(MM5704)
Discusses features, operation, and programming of this device. Discusses use with the MM5702 timing and control chip of the Microprogrammable Arithmetic Processing System, and in a standard ASCII encode system.
National AN-52 (11 pg.)

17 **"MOS Encoder Plus PROM Yield Quick Turnaround Keyboard Systems"**
(MM5740)
Describes use of a binary coded keyboard encoder with a PROM to build prototype or small volume keyboard systems.
National AN-139 (4 pg.)

©IC MASTER 1978

DIGITAL

Encoders (cont)

1 **"Exclusive-OR Code Converters"**
(DM7086)
Covers use of exclusive-OR gates to do Gray/Binary and Binary/Hamming code conversion.
National DB-2 (2 pg.)

2 **"Interface Circuitry and Performance Optimization TMX2141 Encoder, TMX2151 Decoder"**
(2141, 2151)
Provides design notes including pulse width and timing considerations for these pulse width signalling devices.
TMX Bulletin 751 (7 pg.)

General

3 **"Don't Be Confused by Switching Time Specifications"**
Uses a TTL J-K flip-flop to explain switching time specifications.
Advanced Micro Devices (4 pg.)

4 **"MOS 100-Bit Word Generator"**
Describes how to build a 100-bit word generator using MOS ICs.
National MB-1 (2 pg.)

5 **"MOS Clock Savers"**
Design and use of MOS Clock-Drive Networks. Offers tips for saving power and lowering component costs.
National MB-5 (2 pg.)

6 **"Solid-State Devices Manual"**
Provides tutorial information on discrete devices and IC's with emphasis on consumer, hobbyist and experimenter applications.
RCA SC-16 $5.00 (750 pg.)

7 **"Criteria for Choosing Resins and Evaluation Tests for Discrete and Integrated Power Devices in Plastic Packages"**
See listing under (Linear) General (SGS-ATES)

High Speed Logic

8 **"F10,000 Series ECL"**
(ECL Series)
Operation and circuit parameters are described for the Fairchild ECL series.
Fairchild Application Note 330 (6 pg.)

9 **"IC Crystal Controlled Oscillators"**
(MC1023, MC1662, MC10101, MC10116)
Describes use of MC1023 OR/NOR gate as an amplifier and oscillator. Discusses square wave oscillator circuits with crystal control capable of output frequencies up to 150 MHz. Examples use MC10116/10101, and MC1662.
Motorola AN-417B (4 pg.)

10 **"High Speed Monostable Multivibrators Designed with MECL Integrated Circuits"**
(MC1023, MC1026)
Discusses two configurations using the MC1023 clock driver and a delay element that offer performance in excess of 70 MHz and pulse widths of 4 nanoseconds. Covers methods of obtaining the delay.
Motorola AN-418 (5 pg.)

High Speed Logic (cont)

11 **"The MC1600 Series MECLIII Gates"**
(MC1660, MC1661, MC1662, MC1663, MC1664, MC1665)
Gives typical operating characteristics and explains the operation of various gates in the MECL III family. Describes recommended layout, breadboarding, and testing procedures.
Motorola AN-504 (14 pg.)

12 **"Interconnection Techniques for Motorola's MECL 10,000 Series Emitter Coupled Logic"**
(MECL)
Describes some of the characteristics of high digital signal lines and gives wiring rules for MECL 10,000 circuits. Discusses p-c board interconnects, board-to-board interconnects, and wirewrapping techniques.
Motorola AN-556 (22 pg.)

13 **"Using Shift Registers as Pulse Delay Networks"**
(MC10135)
Discusses a high-speed delay shift register using the MC10135 flip flop.
Motorola AN-565 (3 pg.)

14 **"MECL Positive and Negative Logic"**
(MECL)
Describes equivalences between positive and negative ECL logic and provides guides for converting between them.
Motorola AN-567 (2 pg.)

15 **"Testing MECL 10,000 Integrated Logic Circuits"**
(MECL)
Describes AC and DC tests in a 50 ohm transmission-line environment for measuring logic levels or noise margins, circuit current, input currents, propagation delays, edge speeds, and flip-flop toggle rates.
Motorola AN-579 (6 pg.)

16 **"An MSI 500 MHz Frequency Counter Using MECL and MTTL"**
(MECL)
Describes design of 8-digit LED readout counter using MECL III, 10,000 and TTL. Discusses two prescalers using MECL, two input amplifier designs, and a time-base controller for the counter's multiphase clock.
Motorola AN-581 (9 pg.)

17 **"Measure Frequency and Propagation Delay with High Speed MECL Circuits"**
(MECL)
Describes ECL frequency counter useful to 160 MHz and a propagation delay measuring circuit capable of 100-picosecond resolution.
Motorola AN-586 (2 pg.)

18 **"AC Noise Immunity of MECL 10,000 Integrated Circuits"**
(MECL)
Discusses AC noise immunity. Describes test circuits for measuring this immunity and the results to be expected for MECL 10,000 circuits.
Motorola AN-592 (6 pg.)

19 **"Simulate MECL System Interconnections with a Computer Program"**
Develops a basic computer program that allows the user to simulate the performance of signal lines and to analyze termination techniques. Applies to ECL and other high speed digital systems.
Motorola AN-700 (10 pg.)

High Speed Logic (cont)

1 **"Understanding MECL 10,000 DC and AC Data Sheet Specifications"**
(MECL)
Discusses basic MECL 10,000 gate structure, transfer curve and dc levels. Covers specifications data sheet, including power supply drain current, high and low output voltages, propagation delay, rise and fall times, and toggle frequency.
Motorola AN-701 (7 pg.)

2 **"MECL 10,000 Arithmetic Elements MC10179, MC10180, MC10181"**
(MC10179, MC10180, MC10181)
Describes 10180 dual adder/subtractor, 1018 4-bit arithmetic logic unit/function generator, and 10179 lookahead carry block. Discusses their operation in parallel adders, in both ripple and look-ahead systems.
Motorola AN-709 (11 pg.)

3 **"Interfacing with MECL 10,00 Integrated Circuits"**
(MC1650, MC1692, MC10115, MC10116, MC10124, MC10125, MC-10128, MC10129, MC10216)
Discusses circuits to interface ECL with TTL, TTL and IBM busses, MOS, low level signals, and LEDs.
Motorola AN-720 (9 pg.)

4 **"A High Speed FIFO Memory Using the MECL MC1143 Register File"**
(MCM10143)
Describes the required features of a high speed FIFO design. Different approaches are compared and a design is shown using the MC10143 Multiport Register File.
Motorola AN-730 (6 pg.)

5 **"Bussing with MECL 10,000 Integrated Circuits"**
See listing under (Digital) Data Transmission (Motorola)

High Speed TTL

6 **"The MC3000/MC3100 Series Transistor-Transistor Logic Flip-Flops"**
(MC3050, MC3051, MC3052, MC3060, MC3061, MC3062, MC3150, MC3151, MC3152, MC3160, MC3162)
Describes basic operation of the various flip-flops available in the MC3000/3100 (54H/79H) series and gives typical operating characteristics of each.
Motorola AN-493 (14 pg.)

7 **"Series 54S/74S Schottky TTL Applications"**
(SN54S Series, SN74S Series)
Analyzes Schottky clamping techniques and circuits, reviews circuit performance, including discussion of transfer characteristics, switching times, and a-c noise. Discusses power supply considerations, line driving and receiving, noise sources and their abatement. Normalized loading/driving capability information and the pinouts of ICs are discussed.
Texas Instruments Application Report CA-176 (45 pg.)

HNIL/HTL

8 **"Noise Immunity with Motorola High Threshold Logic"**
(MC660 Series)
Compares noise immunity characteristics between High Threshold Logic (HTL) and standard saturated logic devices. Discusses noise injection and noise reduction techniques.
Motorola AN-298 (5 pg.)

9 **"Operation and Application of MHTL J/C Flip-Flops"**
(MC663, MC664)
Describes operation and characteristics of the J-K MC663P and the master-slave R-S MC664P flip-flops. Discusses applications as ripple and decade shift counters.
Motorola AN-414 (8 pg.)

10 **"Using Motorola High Threshold Logic"**
(MC660 Series)
Describes MC660 series ICs and provides many of the characteristics of these units. Application examples include logic translation, line driving, and trigger circuits.
Motorola AN-467 (11 pg.)

11 **"Converting Relay Control Systems to Digital I/C's"**
(MC660 Series)
Defines and discusses basic Boolean algebra and logic functions and presents method of converting relay diagrams to logic diagrams. Gives examples of conversion method using High Threshold Logic circuits and presents a system design to accomplish this.
Motorola AN-524 (11 pg.)

12 **"Design Techniques with HiNIL 367 Quad Schmitt Trigger"**
(367)
General discussion of Schmitt Trigger and the differences of the 367, which ignores open inputs and offers 3.5v noise immunity. Applications include line receivers, pulse stretchers, ac detectors, free-running and voltage-controlled oscillators.
Teledyne Semiconductor HiNIL Application, Note 2, (4 pg.)

13 **"Designing Programmable Controllers with HiNIL"**
(380)
Applications of the HiNIL 380 BCD to decade decoder including the generation of odd sequences of output pulses, the controlling of more than one load, and the switching on and off of loads.
Teledyne Semiconductor Digital Microcircuits Application, Note 3 (4 pg.)

14 **"HiNIL 375 Universal Shift Register"**
(375)
Operation and applications of this synchronous 4-bit device as a 4 and 8-bit shift-left, shift-right register, 7 and 8-bit parallel-to-serial and serial-to-parallel converters and various counters.
Teledyne Semiconductor HiNIL Application Note 4 (10 pg.)

15 **"High Noise Immunity Logic — Powerful, Versatile, and Growing"**
(300 Series)
Generally describes the HiNIL family use and features. Covers interface to other families, noise immunity, operating considerations and input protection.
Teledyne Semiconductor Digital Application Note 5 (5 pg.)

©IC MASTER 1978

DIGITAL

HNIL/HTL (cont)

1 **"The HiNIL 347-A Dual Retriggerable One Shot with High Noise Immunity"**
(347)
Description and application details for this device are provided along with diagrams showing its use in pulse generators, coincidence detectors, frequency dividers, voltage to frequency and frequency to voltage converters, a pulse absence detector and an ac line presence detector.
Teledyne Semiconductor Digital Application Note 6 (6 pg.)

2 **"High Noise Immunity Logic"**
(300 Series)
Discussion includes noise immunity, loading rules, fanout, passive pull-up loading, collector or-ing, second level gating, driver pull-up, system interfaces.
Teledyne Semiconductor Digital Catalog (7 pg.)

3 **"Combining HNIL and CMOS — An Optimum Design Technique"**
See listing under (Digital) Interface (Teledyne Semiconductor)

I^2L

4 **"Custom IC Design Using I^2L Technology"**
(XR-IIL-CHIP)
Compares I^2L to other technologies. Describes design procedure for linear and digital circuits using master chips.
Exar (5 pg.)

Interface

See also Decoders.

5 **"Digital Display Systems"**
Discusses decoding, format, multiplexing, zero suppression for LED, LCD, incandescent, fluorescent and gas discharge displays.
Fairchild Application Note 212/2 (24 pg.)

6 **"9616/9617 EIA Interface Driver and Receiver"**
(9616, 9617)
Gives performance characteristics for these devices and describes their use in data communications equipment. Describes EIA standard RS232-C.
Fairchild Application Note 320 (6 pg.)

7 **"The Interface Handbook, Line Drivers and Receivers"**
(9612, 9613, 9614, 9615, 9616, 9617, 9627, 9634, 9635, 9636, 9637, 9638, 9640, 8T13, 8T14, 8T23, 8T24, 55107, 55108, 55109, 55110, 55121, 55122, 75107, 75108, 75109, 75110, 75112, 75121, 75122, 75123, 75124, 75154, 75207, 75208)
This comprehensive book covers the basics of transmission line theory along with methods for determining signal quality. Major chapters are titled: Data Transmission Lines and their Characteristics; Reflections, Computations and Waveforms; Long Transmission Lines and Data Signal Quality; and Forms of Operation (single/differential, direction of flow, analysis of common interfaces, etc.)
Fairchild Interface Handbook (118 pg.)

8 **"ASCII Bus Interface Logic Uses IM5200 FPLA"**
(IM5200)
Explains ASCII interface bus and how IM5200 provides discrete logic and address storage required by it.
Intersil Application Bulletin MB002 (6 pg.)

Interface (cont)

9 **"Semiconductors for Plated-Wire Memories"**
(MC4006, MC4007, MC4038, MC4040, MC4043, MC1514, MC1546)
Discusses operation and electrical characteristics of plated wire memories. Covers applications of drivers, sense amplifiers, and decoders as interface circuits. Also discusses memory organization and memory-related semiconductor applications.
Motorola AN-533 (15 pg.)

10 **"Interface Techniques Between Industrial Logic and Power Devices"**
Presents worst case design approaches to illustrate methods of interfacing McMOS and MHTL logic to various ac and dc power load levels.
Motorola AN-712A (19 pg.)

11 **"Interface Considerations for Numeric Display Systems"**
(MC14511, MC14543)
Gives basic information on LCD, LED, gas discharge, fluorescent and incandescent displays. Discusses interfacing 7 segment displays to logic with emphasis on multiplexed systems.
Motorola AN-741 (25 pg.)

12 **"Interfacing with MECL 10,000 Integrated Circuits"**
See listing under (Digital) High Speed Logic (Motorola)

13 **"MM54C/MM74C Voltage Translation/Buffering"**
(MM54C901, MM54C902, MM54C903, MM54C904, MM74C901, MM74C902, MM74C903, MM774C904)
Interfacing PMOS to CMOS, CMOS to CMOS with different voltage levels, and CMOS to two standard TTL loads are illustrated using 74C901 series devices.
National MB-18 (2 pg.)

14 **"Driving 7-Segment LED Displays with National Semiconductor Circuits"**
(DM5446A, DM5447A, DM5448A, DM7446A, DM7447A, DS75491, DS75492, DS7856, DS7858, DS8856, DS8857, DS8858, DS8861, DS8863, DS8864, DS8865, DS8866)
Discusses configurations and construction of 7-segment LEDs and drive modes. Describes BCD to 7-segment decoder drivers, BCD to 7-segment LED drivers, MOS to LED segment drivers, four and five segment drivers, as well as digit drivers. Describes calculator and digital clock applications.
National AN-99 (12 pg.)

15 **"Using the MM5704 Keyboard Interface in Keyboard Systems"**
See listing under (Digital) Encoders (National)

16 **"TTL/MOS/DTL Interfaces"**
Techniques for coupling the above devices and characteristics of the interfaces.
National MB-7 (2 pg.)

17 **"COS/MOS Interfacing Simplified"**
(CD4000 Series)
Covers interfacing 4000A and B series with TTL, DTL, ECL, NMOS, PMOS, industrial and power control circuits, op amps and displays.
RCA ICAN-6315 (7 pg.)

18 **"Applications of the RCA CD4093B COS/MOS Schmitt Trigger"**
See listing under (Digital) CMOS (RCA)

19 **"Interfacing COS/MOS with Other Logic Families"**
See listing under (Digital) CMOS (RCA)

Interface (cont)

1 **"Interfacing with CMOS"**
See listing under (Digital) CMOS (Solid State Scientific)

2 **"Completely Monolithic IC Series for Gas Discharge Display Interface"**
(UDN-6144, UDN-6164, UDN-6184, UDN-7183, UDN-7184, UDN-7186)
Describes operation of high voltage IC's to drive the digits and segments of 200v (Panaplex) gas discharge displays.
Sprague Electric Microcircuit Application Report MAR75-1 (8 pg.)

3 **"Expanding the Frontiers of IC Interface for Electronic Displays"**
Presents interface IC basics concerning incandescent, gas discharge, LED, plasma, fluorescent, and hot wire displays.
Sprague Electric (10 pg.)

4 **"Using Bipolar Logic to Improve Performance in CMOS and Microprocessor Systems"**
Suggests the use of HiNIL for improving noise performance, input protection, and output drive, and of LP Schottky for improved speed/power.
Teledyne Semiconductor Digital Application Note 7 (4 pg.)

5 **"Combining HNIL and CMOS — An Optimum Design Technique"**
(300 Series)
Discusses noise immunity, HNIL/74C interface, Schmitt trigger input and high current output.
Teledyne Semiconductor Digital Catalog (3 pg.)

6 **"TTL to MOS and MOS to TTL Interface Circuits"**
(SN7400, SN75107, SN75207, SN75270, SN75370, SN75450, SN-75451, TMS1103, TMS4062)
Describes MOS/TTL interface circuits using bipolar transistors, JFETS, MOSFETS, and ICs.
Texas Instruments Application Report CA-170 (11 pg.)

LSI, General

7 **"Design of Custom LSI Circuitry for Modern Digital Systems"**
Discusses design of LSI devices. Covers size considerations, numbers of input/output connections, number of output drivers, use of repetitive patterns, use of computer aided design techniques, speed versus size and power, and interfacing.
General Instrument Microelectronics (7 pg.)

Multiplexers

8 **"TTL MSI Multiplexers and Demultiplexers"**
(DM7210, DM7842, DM8210, DM8842)
Describes features of DM7210 multiplexer and DM7842 demultiplexer and discusses their use in a synchronous digital data transmission system, a keyboard entry decoder, and as minterm generators.
National AN-37 (8 pg.)

PLAs

9 **"How to Design with Programmable Logic Arrays"**
(DM8575, DM8576)
Discusses operation of PLAs and use as code converters, decode elements in digital processors and sequential controllers.
National AN-89 (8 pg.)

10 **"MOS Programmable Logic Arrays"**
(TMS2000 Series, TMS2200 Series)
Describes TMS2000 and TMS2200 Series programmable logic arrays. Describes their internal logic and operations. Provides ordering instructions.
Texas Instruments Application Report CA-158 (13 pg.)

Pulse Handling

11 **"Nanosecond Pulse Handling Techniques in I/C Interconnections"**
Discusses problems of pulse transmission and measurement for TEM mode on coax, stripline, and above-ground wire systems.
Motorola AN-270 (6 pg.)

Trigger Circuits

12 **"Advantages of the AM26123 Compared with the AM54/74123"**
(AM26123, SN54123, SN74123)
Discusses changes in the pulse width circuits and the addition of on output latch.
Advanced Micro Devices Application Brief (4 pg.)

13 **"CMOS Schmitt Triggers"**
(MC14093B, MC14583B, MC14584B)
Operating characteristics, theory of operation, and Schmitt trigger applications are covered for digital logic systems.
Motorola AN-768 (8 pg.)

14 **"1.3 Volt IC Flasher, Oscillator, Trigger, or Alarm"**
See listing under (Linear) Timers (National)

15 **"Series ULN-3300M Schmitt Trigger Integrated Circuits — Typical Applications and Operation"**
(ULN-3303, ULN-3304, ULN-3305, ULN-3306)
Describes device and use in multivibrators, switches, timers, and more.
Sprague AN-27450.19

16 **"Design Techniques with HiNIL 367 Quad Schmitt Trigger"**
See listing under (Digital) HNIL/HTL (Teledyne Semiconductor)

17 **"The HiNIL 347 — A Dual Retriggerable One Shot with High Noise Immunity"**
See listing under (Digital) HNIL/HTL (Teledyne Semiconductor)

©IC MASTER 1978

DIGITAL

TTL, General

1 **"Medium Scale Integration in the Numerical Control Field"**
(MC4016, MC4018, MC4024, MC4044, MC4324, MC4344)
Discusses operation of MC4016 decade programmable cascadeable counter, MC4324/4024 dual voltage controlled multivibrator, and MC4344/4044 frequency phase detector. Describes applications of these devices in audio frequency comparator, frequency synthesizer, and motor speed control circuits.
Motorola AN-541 (10 pg.)

2 **"TTL Integrated Circuits — Applications of MSI Devices"**
Covers counters, modulo-N dividers, decoders, switches, adders, comparators, parity generators, shift registers and bus-ORable flip-flop. Describes many applications, including up/down counters, a stepping waveform generator, shift registers, frequency synthesizers, digital data demultiplexer, analog commutator, minterm generator, ripple carry parallel adder and tape position locator.
National AN-36 (23 pg.)

3 **"Tri-State Logic in Modular Systems"**
(DS7831, DM8093, DM8094, DM8214, DM8230, DM8551, DM8552, DM8598, DS8831, DM8840, DM8842, DM8846)
Discusses output drive characteristics, logical control, safety factors in Tri-State Logic circuits. Describes applications, including complex switching functions, driving and transmitting, multiplexing, data storage, decoding, and data manipulation.
National AN-43 (16 pg.)

4 **"Characteristics and Applications of Tri-State IC's"**
~~(DM7093, DM7490, DM7214, DM7230, DM7551, DM7598, DS7831,~~ DS8831)
Describes application of the general configuration of the Tri-State logic family and discusses application of the following: quad bus-buffer gates, dual 4:1 multiplexer, demultiplexer and bus-interchange switch, quad-D flip-flop, expandable 256-bit ROM, and quad driver.
National AN-45 (12 pg.)

5 **"Tri-State Logic in High Speed Memories of Microprogrammed Computers"**
(DM8551)
Discusses tri-state logic in general and its use in scratchpad memories. Covers storage of microinstructions and program constants in high-speed ROMs.
National AN-47 (5 pg.)

6 **"Tri-State Logic Applied in a Computer System Can Reduce System Cost and Provide Added Performance"**
(DM8556)
Analyzes Tri-State characteristics using the DM8556 counter/register as an example. Shows how performance of PDP-8 can be improved using TSL.
National AN-73 (7 pg.)

LINEAR

Active Filters

7 **"Function Circuits, Design and Applications"**
See listing under (Linear) General (Burr-Brown)

8 **"Active Filter Design Handbook"**
(UAF7000, ACF7032, ACF7092, ACF7096)
Covers designing with universal building blocks, effects of op amp performance on state-variable filters and design of an elliptic active RC filter.
General Instrument $4.50 (48 pg.)

9 **"High Q Notch Filter"**
(LM102, LM202, LM302)
Describes use of LM102 connected to a twin "T" network to form a high Q, 60 Hz notch filter.
National Linear Applications Handbook, Vol. I LB-5 (2 pg.)

Amplifiers, Current

10 **"Application of the LH0002 Current Amplifier"**
(LH0002)
Circuit operation. Describes uses in a differential input-output op amp, booster amplifier, level shifter, pulse transformer driver, and transmission line driver.
National AN-13 (4 pg.)

Amplifiers, Instrumentation

11 **"AD520 Monolithic Instrumentation Amplifier"**
(AD520)
Describes performance of this instrumentation amplifier. Covers application as a bridge amplifier, ground loop eliminator, and floating measurement amp. Appendix compares instrumentations amplifier to several multiple op amp circuits.
Analog Devices (6 pg.)

12 **"Instrumentation Amplifiers — Versatile Differential Input Gain Blocks"**
(3660, 3670)
Describes the features and general operation of instrumentation amplifiers. Depicts their use in bridge circuits, in reducing ground loop interference, and in driven guard input circuits.
Burr-Brown AN-75 (6 pg.)

13 **"Optical Coupling Extends Isolation-Amplifier Utility"**
(3450, 3650)
Explains isolation amplifier fundamentals, optical coupling, and use of the amp in medical electronics and industrial motor control.
Burr-Brown AN-85 (8 pg.)

14 **"Instrumentational Amplifiers"**
(LM114, LM118)
Discusses general purpose instrumentation amplifier, using LM114 matched transistors ahead of an LM118 op amp that is optimized for wide bandwidth.
National Linear Application Handbook, Vol. II, LB-21 (2 pg.)

15 **"Instrumentation Amplifier"**
(LM101A, LM102, LM107)
Describes a differential-input instrumentation amplifier using LM102 and LM107 and variable gain version that also uses LM101A.
National Linear Applications Handbook, Vol. I LB-2 (2 pg.)

Amplifiers, Instrumentation (cont)

1 **"OP-10 Instrumentation Amplifier CMRR Versus Frequency Improvement"**
(OP-10)
Discusses optimization of CMRR versus frequency response of a three op amp instrumentation amplifier.
Precision Monolithics AB-2 (1 pg.)

2 **"Application of the RCA CA3000 Integrated-Circuit DC Amplifier"**
(CA3000)
Describes circuit and application as modulated oscillator, crystal oscillator, low-frequency mixer, cascaded RC-coupled feedback amp, narrow-band tuned amp, and Schmitt trigger.
RCA ICAN-5030 (11 pg.)

3 **"The Instrumentation Amp vs the Op Amp: Which, Where, and How to Use Them"**
Compares an op amp connected as a differential amp with an instrumentation amp built from several general purpose op amps. Discusses how to put each one together, and when and where to use them.
Teledyne Philbrick AN-29 (6 pg.)

Amplifiers, Operational

4 **"An IC Amplifier User's Guide to Decoupling, Grounding, and Making Things Go Right for a Change"**
Contains considerable information on good grounding practices and op amp decoupling.
Analog Devices Application Note (8 pg.)

5 **"AD513, AD516, IC FET Input Operational Amplifiers"**
(AD513, AD516)
Describes the circuit and operation. Applications include: comparator, precision clipper, current-to-voltage converter, and a timer.
Analog Devices Technical Bulletin (4 pg.)

6 **"Applying the AD504 Precision IC Operational Amplifier"**
(AD504)
Describes this amplifier and offers notes on its noise, thermal and dynamic performance. Applications: instrumentation amplifier, stable reference regulator, instrument input amplifier and high gain ac amplifier.
Analog Devices Technical Bulletin (7 pg.)

7 **"High Speed Op Amps — How Fast is Fast?"**
Comments on op-amp characteristics, including slew rate, settling time, stability and phase margin.
Analog Devices Reprint (6 pg.)

8 **"IC FET Input Operational Amplifiers"**
(AD503, AD506)
Describes these devices and their circuit characteristics. Applications: triangle and square wave generator, charge amplifier, track and hold amplifier, D.C. voltmeter, peak rectifier, bridge amplifier and current-to-voltage converters.
Analog Devices Technical Bulletin (6 pg.)

9 **"Protect Op Amps from Overloads"**
Discusses protection from power-supply faults, keeping input voltages at safe levels, and limiting output currents.
Burr-Brown AN-60 (3 pg.)

Amplifier, Operational (cont)

10 **"Combine Two Op Amps to Avoid the Speed Accuracy Compromise"**
(3521)
Discusses interconnecting low drift and wideband op amps to form a composite op amp.
Burr-Brown AN-64 (2 pg.)

11 **"Check Five Op Amp Specs in One Test"**
Describes a test circuit that generates signals providing measurements of open loop gain, offset voltage, input bias current, quiescent current, and output voltage swing.
Burr-Brown AN-65 (1 pg.)

12 **"Using Op Amps in Low Noise Applications"**
Discusses shot noise and noise from source resistances.
Burr-Brown AN-68 (2 pg.)

13 **"Design of a Unique Precision Controlled Current Source"**
(3500)
Diagrams a current source using an op amp and a complementary FET pair to form a current source with differential input and bipolar current output.
Burr-Brown AN-74 (2 pg.)

14 **"Designing with Operational Amplifiers: Application Alternatives"**
Amplifier improvement techniques, signal analyzers, signal conditioners, absolute value circuits, signal generators, computing circuits, data transmission circuits, as well as test and measurement circuits are discussed. Circuit designs and explanations of circuit operation are provided.
Burr-Brown $21.25 (220 pg.)

15 **"Frequency Compensation Techniques for an Integrated Operational Amplifier"**
(μA702A)
Presents design techniques for frequency compensation of μA702A which are applicable to other IC operational amplifiers.
Fairchild Application Bulletin 117/2 (8 pg.)

16 **"The μA739 — A Low-Noise Dual Operational Amplifier"**
(μA739)
Describes the circuit and operating characteristics. Covers d-c circuit performance, low-frequency analysis, power consumption, noise, short-circuit protection, amplifier isolation, and compensation techniques.
Fairchild Application Note 175/1 (8 pg.)

17 **"The μA776, an Operational Amplifier with Programmable Gain, Bandwidth, Slew-Rate, and Power Dissipation"**
(μA776)
Describes methods for setting the master bias current, discusses amplifier frequency response as a function of this current. Discusses applications, including a 600 nanowatt amplifier, a low-cost sample and hold circuit, a current controlled oscillator, multiplexing, and phase shifting.
Fairchild Application Note 218 (5 pg.)

18 **"A Low Drift, Low Noise Monolithic Operational Amplifier for Low Level Signal Processing"**
(μA725)
Describes operation of μA725, which offers low offset drifts, low input currents, low noise performance, and massive open loop gain. Shows how to minimize offset voltage drift with temperature in IC operational amplifiers and how to improve the common-mode rejection.
Fairchild Application Note 277 (10 pg.)

©IC MASTER 1978

LINEAR

Amplifier, Operational (cont)

1 **"The μA715 — A Versatile High Speed Operational Amplifier"**
(μA715)
Describes application as an image orthicon head amplifier, general purpose video amplifier, 40dB high input impedance amplifier, and high speed sample and hold circuit.
Fairchild Application Note 265 (4 pg.)

2 **"Applications of the μA749 Dual Operational Amplifier"**
(μA749)
Describes applications as a dual level comparator, positive or negative peak detector, peak-to-peak detector, and as an offset null circuit.
Fairchild Application Note 268 (2 pg.)

3 **"The μA749 Dual Operational Amplifier"**
(μA749)
Discusses the circuit, input voltage range, latch-up, output voltage range, power dissipation, noise, separation, high frequency compensation, and output capability.
Fairchild Application Note 269 (8 pg.)

4 **"Applications of the μA741 Operational Amplifier"**
(μA741)
Describes applications of this amplifier as a unity gain voltage follower, integrator, differentiator, voltage regulator reference amplifier, high voltage regulated power supply control element, clipping amplifier, and a comparator.
Fairchild Application Note 289/1 (4 pg.)

5 **"An Improved Sample and Hold Circuit Using the μA740"**
(μA740)
Basic discussion of acquisition and hold times. Description of circuit using this op amp as the buffer amplifier.
Fairchild Application Note 297 (3 pg.)

6 **"Applications of the μA777"**
(μA777)
Discusses use of this operational amplifier as a pulse amplifier, Wein Bridge oscillator, variable gain differential amplifier, power amplifier.
Fairchild Application Note 300 (3 pg.)

7 **"Operational Amplifiers as Inductors"**
(μA777)
Includes derivation of equivalent circuit and necessary component values to obtain inductances from millihenries to kilohenries, using the μA777 as an example. Describes application in voltage controlled sinewave oscillators and in bandpass and notch filters.
Fairchild Application Note 321 (5 pg.)

8 **"Radiation Testing of Linear Microcircuits"**
See listing under (Linear) General (Fairchild)

9 **"HA-909 Operational Amplifier"**
(HA-909, HA-911)
Discusses applications as a unity gain breadboard op amp, servo preamplifier, high-Q bandpass filter, Wien bridge oscillator, and phase-delay filters.
Harris Application Note 501 (2 pg.)

10 **"HA-909 Operational Amplifiers Performance Tailoring"**
(HA-909, HA-911)
Discusses how to optimize HA-909's offset, power dissipation, bandwidth, large signal bandwidth, slew rate, transient response, and stability with reactive loads.
Harris Application Note 502 (3 pg.)

Amplifier, Operational (cont)

11 **"Automatic Phase Margin Testing"**
(HA-2600)
How to test op amps using an HA-2600 comparator, the 8405A vector voltmeter and a sweep generator.
Harris Application Note 504 (2 pg.)

12 **"A High Impedance Hysteresis Circuit"**
(HA-2520, HA-2620)
Describes HA-2520/HA-2620 used as a hysteresis amplifier and covers output voltage limiting.
Harris Application Note 505 (2 pg.)

13 **"Equivalent Input Noise Measurements on High Gain Monolithic Operational Amplifiers"**
(HA-709, HA-909, HA-2520, HA-2600)
Broadband noise versus bandwidth measurements for HA-709, 909, 2520, and 2600 op amps.
Harris Application Note 506 (2 pg.)

14 **"A Simple Function Generator Using Operational Amplifiers"**
(HA-2600, HA-2510)
Describes square and triangular waveform generator using HA-2600 and HA-2510 op amps.
Harris Application Note 507 (2 pg.)

15 **"Test Procedures for Operational Amplifiers"**
Circuit for measuring offset voltage, bias current, offset current, open loop voltage gain, common mode and power supply rejection ratios, output voltage/current, power dissipation, and making continuity checks.
Harris Application Note 508 (2 pg.)

16 **"A Simple Comparator Using the HA-2620"**
(HA-2620)
Describes op amp comparator circuit capable of driving approximately ten logic gates.
Harris Application Note 509 (1 pg.)

17 **"A Simple Square-Triangle Waveform Generator"**
(HA-2510, HA-2600, HA-2620)
Circuit for waveform generator using three op amps.
Harris Application Note 510 (2 pg.)

18 **"The HA-2400 PRAM Four Channel Operational Amplifier"**
(HA-2400, HA-2405)
This is a programmable input stage, operational amplifier. This note describes its applications including an analog multiplexer with buffered input and output, an inverting or non inverting amplifier with a programmable gain, a sine wave oscillator with programmable frequency, and a track and hold/sample and hold circuit.
Harris Application Note 514 (8 pg.)

Amplifier, Operational (cont)

1 **"Operational Amplifier Stability: Input Capacitance Considerations"**
(HA-2600, HA-2605)
Discusses overcoming stray capacitance in op amps, such as the HA-2600.
Harris Application Note 515 (2 pg.)

2 **"The HA-2530/2535 Wideband High Slew Inverting Amplifier"**
(HA-2530, HA-2535)
Briefly discusses internal circuit. Shows how closed-loop frequency response can be predicted. Describes application as a fast settling coaxial driver, a 10 MHz coaxial line driver, a wide range signal separator, a high frequency triangular wave generator, and a current-to-voltage converter.
Harris Application Note 516 (11 pg.)

3 **"Applications of a Monolithic Sample-and-Hold/Gated Operational Amplifier"**
(HA-2420, HA-2425)
Describes HA-2420/2425 circuit. Applications include various track-and-hold/sample-and-hold configurations, an A/D converter, a demultiplexer, an integrated-hold-reset amplifier, a gated operational amplifier, and a peak detector with reset.
Harris Application Note 517 (8 pg.)

4 **"The HA-2900 Monolithic Chopper Stabilized Amplifier"**
(HA-2900)
Discusses offset voltage and current drift and chopper stabilization, then describes the circuit. Applications include a high impedance differential instrumentation amplifier, use as an integrator, and several wide bandwidth configurations.
Harris Application Note 518 (8 pg.)

5 **"Operational Amplifier Noise Prediction"**
Provides a noise model, a procedure for computing output noise, and spot noise curves for many Harris amplifiers.
Harris Semiconductor AN-519 (10 pg.)

6 **"The 8007 — A High Performance FET-Input Operational Amplifier"**
(8007)
Circuit description, applications as log and antilog amplifiers, photocell amplifier, peak detector, sample and hold circuits, high impedance buffer, and Wien Bridge oscillator.
Intersil Application Bulletin A005 (6 pg.)

7 **"The 8043 — A Low Cost Dual FET-Input Operational Amplifier"**
(8043)
Summary of circuit characteristics. Applications as automatic offset suppression circuit, staircase generation, sample and hold circuit, and instrumentation amplifier.
Intersil application Bulletin A008 (6 pg.)

8 **"Single Power Supply Operation of IC Operational Amplifiers"**
(MC1430, MC1431, MC1433, MC1530, MC1531, MC1533, MC1709, MC1709C)
Describes a split zener biasing technique that permits the use of these operational amplifiers from a single power supply. Discusses general circuit as well as specific ac and dc device considerations to minimize operating and design problems.
Motorola AN-403 (3 pg.)

Amplifier, Operational (cont)

9 **"The MC1535 Monolithic Dual Operational Amplifier"**
(MC1435, MC1535)
Gives complete ac and dc circuit analysis and discusses electrical characteristics. Discusses applications in a differential input-differential output circuit configuration, and as a signal envelope detector. Describes an input compensation scheme for fast slew rate.
Motorola A-411 (9 pg.)

10 **"The MC1539 Operational Amplifier and its Applications"**
(MC1439, MC1539)
Discusses dc and ac operation and the performance of this amplifier. Describes a high frequency feed-forward scheme and application as a comparator, voltage follower, differential amplifier, and a summing amplifier.
Motorola AN-439 (22 pg.)

11 **"A Simple Technique for Extending Op Amp Power Bandwidth"**
(MC1433, MC1533)
Describes a method of reducing loop gain and using only as much compensation as needed to increase the power bandwidth. Cites the MC1533G as an example.
Motorola AN-459 (3 pg.)

12 **"Using Transient Response to Determine Operational Amplifier Stability"**
(MC1439, MC1539)
Describes a technique for evaluating the stability of any feedback amplifier configuration by analyzing its response to a step-function input. Includes a theoretical analysis and an example using the MC1539 operational amplifier.
Motorola AN-460 (9 pg.)

13 **"The MC1556 Operational Amplifier and its Applications"**
(MC1456, MC1556)
Gives characteristics and describes operation. Discusses application as a voltage follower, high impedance bridge amplifier, and a logarithmic amplifier.
Motorola AN-522 (8 pg.)

14 **"Analysis and Design of the Op/Amp Current Source"**
Develops expressions for the transfer function and output impedance of voltage controlled op amp current source using both ideal and non-ideal models. Discusses effects of parameter and temperature variations on performance.
Motorola AN-587 (7 pg.)

15 **"Drift Compensation Techniques for Integrated DC Amplifiers"**
Op amp bias current and offset voltage compensation are discussed. Current compensation techniques for high impedance levels and methods to achieve chopper-stabilized drift performance at low impedance levels are covered.
National Linear Applications Handbook, Vol. I, AN-3 (4 pg.)

16 **"Monolithic Operational Amplifiers — The Universal Linear Component"**
(LM101, LM102)
Applications of the LM101 and, in some cases, the LM102, include free-running multivibrator, level shifting amplifier, voltage comparator, servo preamplifier, and computing circuits. Frequency compensation techniques are discussed in detail.
National Linear Applications Handbook, Vol. I, AN-4 (10 pg.)

©IC MASTER 1978

LINEAR

Amplifier, Operational (cont)

1 "Low Power Operational LH0001 Amplifier"
(LH0001)
Operation of circuit offering 0.2 mv typical offset voltage at 25°C and quiescent supply currents in 100 μA range.
National Linear Applications Handbook, Vol. I, An-10 (4 pg.)

2 "Noise Specs Confusing?"
Explanation of terms and factors contributing to noise, calculation of noise figure and signal to noise ratio. Gives points on selecting low noise amplifiers.
National AN-104 (8 pg.)

3 "An Applications Guide for Operational Amplifiers"
(LH101, LH201, LM101, LM201, LM301)
Discusses application of operational amplifiers, grouping them in five categories: simple amplifiers, operational circuits, transducer amplifiers, wave shapers and generators, and power supplies.
National AN-20 (12 pg.)

4 "A Simplified Test Set for Operational Amplifier Characterization"
(LM101, LM201, LM301, LM709)
Gives a functional description of set that allows quantitative characterization of the dc operational amplifier parameters for the LM101 and LM709. Discusses the circuit, includes construction information, and gives a layout for the tester circuit boards.
National AN-24 (12 pg.)

5 "IC Op Amp Beats FETs on Input Current"
(LM108, LM208, LM308)
Describes LM108 operation and performance. Applications: sample and hold circuit, integrator, sine wave oscillator, capacitance multiplier, instrumentation amplifier, logarithmic converter, transducer amplifier, current source and voltage comparator. Discusses PC board construction.
National Linear Applications Handbook, Vol. I, AN-29 (20 pg.)

6 "Logarithmic Converters"
(LM101A, LM102, LM108)
Describes log generators, anti-log generators, cube generators, and multiplier/dividers, using the LM101A and LM108 op amps.
National Linear Applications Handbook, Vol. I, AN-30 (4 pg.)

7 "Op Amp Circuit Collection"
(LM101A, LM102, LM107, LM108)
Gives schematics only for some 90 cireuits using one or more of the following operational amplifiers: LM101A, LM102, LM107, LM108. Includes basic, signal generation and signal processing circuits.
National Linear Applications Handbook, Vol. I, AN-31 (20 pg.)

8 "New Design Techniques for FET Op Amps"
(LH0022, LH0022C, LH0042C, LH0052, LH0052C)
Gives parameters for LH0022, LH0042 and LH0052 operational amplifiers. Discusses rationale for FETs in these devices, describes the circuits. Describes application as voltage followers, integrators, sample/hold amplifiers, comparators, instrumentation and charge amplifiers.
National Linear Applications Handbook, Vol. I, AN-63 (12 pg.)

9 "Micropower Circuits Using the LM4250 Programmable Op Amp"
(LM4250, LM4250C)
Describes LM4250 circuit and bias current setting procedure. Applications: 500 nano-watt amplifier, micro-power comparator meter amplifier, pulse generator, instrumentation amplifier and a 5v regulator for CMOS logic circuits.
National AN-71 (8 pg.)

Amplifier, Operational (cont)

10 "The LM3900 — A New Current-Differencing Quad of ±Input Amplifiers"
(LM3900)
Describes Norton "current mirror" circuit. Emphasizes the amplifiers' application in circuits for single power supply systems. Discusses use in ac and dc amplifiers, voltage regulators, RC active filters, waveform generators, phase locked loops, and voltage controlled oscillators.
Also covers designing digital and switching circuits, and special applications, including tachometers, squaring amplifiers, positive fedback oscillators, line operated audio amplifiers, and power circuits.
National AN-72 (39 pg.)

11 "Applications for a High Speed FET Input Op Amp"
(LH0062, LH0062C)
Describes circuit, performance, compensation techniques for LH0062. Discusses applications in high speed sample and hold circuit, high speed peak detector, programmable integrator, and wide band ac voltmeter. Covers heat sinking, guarding, and bootstrapping.
National AN-75 (4 pg.)

12 "Use the LM158/LM358 Dual, Single Supply Op Amp"
(LM158, LM258, LM358)
Proposes using this dual op amp with a single supply in place of the MC1458/MC1558 with a split supply.
National AN-116 (4 pg.)

13 "LM143 Monolithic High Voltage Operational Amplifier Applications"
(LM143, LM243, LM343)
Describes circuit. High voltage applications: 130v p-p drive, ±34 CMV instrumentation amplifier. high compliance current source. Current boosted applications: 100 ma, 1 amp, high compliance. 90 W audio amplifier. High voltage power supplies. Also application tips.
National AN-127 (12 pg.)

14 "A Linear Multiple Gain-Controlled Amplifier"
Discusses gain control with FETs in the feedback path of an operational amplifier. Considers remote or multichannel gain control, volume expansion, and volume compression/limiting as possible applications.
National AN-129 (8 pg.)

15 "A Linear Multiple Gain Controlled Amplifier"
Portrays a linear control function with over three decades of gain achieved with a FET in the feedback path of a non-inverting amplifier. Gain control with FETs, distortion, bandwidth, and the control time constant are other subjects touched upon.
National FET Databook (8 pg.)

16 "Binary/BCD Gain Programmed Amplifiers"
Illustrates construction of a gain programmed amplifier using an FET quad current mode switch, 4 binary weighted resistors, and an op amp.
National FET Databook (3 pg.)

17 "The Monolithic Op Amp: A Tutorial Study"
Detailed paper on the design of IC operational amplifiers.
National Linear Applications Handbook, Vol. II (18 pg.)

©IC MASTER 1978

Amplifier, Operational (cont)

1 **"Feedforward Compensation Speeds Op Amp"**
(LM101A, LM201A, LM301A)
Compares standard frequency compensation with feedforward frequency compensation of LM101A. Charts open loop response for both compensation networks. Shows fast integrator circuit.
National Linear Applications Handbook, Vol. I, LB-2 (2 pg.)

2 **"Fast Compensation Extends Power Bandwidth"**
(LM101A, LM201A, LM301A)
Describes frequency compensation technique that extends power bandwidth of LM101A for non-inverting gains of unity to ten and also reduces gain error at moderate frequencies.
National Linear Applications Handbook, Vol. I, LB-4 (2 pg.)

3 **"Precision AC/DC Converters"**
(LM101A, LM201A, LM301A)
Describes the use of the LM101A in a circuit for eliminating diode threshold potential, use as a precision clamp, as a fast half wave rectifier, and precision AC to DC converter.
National Linear Applications Handbook, Vol. I, LB-8 (2 pg.)

4 **"Universal Balancing Techniques"**
Describes offset voltage adjustment for inverting amplifiers using less than 10 K source resistance or using any type of feedback element, for non-inverting amplifiers, for voltage followers, and for differential amplifiers.
National Linear Applications Handbook, Vol. I, LB-9 (2 pg.)

5 **"Speed Up the LM108 with Feedforward Compensation"**
(LM108, LM208, LM308)
Describes simple feedforward network for use with LM108 to achieve a factor of five improvement in speed.
National Linear Applications Handbook, Vol. I, LB-14 (2 pg.)

6 **"Easily Tuned Sine Wave Oscillators"**
(LM101A, LM111, LM201A, LM211, LM301A, LM311)
Describes a circuit using the LM101A and LM111 that provides both a sine and square wave output for frequencies for below 20 Hz to above 20 KHz. Also describes low distortion sine wave oscillator using two LM101As.
National Linear Applications Handbook, Vol. I, LB-16 (2 pg.)

7 **"LM118 Op Amp Slews 70 V/μS"**
(LM118, LM218, LM318)
Describes this operational amplifier with 15 MHz bandwidth. Covers a compensation scheme to approximately double bandwidth and slew rate, and one for minimum setting time.
National Linear Applications Handbook, Vol. I, LB-17 (2 pg.)

8 **"Predicting Op Amp Slew Rate Limited Response"**
Discusses slew rate limiting and gives curves for sine wave and step voltage response.
National Linear Applications Handbook, Vol. I, LB-19 (2 pg.)

9 **"Low Drift Amplifiers"**
(LM121, LM725, LM741, LM308)
Discusses problems causing drift in amplifiers and recommends solutions. Includes discussion of thermal and electrical shielding, resistor choice, circuit layout, and offset balancing.
National Linear Application Handbook, Vol. II, LB-22 (2 pg.)

10 **"True RMS Detector"**
Describes circuit using operational amplifiers that provide dc output equal to rms value of input with 2% accuracy for a 20 V_{p-p} input signal from 50 Hz to 100 kHz.
National Linear Applications Handbook, Vol. II, LB-25 (2 pg.)

Amplifier, Operational (cont)

11 **"Low Current Ammeter"**
(LM216A)
Depicts construction of an ammeter using the LM216A op amp.
National LB-37 (2 pg.)

12 **"Specifying Selected Op Amps and Comparators"**
See listing under (Linear) Comparators (National)

13 **"IC Preamp Challenges Choppers On Drift"**
See listing under (Linear) Pre-amplifiers (National)

14 **"Digital Nulling of OP-05 and SSS725"**
(DAC-08, OP-05, SSS725)
Shows digitally controlled offset nulling achieved by imbalancing the first stage collector currents of the op amp with a D/A.
Precision Monolithics AB-3 (1 pg.)

15 **"Simple Precision Millivolt Reference Uses No Zeners"**
(OP-05)
Describes −3.5 mv to 3.5 mv reference built with instrumentation op amp and a potentiometer.
Precision Monolithics AN-10 (1 pg.)

16 **"The OP-07 Ultra-Low Offset Voltage Op Amp — A Bipolar Op Amp that Challenges Choppers, Eliminates Nulling"**
(OP-07)
Describes circuit design, compares performance to other devices. Covers application in a voltage reference, a high accuracy buffer, a D/A test system, a composite summing amplifier, an absolute value circuit, an analog computer building block, and as a thermocouple amplifier.
Precision Monolithics AN-13 (12 pg.)

17 **"Minimization of Noise in Operational Amplifier Applications"**
(OP-07)
Describes internal and external sources of noise. Helps to locate noise sources by frequency. Gives examples of noise calculation using the OP-07 as an example.
Precision Monolithics AN-15 (11 pg.)

18 **"The OP-17, OP-16, OP-15 as Output Amplifiers for High Speed D/A Converters"**
(DAC-08, DAC-20, DAC-76, OP-15, OP-16, OP-17)
Illustrates design of high speed, voltage output D/A converters using these devices. Circuit diagrams for high speed, low drift, and low power applications are provided.
Precision Monolithics AN-24 (3 pg.)

19 **"Applications of the RCA CA3048 Integrated Circuit Amplifier Array"**
(CA3048)
Discusses operating parameters for this 4-amplifier array and covers applications, including Hartley and Colpitts oscillators, an astable multivibrator, four-channel linear mix, and a gain-controlled amplifier.
RCA ICAN-4072 (8 pg.)

20 **"Application of the RCA CA3008 and CA3010 Integrated-Circuit Operational Amplifiers"**
(CA3008, CA3010)
Describes operating characteristics of two op amps and their application in video amplifiers, frequency-shaping amplifiers, comparators, integrators, differentiators, scaling adders. Also covers the addition of a power output stage and/or input emitter followers.
RCA ICAN-5015 (15 pg.)

©IC MASTER 1978

LINEAR

Amplifier, Operational (cont)

1 **"Application of the RCA CA3015 and CA3016 Integrated-Circuit Operational Amplifiers"**
(CA3015, CA3016)
Describes operating characteristics at ±12 v. Applications covered are: 50-dB amplifier; twin-T bandpass amplifier, 20-dB, 10 MHz bandpass amplifier; and voltage follower.
RCA ICAN-5213 (6 pg.)

2 **"Application of RCA CA3033 and CA3033A High Performance Integrated-Circuit Operational Amplifiers"**
(CA3033, CA3033A)
Describes the basic circuit and operation. Covers application as a 250 mw, power amplifier and shows use in a DVM as a multivibrator, staircase generator, and comparator.
RCA ICAN-5641 (8 pg.)

3 **"Applications of the CA3080 and CA3080A High-Performance Operational Transconductance Amplifiers"**
(CA3090, CA3080A)
This device has an additional control terminal for flexibility. Circuit operation is discussed. Applications covered: communications and industrial systems, modulators, multiplexers, sample and hold circuits, gain control circuits, and micropower comparators. Appendix discusses current mirrors.
RCA ICAN-6668 (16 pg.)

4 **"Measurement of Burst (Popcorn) Noise in Linear Integrated Circuits"**
Discusses "pass-fail" criteria and describes a test set up for measuring burst noise. The setup includes a high gain amplifier-filter, a bipolar comparator, and a counter-latch-timer control circuit.
RCA ICAN 6732 (8 pg.)

5 **"L144 Programmable Micro-Power Triple Op Amp"**
(L144)
Describes device function, elements of programming, effects of slew rate limiting. Applications discussed include instrumentation amplifier, tone detectors, triple-amplifier active filters, and a micropower double-ended limit detector.
Siliconix AN73-6 (6 pg.)

6 **"Operational Amplifier Parameter Definition and Measurement Guide"**
Defines parameters and means of measuring them.
Teledyne Philbrick AN-23 (8 pg.)

7 **"Logarithmic Amplifiers and Operators Parameter Definition and Measurement"**
Defines and explains logarithmic amplifier parameters.
Teledyne Philbrick AN-27 (3 pg.)

8 **"The Instrumentation Amp vs the Op Amp: Which, Where, and How to Use Them"**
See listing under (Linear) Amplifiers, Instrumentation (Teledyne Philbrick)

9 **"Designing with TL080 BIFET Op Amps"**
(TL080, TL081, TL082, TL083, TL084)
Presents data sheet information, performance characteristics, and various applications including an IC preamplifier, a positive feedback bandpass filter, and a quadrature oscillator.
Texas Instruments CA-193 (11 pg.)

Amplifiers, Power

10 **"Power D/A Converters Using the IH8510"**
See listing under (Linear) Converters (Intersil)

11 **"The MC1554 One-Watt Monolithic Integrated Circuit Power Amplifier"**
(MC1554)
Describes the circuit, including dc characteristics, frequency response, and distortion. Shows how to calculate package power dissipation using the curves on the data sheet. Describes application, as one watt non-inverting, inverting, pulse power, and three-watt differential output amplifiers.
Motorola AN-401 (7 pg.)

12 **"Audio Handbook"**
See listing under (Linear) Consumer, Audio (National)

13 **"LM380 Power Audio Amplifier"**
See listing under (Linear) Consumer, Audio (National)

14 **"LM377, LM378, LM379 Dual Two, Four, and Six Watt Power Amplifiers"**
(LM377, LM378, LM379)
Discusses operation, choice and use of these circuits in audio applications. Covers distortion and heat dissipation. Also covers use in a bridge configuration, plus use as a Wein bridge power oscillator, motor drive, power comparator, relay and lamp driver.
National AN-125 (11 pg.)

15 **"Application of the RCA CA3020 and CA3020A Integrated Circuit Multi-Purpose, Wide-Band Power Amplifiers"**
(CA3020, CA3020A)
Circuit description and operation. Both circuits operate from single supply voltage as low as +3 v, offer voltage gains over 60 dB with a 3 dB bandwidth of 8 MHz. Discussion of audio, broadband and video amplifier, video line driver, motor controller and servo amp applications.
RCA ICAN-5766 (8 pg.)

16 **"TBA820 Two-Watt Monolithic Audio Amplifier"**
(TBA820)
Lists main electrical characteristics of device and presents typical applications.
SGS-ATES Technical Note 114 (11 pg.)

17 **"TCA940 Fully Protected Audio Amplifier"**
(TCA940)
Presents temperature and output short circuit protection features of the device along with a description of its performance. Illustrates use of the device in a stereo amplifier and an equalized amplifier for magnetic pickups.
SGS-ATES Technical Note 119 (15 pg.)

18 **"TBA810S/AS Thermally Protected Power Amplifier"**
(TBA810)
Description of the device followed by discussion of its performance. Also shows examples of use in tone control, TV, radio and tape playback channel applications.
SGS-ATES Technical Note 120 (16 pg.)

19 **"TCA830S-Thermally Protected Audio Power Amplifier"**
(TCA830S)
Briefly describes how the device functions followed by an examination of performance under different supply and load conditions. Portable AM/FM receiver, intercom, and magnetic tape player circuits are shown.
SGS-ATES Technical Note 126 (15 pg.)

Amplifiers, Power (cont)

1 **"TDA2020/TDA2010 HI-FI Monolithic Amplifiers"**
(TDA2020, TDA2010)
Describes these power amplifiers and how to apply them.
SGS-ATES Technical Note 130 (12 pg.)

Amplifiers, RF

2 **"An Integrated Circuit AGC IF Amplifier"**
(μA757)
Describes circuit and performance of μA757, which is recommended for applications in military and industrial equipment, also speech compressor amplifiers.
Fairchild Application Note 204 (4 pg.)

3 **"A High Gain Integrated Circuit RF-IF Amplifier with Wide Range AGC"**
(MC1590G)
Describes operation and Y parameters of the MC1590G. Applications include mixer plus IF, video, single and two-stage RF amplifiers.
Motorola AN-513 (10 pg.)

4 **"A Two-Stage 1kW Solid-State Linear Amplifier"**
Discusses the design of 50W and 300W linear amplifiers for the 1.6 to 30 MHz frequency band.
Motorola AN-758 (16 pg.)

5 **"Linear Amplifiers for Mobile Operation"**
Discusses the design of a portable amplifier suitable for amateur radio applications.
Motorola AN-762 (8 pg.)

6 **"A Compiete Monolithic AM/FM/SSB IF Strip"**
See listing under (Linear) Consumer, AM/FM (National)

7 **"Applications of the LM173/LM273/LM373"**
(LM173, LM273, LM373)
Discusses FM, AM, and SSB operation of this multi-mode IF amplifier/detector.
National Linear Applications Handbook, Vol. I, LB-13 (2 pg.)

8 **"Tuned Circuit Design Using Monolithic RF/IF Amplifiers"**
(LM171, LM703)
Discusses operating parameters for the LM171 and LM703 in emitter-coupled and cascode configurations. Brief description of 10.7 MHz emitter-coupled stage and 100 MHz cascode amplifier.
National Linear Applications Handbook, Vol. I, AN-6 (6 pg.)

9 **"Logarithmic IF Strips Using Monolithic Integrated Circuits"**
(SL521)
Describes operation of this log amplifier in successive detection type IF strips with center frequencies from 10 to 100 MHz. Covers broadband and narrow band circuits and describes in detail a 60 MHz wide-range logarithmic amplifier.
Plessey Semiconductor Technical Communication (3 pg.)

10 **"Logging IF Strip"**
(SL1521)
Describes a logging IF strip using Plessey IC's.
Plessey Semiconductor (2 pg.)

Amplifiers, RF (cont)

11 **"Application of the RCA CA3004, CA3005, and CA3006 Integrated-Circuit RF Amplifiers"**
(CA3004, CA3005, CA3006)
Discusses operating modes, Y parameters, noise performance, video amp capabilities, gain control, cross modulation and modulation distortion. Covers application as single-ended RF amplifier, tuned IF amplifier, mixer, suppressed-carrier modulator and product detector.
RCA ICAN-5022 (26 pg.)

12 **"Application of the RCA CA3002 Integrated-Circuit IF Amplifier"**
(CA3002)
Describes circuit, operating modes, characteristics, and application as an envelope detector, product detector, and a Schmitt trigger.
RCA ICAN-5036 (9 pg.)

13 **"Application of the RCA CA3028A and CA3028B Integrated-Circuit RF Amplifiers in the HF and VHF Ranges"**
(CA3028A, CA3028B)
Describes circuits and operating modes. Covers use as an RF amp, autodyne converter, IF amp, and limiter.
RCA ICAN-5337 (10 pg.)

14 **"Application of the RCA CA3021, CA3022, and CA3023 Integrated-Circuit Wideband Amplifiers"**
(CA3021, CA3022, CA3023)
Describes circuit and operating characteristics. Covers video, 10 MHz IF, 455 KHz IF, 28 MHz two-stage limiter, and 500 kHz limiting amplifier applications.
RCA ICAN-5338 (12 pg.)

15 **"Principal Features and Applications of the RCA CA3040 Integrated-Circuit Wideband Amplifier"**
(CA3040)
Discusses bias modes, characteristics and ratings, stability, mounting, connections, and typical wideband amplifier circuits.
RCA ICAN-5977 (11 pg.)

Amplifiers, Sense

16 **"Semiconductors for Plated-Wire Memories"**
See listing under (Digital) Interface (Motorola)

17 **"An Integrated Sense Amplifier for Core Memories"**
(MC1440, MC1540)
Discusses core memories and design considerations for a sense amplifier. Establishes performance and environment specs for amplifier design, analyzes design of MC1540, and discusses measured performance.
Motorola AN-245A (7 pg.)

18 **"The MC1541, A Gated Dual-Channel Sense Amplifier for Core Memories"**
(MC1441, MC1541)
Discusses circuit operation, design considerations, interface problems, and applications.
Motorola AN-474 (10 pg.)

LINEAR

Amplifiers, Video

1 **"A Wide Band Monolithic Video Amplifier"**
(MC1552G, MC1553G)
Describes basic operation of the MC1552G and MC1553G, and the characteristics obtained as a function of the devices' operating modes. Applications: pulse amplifier, summing/scaling amplifier, oscillator, and tuned amplifier.
Motorola AN-404 (13 pg.)

2 **"Using the MC1545, A Monolithic Gated Video Amplifier"**
(MC1445, MC1545)
Describes ac and dc operations and discusses applications as a video switch, amplitude modulator, balanced modulator, pulse amplifier, frequency shift keyer and wideband differential amplifier.
Motorola AN-475 (7 pg.)

3 **"Gated Video Amplifier Applications — The MC1545"**
(MC1445, MC1545)
Reviews basic operation and discusses applications, including several modulators, gated multivibrators, gated oscillators and FSK systems. Also discusses AGC, single supply operations, and temperature compensation of the active gate.
Motorola AN-491 (15 pg.)

4 **"Television Video IF Amplifier Using Integrated Circuits"**
See listing under (Linear) Consumer, TV (Motorola)

5 **"Application of the RCA CA3001 Integrated-Circuit Video Amplifier"**
(CA3001)
Describes circuit and operating characteristics. Covers cascaded stages and use as a Schmitt trigger.
RCA IICAN-5038 (9 pg.)

6 **"The SG1401 Video Amplifier"**
(SP1401)
Discussion of fixed and variable gain. The high frequency stability is discussed to aid in optimizing the various configurations for this device.
Silicon General Linear IC Product Guide (2 pg.)

Arrays

7 **"Using the SL362C Low Noise Transistor Pair"**
(SL362)
Provides general data on noise performance plus application in DC to 200 MHz amplifier.
Plessey Semiconductor Technical Communication (4 pg.)

8 **"Application of the RCA CA3018 Integrated Circuit Transistor Array"**
(CA3018)
Array of two isolated silicon epitaxial transistors plus two transistors with emitter-base common connections, suited for closely matched device requirements or interconnections with non-integrable components. Applications covered include IF-RF, video, agc, audio and dc amplifiers.
RCA ICAN-5296 (5 pg.)

9 **"Application of the RCA CA3019 Integrated-Circuit Diode Array"**
(CA3019)
Describes circuit configuration, operating characteristics and applications, including balanced modulator, high-speed gates, balanced mixer, and a ring modulator.
RCA ICAN-5299 (6 pg.)

Arrays (cont)

10 **"Designing with an IC Transistor Array Containing Matched Super-Beta Transistors"**
(CA3095)
Describes CA3095 IC array. Applications: low frequency amplifier, low noise video amplifier, long-delay monostable multivibrator, low-input-bias current comparator, analog timer for long delays, high input impedance dc-voltmeter circuit, and tape-head preamplifier.
RCA ICAN-6222 (9 pg.)

11 **"Monolithic Darlington Arrays Reduce Interface Cost and Complexity"**
(ULN-2001A, ULN-2002A, ULN-2003A)
Discusses packaging and heat dissipation of these 50v, 100-350 ma units. Covers parallel operation, input currents and control of up to 125 watts.
Sprague Electric Microcircuit Application Report MAR 75-2 (8 pg.)

12 **"Series ULN-2000A Darlington Transistor Arrays-Description and Application"**
(ULN-2001A, ULN-2002A, ULN-2003A ULN-2004A)
Describes circuit capabilities and its use as an interface.
Sprague (7 pg.)

Communications

See also (Digital) Data Transmission

13 **"HC-55516/32 CVSD Concept and Operations"**
(HC55516, HC55532)
Outlines Continuously Variable Slope Delta Modulation and compares it to pulse code modulation.
Harris Application Note 522 (5 pg.)

14 **"Communication System Transmission Losses"**
Derives equations for computing insertion losses for components in a communication system. Gives computer generated tables, series resistance and reactance plus parallel resistance and reactance for various system impedances.
Motorola AN-710 (5 pg.)

15 **"A Unique Monolithic AGC/Squelch Amplifier"**
(LM170, LM270, LM370)
Describes operation of LM170. Applications: agc circuits with peak or with transistor detectors, squelch preamplifier with hysteresis, voice-operated-relay controls, Wein bridge oscillators, decade tunable oscillators, and a modulated 455 kHz signal generator.
National AN-51 (12 pg.)

16 **"SL600 Series — Integrated Circuits for Radio Communications"**
(SL600 Series)
Describes circuits and applications for the following: RF/IF amplifiers; limiting RF amplifier/detector; AGC generators; AF amplifier, VOGAD side tone amplifier, AM detector, AGC amplifier and SSB demodulator; multimode detector; microphone/headphone amplifier; double balanced modulators; and a square log device. Describes synchrodyne, superhet, SSB and multimode receivers; SSB and AM transmitters; SSB transceiver, a multi/mode transceiver and a Morse keyer.
Plessey Semiconductor Applications Manual (92 pg.)

Communications (cont)

1 **"CRC8030 Telephone DTMF Receiver"**
(CRC8030)
Discusses dual-tone multi-frequency signaling. Includes specifications, test data, and interface capabilities.
Rockwell Application Note (28 pg.)

2 **"The CRC8030 Dual Tone Multi-Frequency Receiver"**
(CRC8030)
Discusses various approaches to DTMF receiver design and DTMF signaling. Includes a chart of receiver specifications and a description of the device.
Rockwell (11 pg.)

3 **"Applications of CMOS Integrated Circuits in Communications Equipment"**
See listing under (Digital) CMOS. (Solid State Scientific)

4 **"Modems"**
See listings under (Digital) Data Transmission

Comparators

5 **"AM685/AM686/AM687 Designing with High Speed Comparators"**
(685, 686, 687)
Gives a mathematical analysis of circuit operation. Discusses use as a pulse detector, precision monostable and applications requiring hysteresis.
Advanced Micro Devices Application Note (10 pg.)

"A New High Speed Comparator, the AM685"
(685)
Describes the circuit design, technology and performance of the 685. Discusses use in a fast A/D.
Advanced Micro Devices Application Note (9 pg.)

7 **"Varying Comparator Hysteresis without Shifting Initial Trip Point"**
Describes adding a positive feedback circuit to introduce precise variable hysteresis into the usual comparator switching action.
Burr-Brown AN-62 (1 pg.)

8 **"The μA760 — A High Speed Monolithic Voltage Comparator"**
(μA760)
Gives a functional description and cites typical performance characteristics. Discusses applications, including level detectors and line receivers, zero crossing detectors, high speed A/D converters, pulse width modulators, and fast peak detectors.
Fairchild Application Note 311 (8 pg.)

9 **"The μA750 Dual Comparator Subsystem"**
(μA750)
Discusses the circuit design considerations and applications, including use in a combined heater/air conditioner control, a malfunction indicator, an analog status indicator and display, and a minimum frequency detector.
Fairchild Application Note 315 (7 pg.)

10 **"Radiation Testing of Linear Microcircuits"**
Includes the 702. See listing under (Linear) General. (Fairchild)

11 **"A Simple Comparator Using the HA2620"**
See listing under (Linear) Amplifiers, Operational (Harris)

Comparators (cont)

12 **"A High Speed Dual Differential Comparator — the MC1514"**
(MC1414, MC1514)
Describes circuit operation and applications, including level and limit detectors, multivibrators, line receivers, sense amplifiers, zero crossing pulse generator and a peak voltage detector.
Motorola AN-547 (13 pg.)

13 **"Precision IC Comparator Runs from 5V Logic Supply"**
(LM111, LM211, LM311)
Describes the LM111 circuit. Applications: photodiode level detector, zero crossing detectors, digital interface circuits, multivibrators, oscillators, and a frequency doubler. Includes application hints.
National Linear Applications Handbook, Vol. I, AN-41 (6 pg.)

14 **"LM139/LM239/LM339 — A Quad of Independently Functioning Comparators"**
(LM139, LM239, LM339)
Describes LM139 circuit. Applications: comparators with hysteresis, limit comparators with lamp drivers, zero crossing detectors, oscillators, MOS clock drivers, wide range VCO, AND/NAND gates, OR/NOR gates, multivibrators, time delay generators, pulse width modulator, temperature alarm, tape reader and peak detector.
National AN-74 (16 pg.)

15 **"Application of Programmable Micropower Comparators"**
(L161)
Describes the device and how to program it. Also describes the effects of programming on AC characteristics, limit, zero crossing, and level detectors; DC to DC converter applications.
Siliconix AN76-7

16 **"Comparing the High Speed Comparators"**
(LM160, LM161, LM260, LM261, LM360, LM361)
Compares LM360 to μA760 and LM261 to NE529. Covers application as a peak detector for tape and disk file channels and in a high-speed 3-bit A/D converter.
National AN-87 (6 pg.)

17 **"Fast Voltage Comparators with Low Input Current"**
(LM102, LM106, LM202, LM206, LM302, LM306)
Describes use of LM102 to buffer the input of the LM106 comparator. Applications: comparators for fast A/D converters, for zero crossing detectors, and for ac coupled signals.
National Linear Applications Handbook, Vol. I, LB-6 (2 pg.)

18 **"An IC Voltage Comparator for High Impedance Circuitry"**
(LM111, LM211, LM311)
Describes LM111 circuit and comparison to LM106/LM710. Applications: zero crossing detector driving an analog switch, detector for a magnetic transducer, comparator for a low level photodiode, and driving a ground-referred load.
National Linear Applications Handbook, Vol. I, LB-12 (2 pg.)

19 **"Specifying Selected Op Amps and Comparators"**
Discusses the most common parameters that are tested on operational amplifiers and comparators and the relative difficulty of testing on high speed equipment. Gives a guideline to tightened specifications.
National Linear Applications Handbook, Vol. II, LB-26 (2 pg.)

20 **"Microvolt Comparator"**
(LM111, LM211, LM311, LM121A, LM221A, LM321A)
Describes an LM121A preamplifier driving an LM111 comparator.
National Linear Applications Handbook, Vol. II, LC-32 (2 pg.)

©IC MASTER 1978

LINEAR

Consumer, AM/FM

1 **"Integrated Circuits for FM Receivers"**
(μA703, μA753, μA758, μA3075)
Describes ICs capable of performing all basic functions of an FM stereo receiver, except the front end. Discusses 753 IF block, CA3075 2nd IF block, 758 stereo multiplex decoder, 706 audio power amplifier.
Fairchild Application Note 318 (7 pg.)

2 **"The μA758 — A Phase Locked Loop FM Stereo Multiplex Decoder"**
(μA758)
Gives functional description of this device, including input buffer/amplifier and bias supply, demodulator, stereo switch and lamp driver, VCO, frequency dividers, pilot phase and amplitude detectors. Discusses operating characteristics, testing and alignment.
Fairchild Application Note 319/1 (11 pg.)

3 **"The μA732 and μA767 Integrated Circuit Stereo Multiplex Decoders"**
(μA732, μA767)
Discusses stereo demodulation, stereo/monaural switching, and interstation audio mute switching sections of these devices. Describes performance characteristics, external components required, alignment and user options.
Fairchild Application Note 286 (8 pg.)

4 **"A Fully Integrated High Quality AM/FM Stereo Receiver"**
(μA706, μA720, μA739, μA753, μA758, μA3075)
Describes receiver using ICs with a comparison to discrete design.
Fairchild Application Note 328/1 (6 pg.)

5 **"Integrated Circuit IF Amplifiers for AM/FM and FM Radios"**
(MC1350, MC1355, MC1357, MFC4010, MFC6010)
Discusses the use of ICs in four IF amplifiers: a high performance FM, a quadrature detector FM, a composite AM/FM, and an economy model FM receiver.
Motorola AN-543A (14 pg.)

6 **"Scanning Logic for RF Scanner-Receivers Using CMOS Integrated Circuits"**
See listing under (Digital) CMOS (Motorola)

7 **"A Complete Monolithic IF Strip for AM/AGC Applications**
(LM172, LM272)
Circuit operation of LM172/LM272. Covers application in superheterodyne and low frequency T.R.F. receivers.
National Linear Applications Handbook, Vol. I, AN-15 (6 pg.)

8 **"A Complete Monolithic AM/FM/SSB IF Strip"**
(LM273, LM373, LM274, LM374)
Discusses LM273/LM373, and LM274/LM374 IF amplifier/detectors. Includes description of FM, SSB, and AM detection. Applications include: FM slope detector, double conversion IF strip, and coherent phase locked receiver. Also includes application hints.
National AN-54 (8 pg.)

9 **"LM1800 (LM1310, LM1310E) Phase Locked Loop FM Stereo Demodulator"**
(LM1310, LM1800)
Describes this demodulator and discusses typical performance.
National AN-81 (11 pg.)

Consumer, AM/FM (cont)

10 **"Low Cost IC Stereo Receiver"**
(LM1800, LM1820, LM3089)
Describes the complete circuit and performance of an AM/FM/Stereo receiver.
National AN-147 (4 pg.)

11 **"FM Remote Speaker System"**
Describes an FM transmitter which couples to its companion receiver thru the power lines. The system transmits speech or music and is suitable for home use as well as some factory applications.
National AN-146 (4 pg.)

12 **"Low Cost AM Radio System Using LM1820 and LM386"**
(LM1820, LM286)
Presents circuit diagram of a simple AM radio without an rf preamplifier ahead of the mixer.
National Linear Applications Handbook, Vol. II, LB-29 (2 pg.)

13 **"Audio Handbook"**
See listing under Consumer, Audio (National)

14 **"AM/SSB Transceivers and Noise Blanking Using SL1600 Series Circuits"**
(SL1623, SL1626, SL1640, SL1641)
Describes the sub-systems used in AM-SSB transceivers.
Plessey Semiconductor (10 pg.)

15 **"An SSB Transceiver for Citizens' Ban Using Plessey SL1600 Integrated Circuits**
(SL1600 series)
Describes the design of a SSB transceiver.
Plessey Semiconductor (4 pg.)

16 **"An AM Receiver Using the Plessey SL1600 Series"**
(SL1600 series)
Describes the design of a simple AM receiver.
Plessey Semiconductor (7 pg.)

17 **"SL1600 Series Transceiver Applications"**
(SL1600 series)
Discusses simple SSB and multimode transceiver design.
Plessey Semiconductor (32 pg.)

18 **"Integrated Circuits for FM Broadcast Receivers"**
(CA3005, CA3011, CA3012, CA3013, CA3014)
Discusses circuits for FM tuner, IF amplifier, limiter, and detector applications.
RCA ICAN-5269 (7 pg.)

19 **"Integrated-Circuit Frequency-Modulation IF Amplifiers"**
(CA3012, CA3028)
Describe CA3012 and CA3028 differential amplifiers and application in IF-Amplifier strips.
RCA ICAN-5380 (7 pg.)

20 **"An IC for AM Radio Applications"**
(CA3088)
Describes CA3088E and application as a basic subsystem in AM broadcast receivers, as a 10.7 MHz IF amp, and as a general-purpose amplifier array.
RCA ICAN-6022

Consumer, AM/FM (cont)

1 "Application of the RA3089E FM-IF Subsystem"
(CA3089)
Discusses stability considerations and following circuits: quadrature-detector, audio and AFC, mute, tuning meter and rf-agc, if amplifier/detector system and stereo decoder. Also covers operation at frequencies other than 10.7 MHz.
RCA ICAN-6257 (8 pg.)

2 "Integrated-Circuit Stereo Decoder Using the CA3090AQ Stereo Multiplex Demodulator"
(CA3090AQ)
Gives circuit description. Describes the LC oscillator, reactance, stereo defeat, dc coupled flip-flop preamplifier and phase splitter circuits.
RCA ICAN-6259 (10 pg.)

3 "TDA1200 FM-IF System for High Performance Radio Receivers"
(TDA1200)
Gives a detailed description of the device. Describes relative performance of device when used in an FM tuner, an AM/FM car radio, and a portable AM/FM radio.
SGS-ATES Technical Note 117 (12 pg.)

Consumer, Audio

4 "MOS Circuit for Electronic Organs"
(S2193, S2688, S8890, S10110, S10129, S10130, S10131, S50240, S50241, S50242)
Describes the use of ICs for various electronic organ circuits.
American Microsystems AP74-10 (7 pg.)

5 "Applications of the μA739 and μA749 Dual Preamplifier Integrated Circuits in Home Entertainment Equipment"
(μA739, μA749)
Describes circuit operation. Discusses d-c and a-c considerations, compensation and noise performance. Covers applications as a stereo tape amplifier, a high fidelity phonograph preamplifier, and a TV remote control amplifier.
Fairchild Application Note 171 (7 pg.)

6 "A High Output Power, (5 Watt), Low Distortion, IC Audio Amplifier"
(μA706)
Describes circuit, functions, design considerations of the μA706. Discusses application as an audio amplifier with the speaker load connected to ground, with the speaker load between supply and output, and discusses use in an FM stereo receiver.
Fairchild Application Note 317/1 (6 pg.)

7 "Designing a Basic Organ System Using the MK50240"
(MK50240)
Describes an organ system using the MK50240 Top Octave Generator for each octave.
Mostek (3 pg.)

8 "LM380 Power Audio Amplifier"
(LM380)
Describes the circuit and general operating characteristics. Applications: phono amplifier, bridge amplifier, and intercom.
National AN-69 (7 pg.)

Consumer, Audio (cont)

9 "Audio Handbook"
(LM171, LM377, LM378, LM379, LM380, LM381, LM382, LM384, LM386, LM387, LM388, LM389, LM390, LM391, LM703, LM1303, LM1310, LM1351, LM1800, LM1820, LM2111, LM3011, LM3065, LM3075, LM3089, MM5837)
Contains discussions and design particulars on many areas including preamplifiers; AM, FM, and Stereo; power amplifiers; controls, networks and power supply design—covers practical as well as theoretical aspects.
National $4.00 (188 pg.)

10 "Application of the RCA CA3007 Integrated-Circuit Audio Amplifier"
(CA3007)
Describes circuit. Covers application as dual-supply audio driver in a direct-coupled audio amp, and as single-supply audio driver in a capacitor-coupled audio amp.
RCA ICAN-5037 (4 pg.)

11 "Use of Analog Delay Lines for Audio Speed Change without Pitch Changes"
(SAD1024)
Describes technique for increasing or slowing the speed of a recording.
Reticon Application Note No. 112 (4 pg.)

12 "Build a Simple Comb-Filter or Flanger with a Bucket Brigade Delay Line"
(SAD1024)
Describes a flanger (electronic sound modifier) and what is needed to build one.
Reticon Application Note No. 113 (4 pg.)

13 "TDA1054M — Cassette Recorder Preamplifier with ALC"
(TDA1054M)
Discusses features of the device and preamplifier noise. Applications in Hi-Fi, stereo, and dynamic range compressors are described.
SGS-ATES Technical Note 124 (24 pg.)

14 "M252 and M253 Rhythm Generators for Electronic Organs"
(M252, M253)
Defines and describes rhythm generators. Presents these two devices, and describes their use in electronic organs.
SGS-ATES Technical Note 131 (21 pg.)

15 "TCA600/900 and TCA610/910 Integrated Motor Speed Regulators"
See listing under (Linear) Industrial Control (SGS-ATES)

16 "The ULN-2280 Amplifier"
(ULN-2280)
Describes this single power amplifier circuit and discusses applications as a low-cost phonograph amplifier, amplifier with tone controls, common mode amplifier, full bridge amplifier, and a mono FM receiver.
Sprague Electric Microcircuit Application Report MAR 73-2 (6 pg.)

17 "Low-Cost-Dual Class B Driver"
(ULN-2277, ULN-2278)
Describes the ULN-2277/78 ICs and describes use in dual 2-watt and dual 15-watt amplifiers.
Sprague Electric Microcircuit Application Report MAR 73-5 (3 pg.)

©IC MASTER 1978

LINEAR

Consumer, Medical

1 **"A Personalized Heart-Rate Monitor with Digital Readout"**
(MC1776, MC14013, MC14040, MC14572)
Describes digital heart-rate monitor using the MC1776 op amp and CMOS digital ICs.
Motorola AN-714 (4 pg.)

Consumer, TV

2 **"2 Watt Sound System"**
See listing under (Linear) Consumer, AM/FM (ITT Semiconductor)

3 **"Television Video IF Amplifier Using Integrated Circuits"**
(MC1330, MC1350, MC1352, MC1353)
Discusses requirements of the video IF section of a TV receiver. Describes MC1350/2/3 amplifier and MC1330 detector circuits. Includes design for a practical TV IF amplifier and detector.
Motorola AN-545 (11 pg.)

4 **"Hybrid Modules for CATV Line Extender and Trunk Amplifiers"**
(MHW560, MHW561, MHW562)
Covers circuit, packaging, and thermal considerations of MHW560/1/and 2 hybrid modules.
Motorola AN-563 (5 pg.)

5 **"Television Horizontal APC/AFC Loops: The Last 10 Percent"**
Discusses some of the common problems that may be encountered in the design of horizontal APC/AFC loops and methods to avoid or overcome them.
Motorola AN-727 (15 pg.)

6 **"A Medium Cost PLL Varactor Tuning System Utilizing Off-the-Shelf Logic"**
Describes a frequency domain tuning scheme for varactor TV tuners.
Motorola AN-729 (14 pg.)

7 **"A Synthetic Spectrum Tuning System for TV"**
Describes a tuning system which generates a complete spectrum of TV channel markers to achieve precise tuning on any channel.
Motorola AN-739 (12 pg.)

8 **"A Phase-Locked Loop Tuning System for Television"**
Describes a frequency domain tuning system using direct digital count down of the local oscillator.
Motorola AN-744 (10 pg.)

9 **"A Disassociated Intercarrier Television Video IF Amplifier"**
(MC1331)
Discusses a video IF system using the MC1331 low level multiplier detector.
Motorola AN-751 (9 pg.)

10 **"Video Amplifier Design: Know Your Picture Tube Requirements"**
(MC1323)
Describes video systems designed to alleviate design compromises associated with driving a unitized gun picture tube.
Motorola AN-761 (26 pg.)

Consumer, TV (cont)

11 **"The MC1323 — A Fully Programmable Demodulator"**
(MC1323)
Describes operation of this NTSC demodulator and use with various picture tube phosphors, especially color temperature D6500.
Motorola AN-763 (16 pg.)

12 **"An Approach to a Low-Noise TV IF System"**
(MC1331)
Discusses TV system noise figure and system trade offs, a technique to measure the IF contribution and ways to minimize the IF noise.
Motorola AN-765 (8 pg.)

13 **"A Color TV Primer for the EE"**
Describes the basic circuits in a TV and the IC's used therein.
National Linear Applications Handbook, Vol. II (pg.)

14 **"Application of the RCA CA3044 and CA3044V1 Integrated Circuits In Automatic-Fine-Tuning Systems"**
(CA3044)
Describes circuits, operating characteristics and dynamic performance of this wideband amplifier for AFC applications.
RCA ICAN-5831 (5 pg.)

15 **"Feedback-Type Volume-Control Circuits for RCA CA3041 and A3042 Integrated Circuits"**
(CA3041, CA3042)
Describes several types of volume controls for television receivers using these ICs, with a detailed discussion of feedback control.
RCA ICAN-5841 (4 pg.)

16 **"Application of the CA3126Q Chroma-Processing IC Using Sample-and-Hold Circuit Techniques"**
(CA3126Q)
Detailed circuit description of this device, which requires only one adjustment; a trimmer capacitor to tune the crystal filter. Discusses performance data, the phase detector, sample and hold circuits, the VCO loop, first chroma amplifier and ACC servo loop, and the second chroma amplifier.
RCA ICAN-6247 (8 pg.)

17 **"Description and Application of the RCA CA3120E Integrated-Circuit TV-Signal Processor"**
(CA3120)
Describes the operation and application of this device which includes TV video noise processor, agc and sync separator circuits.
RCA ICAN-6302 (9 pg.)

18 **"A Single IC for the Complete PIX-IF-System in TV Receivers"**
(CA3068)
Gives a detailed description of the circuit functions of the CA3068 and its use in color and b/w TV receivers.
RCA ICAN-6303 (17 pg.)

19 **"A Flexible Integrated-Circuit Color Demodulator for Color Television"**
(CA3067)
Describes circuit operation of the CA3067, including its output amplifiers, demodulator, demodulator preamp, and tint control amplifier. Describes use of this circuit in a red-green-blue system.
RCA ICAN-6724 (8 pg.)

Consumer, TV (cont)

1 **"Vertical Deflection Output Stages Using Audio Integrated Circuits"**
(TAA611, TAA621, TBA641, TBA800, TBA810, TBA820)
Characterizes the advantages and working principles of vertical deflection circuits using audio IC's. Seven circuits, covering small and large screen performance, are included.
SGS-ATES Technical Note 118 (18 pg.)

2 **"An Approach to a Unified Chroma System"**
Describes design approach that will eventually allow fabrication of a complete single-chip chroma system.
Sprague Electric TP 74-3 (9 pg.)

3 **"An Integrated Two-Watt Sound System for Television Applications"**
(ULN-2211)
Describes the design and use of the ULN-2211 limiter-detector-amplifier.
Sprague Electric TP 72-05 (9 pg.)

4 **"The Type ULN-2214 TV-Sound System"**
(ULN-2214)
Detailed discussion of the design and performance characteristics of this FM limiter-detector-amplifier circuit.
Sprague Electric TP 75-4 (17 pg.)

Converters

Also see Instrumentation.

5 **"Analog-Digital Conversion Notes"**
Covers many aspects of A/D and D/A converters including use, testing and specifying. Extensive applications information includes data systems, acquisition, distribution, communication.
Analog Devices $5.95 (254 pg.)

6 **"Beckman Model 845 Digital-to-Analog Converter"**
(845)
Discusses basic D/A converter performance including interface and transfer characteristics, then covers the performance of the 845 series.
Beckman Instruments (9 pg.)

7 **"D/A Converter Differential Linearity Error — It Really Shows Up"**
Discusses differential linearity, the difference in analog output for a change between two successive digital input codes. Gives graphs of two examples with the same linearity specification.
Burr-Brown AN-58 (2 pg.)

8 **"Don't Forget D/A Converter Tempco"**
Discusses offset, gain and linearity drift with temperature.
Burr-Brown AN-59 (3 pg.)

9 **"Principles of Data Acquisition and Conversion"**
Discusses basic principles of analog to digital systems including sampling rate, aperture error, accuracy, resolution, throughput, and codes.
Burr-Brown AN-79 (5 pg.)

10 **"Squeeze High Performance Out of Low-Cost Hybrid Data Converters"**
Lists ways in which converter performance can be improved by the addition of a few external components.
Burr-Brown AN-86 (4 pg.)

Converters (cont)

11 **"Intrinsically Safe Data Acquisition"**
See listing under (Digital) CMOS (Burr-Brown)

12 **"FX-209 AP Notes"**
(FX-209)
Describes use of the FX-209 delta modulation analog to digital converter as an AGC amplifier, audio delay line and as an audio scrambler.
CMA (6 pg.)

13 **"Graphs Give Aperture Time Required for A-D Conversion"**
Presents two graphs, aperture time versus rate of voltage change and versus frequency, for resolutions from 4 to 16 bits.
Datel Technical Note V-14 (4 pg.)

14 **"Know Your Converter Codes"**
Describes the various A/D and D/A converter codes.
Datel Bulletin V-12 (6 pg.)

15 **"Designer's Guide to V/F Converters"**
Spells out the theory and operation of V/F and F/V converters. Calibration procedures and such applications as ratiometric measurement and frequency difference measurement are covered.
Datel (18 pg.)

16 **"Applications of the ZN425E 8-Bit A-D/D-A Converter"**
(ZN425E)
Covers converter definitions, calibration, bipolar operation. Applications: ramp generation, peak detect, channel selection, weighing system, bargraph drive, multiply/divide, and function generation.
Ferranti (31 pg.)

17 **"Digital-to-Analog Converter Applications"**
(HI1080, HI1085)
Operating modes and applications of HI-1080 converter, which features resistor ladder network and switching devices on same chip. Discusses cascaded D to A converter as well as up-down counter and successive approximation A to D converters.
Harris Application Note 511 (7 pg.)

18 **"Counter Type A to D Converter"**
(HI1080)
Circuit details of an A to D converter employing a unidirectional digital counter and the Hi-1080 eight-bit D to A converter to generate a ramp voltage.
Harris Application Note 512 (3 pg.)

19 **"Applications of a Monolithic Sample-and-Hold/Gated Operational Amplifier"**
See (Linear) Amplifiers, Operational (Harris)

20 **"A-8400 User Guide"**
(A8400)
Theory, circuit details, operation, and design examples of this v/f and f/v converter.
Intech/FMI (18 pg.)

21 **"Digital-to-Analog Converter Circuits Using the 8018A"**
(8018A, 8019A, 8020A)
Discusses D/A converters, both in general and their electrical specifications. Describes circuit operation for 8018A and covers its expansion to 8 and 12 bit units. Also discusses generating reference currents using zeners, pnp transistors or high-gain operational amplifiers as references. Describes system interface requirements.
Intersil Application Bulletin A010 (8 pg.)

©IC MASTER 1978

LINEAR

Converters (cont)

1 **"Selecting A/D Converters"**
Compares and contrasts successive approximation and integrating A/D conversion techniques with respect to speed, accuracy, and cost.
Intersil A016 (6 pg.)

2 **"The Integrating A/D Converter"**
Discusses the dual slope technique with considerable attention to error analysis.
Intersil A017 (4 pg.)

3 **"Do's and Don'ts of Applying A/D Converters"**
Examines topics concerning proper system design when using A/D converters. Subjects treated include ground loop errors, components, references, capacitive coupling, and thermal effects.
Intersil A018 (2 pg.)

4 **"Power D/A Converters Using the IH8510"**
(IH8510, AH8520, IH8521, 7105, 7120)
Discusses the addition of a power amplifier to a D/A converter. Briefly describes use for motor control and programmable power supplies.
Intersil A021 (4 pg.)

5 **"Voltage Transients (Glitches)"**
(MN3008)
Discusses D/A converter analog voltage spikes appearing in the output following a change of input code.
Micro Networks AN-101 (2 pg.)

6 **"Truncation of A/D Converters"**
Describes how to reduce or to program the number of bits converted.
Micro Networks AN-102 (2 pg.)

7 **"When Should a Sample Hold Amplifier be Used?"**
Covers the use of sample-hold amplifiers with A/D converters. Discusses use with dynamically changing signals and the droop rate of the sample-hold circuit.
Micro Networks AN-103 (2 pg.)

8 **"MN312 Connections for Bipolar Output"**
(MN312)
Shows use of an external op amp to convert a unipolar output to bipolar.
Micro Networks AN-104 (2 pg.)

9 **"Serial to Parallel Conversion"**
(MN502, MN5200, MN5210)
Covers timing considerations in the conversion of A/D converter output from serial to parallel form.
Micro Networks AN-106 (2 pg.)

10 **"Simplifying the Digital to Analog Converter through Hybrid Technology"**
Considers basic design problems of D/A converters and gets into hybrid design. Includes construction techniques, specifications and testing.
Micro Networks (10 pg.)

11 **"Analog-to-Digital Conversion Techniques"**
Discusses open-loop and feedback techniques: frequency, pulse width, cascade, ramp, counter, successive approximation, multiple comparison subranging, nonlinear conversion, double and triple ramp conversion.
Motorola AN-471 (21 pg.)

Converters (cont)

12 **"Analog-to-Digital Cyclic Converter"**
(MC1456)
Discusses circuits and operation of medium speed-medium accuracy converter that uses successive approximation technique in which unknown analog input voltage is successively compared to reference voltage to determine each bit of digital output. A comparison of gray and binary code operation and an error analysis are provided.
Motorola AN-557 (10 pg.)

13 **"A Single Ramp Analog-to-Digital Converter"**
Discusses an A/D converter which incorporates a calibration cycle to insure 12 bit accuracy. Briefly covers errors encountered in the converter described.
Motorola AN-559 (9 pg.)

14 **"High Speed Digital-to-Analog and Analog-to-Digital Techniques"**
Gives overview that includes voltage and current output D/As; parallel (flash), tracking, successive approximation, and parallel ripple A/Ds as well as nonsynchronous and synchronous VTF A/D. Glossary of terms.
Motorola AN-702 (14 pg.)

15 **"Binary D/A Converters Can Provide BCD-Coded Conversion"**
(MC1408, MC1508)
Describes the MC1508 D/A converter used as a 2 or 2½ digit BCD converter. Describes application in a 2½ digit digital voltmeter.
Motorola AN-713 (4 pg.)

16 **"Successive Approximation A/D Conversion"**
(MC1408, MC14559)
Describes advances in successive approximation techniques with emphasis on SARs (Successive Approximation Registers.) Shows both a normal and a high speed A/D using these methods.
Motorola AN-716 (8 pg.)

17 **"Autoranging Digital Multimeter Using the MC14433 CMOS A/D Converter"**
(MC14433)
Describes using the MC14433 A/D converter to build an autorange digital multimeter. The multimeter includes ac and dc voltage ranges from 200mV to 200V, ac and dc current from 2mA to 2A full scale, and resistance ranges from 2 kilohms to 2 megohms full scale.
Motorola AN-769 (5 pg.)

18 **"Data Acquisition Networks with NMOS and CMOS"**
See listing under (Microprocessors) Applications (Motorola)

19 **"Analog-to-Digital Conversion Techniques with the M6800 Microprocessor System"**
See listing under (Microprocessor) Systems (Motorola)

20 **"Applications of the MC1405/MC14435 in Digital Meters"**
See listing under (Linear) Instrumentation (Motorola)

21 **"Digital Voltmeters and the MM5330"**
(MM5330)
Describes basic counting techniques for building digital voltmeters and shows how the MM5330 can be used in a dual slope system.
National AN-155 (8 pg.)

22 **"Specifying A/D and D/A Converters"**
Explains and defines the data sheet terms for these converters.
National AN-156 (6 pg.)

Converters (cont)

1 **"Data Acquisition System Interface to Computers"**
(ADC1200, ADC1210, MM5357)
Compares three configurations for multiple input analog to digital converter systems—Random Addressed Multiplexed, Parallel Conversion, and Multiplexed with Memory. Gives detailed comparisons of costs, A/D and interface requirements.
National AN-159 (18 pg.)

2 **"Analog-to-Digital Converter Testing"**
(ADC0800, ADC1210, ADC1211)
Describes a low cost test circuit with board layout for testing A/Ds using a storage scope readout.
National AN-179 (6 pg.)

3 **"A Cheap and Easy DC-DC Converter"**
(LM555)
Design equations, derivations, and schematics used to construct a DC-DC converter.
National AN-183 (4 pg.)

4 **"High Speed Warning Device for Automobiles"**
Proposes a tachometer device operating from the spark coil primary.
National Linear Applications Handbook, Vol. II, LB-33 (2 pg.)

5 **"Logarithmic Converters"**
See listing under (Linear) Amplifiers, Operational (National)

6 **"SC/MP as an Analog-to-Digital Converter"**
See listing under (Microprocessors) Applications (National)

7 **"Strobing the DAC-08 Under Logic Control"**
(DAC-08)
Gives connections for strobing the output of this DAC.
Precision Monolithics AB-1 (1 pg.)

8 **"A Low Cost, High-Performance Tracking A/D Converter"**
(DAC-100, CMP-01)
Basic operation of 8-bit tracking converter that uses DAC-100 series 10-bit D/A converter, CMP-01 series comparator, and 4-bit MSI up/down counters.
Precision Monolithics AN-6 (8 pg.)

9 **"A Low Cost, Easy-to-Build Successive Approximation Analog-to-Digital Converter"**
(DAC-100, CMP-01)
General discussion of feedback A/D converters. Operation of A/D converter capable of 8-bit conversions in 6 μs. The system is expandable to 10-bit resolution. It uses DAC-100, CMP-01, and a successive approximation register.
Precision Monolithics AN-11 (8 pg.)

10 **"Interfacing Precision Monolithics Digital-to-Analog Converters with CMOS Logic"**
(DAC-100, DAC-01)
Analyzes input circuits of these DACs and CMOS interfaces. Describes a complete 10-bit DAC and an 8-bit A/D.
Precision Monolithics AN-14 (4 pg.)

11 **"Low Cost, High Speed Analog-to-Digital Conversion with the DAC-08"**
(DAC-08)
Discusses the successive approximation technique to A/D and describes three designs with conversion times of 1, 2, and 4 μ sec.
Precision Monolithics AN-16 (7 pg.)

Converters (cont)

12 **"DAC-08 Applications Collection"**
(DAC-08)
Discusses the dual output, and high compliance. Covers use in a CRT display driver, bridge transducer control system, A/D converter, waveform generator, digital additions/subtraction with analog output, digital attenuator and microprocessor controlled A/D converter.
Precision Monolithics AN-17 (12 pg.)

13 **"Differential and Multiplying Digital-to-Analog Converter Applications"**
(DAC-08)
Describes use in 2-quadrant, 4-quadrant and AC-coupled multiplication. Also covers differential and ratiometric conversion, a nulling bridge circuit, a power monitor, and algebraic computation circuits with analog output.
Precision Monolithics AN-19 (8 pg.)

14 **"Exponential Digitally Controlled Oscillator Using DAC-76"**
(DAC-76)
Depicts a 4-IC microprocessor-controlled oscillator with a 8159 to 1 frequency range covering 2.5 Hz to 20 kHz. The circuit uses an exponential current output D/A converter as a programmable current source.
Precision Monolithics AN-20 (3 pg.)

15 **"3 IC 8-Bit Binary Digital to Process Current Converter with 4-20 mA Output"**
(REF-01, DAC-08, OP-14)
Delineates the construction of a process current converter operating from −5v and 23v supplies. Complete theory of operation followed by calibration procedures and a detailed parts list are included.
Precision Monolithics AN-21 (2 pg.)

16 **"Software Controlled A/D Conversion Using DAC-08 and the 8080A Microprocessor"**
(DAC-08, 8080A)
Describes software controlled, 8-bit A/D conversion using the DAC-08 and the 8080A. Subjects include I/O interface considerations, I/O control using memory mapping, and a successive approximation A/D conversion algorithm.
Precision Monolithic AN-22 (4 pg.)

17 **"D/A Converter Generates Hyperbolic Functions"**
(DAC-20)
Explains operating theory and design considerations of a two IC hyperbolic function generator. Includes circuit diagrams.
Precision Monolithics AN-23 (3 pg.)

18 **"Digital-to-Analog Conversion Using the RCA CD4007A COS/MOS IC"**
(CD4007A)
Discusses resistance networks for DAC's and a voltage-follower amp for single-supply operation. Describes a 3-bit COS-MOS DAC.
RCA ICAN-6080 (6 pg.)

19 **"The 4151 Voltage to Frequency Converter"**
(RC4151, RM4151, RV4151)
Describes various uses of this v/f and f/v converter.
Raytheon Semiconductor Application Note (8 pg.)

©IC MASTER 1978

LINEAR

Converters (cont)

1 **"Function and Application of 3½ Digit A/D Converter Set"**
(LD110, LD777)
Describes the operation of the LD110 digital processor and the LD111 analog processor. Various DVM circuits are shown including circuits for ratio, current, ac voltage and frequency measurements. A detailed error analysis is provided.
Siliconix AN74-1 (12 pg.)

2 **"More Applications of the LD110/LD114 ±3½ A/D Converters"**
(LD110, LD111, LD114)
Provides circuits to construct LCDs, multiplexed displays, gas discharge displays, and a DC-DC converter. Also details the differences between the LD110 and LD114.
Siliconix AN76-4 (8 pg.)

3 **"Applying the LD130 ± Digit A/D Converter"**
(LD130)
Discusses device features and its use in displays, interface, and instrumentation.
Siliconix AN76-5 (16 pg.)

4 **"Solve Your Measurement Problems"**
Discusses v/f and f/v converters and their use in data acquisition problems.
Teledyne Philbrick AN-20 (6 pg.)

5 **"Designing High Speed Data Acquisition Systems"**
Discusses the basics of data acquisition systems; focusing on sample-and-hold circuits and multiplexer modules.
Teledyne Philbrick AN-21 (12 pg.)

6 **"How to Specify and Test Voltage to Frequency and Frequency to Voltage Converters"**
Defines device parameters, specifications, and test techniques.
Teledyne Philbrick AN-22 (4 pg.)

7 **"Specifying and Testing Analog-to-Digital Converters"**
Defines the basic parameters, specifications, and test methods.
Teledyne Philbrick AN-24 (7 pg.)

8 **"Specifying and Testing Digital-to-Analog Converters"**
Defines basic parameters, specifications and test methods.
Teledyne Philbrick AN-25 (7 pg.)

9 **"Repetitive Mode Operation for Models 4109/4111 Integrating A/D Converters"**
(4109, 4111)
Runs through external trigger generator and sure start circuit schemes which are used when the devices must run without ceasing to convert.
Teledyne Philbrick AN-28 (2 pg.)

10 **"Specifying and Testing Sample-Hold Amplifiers"**
Defines various sample-hold amplifier parameters and outlines methods of testing for them.
Teledyne Philbrick AN-30 (5 pg.)

11 **"Modular V/F's and F/V's: Simple Solutions to Everyday Conversion Problems"**
Examines applications of V/F's and F/V's. Also demonstrates how accuracy can be improved with the addition of more components.
Teledyne Philbrick AN-32 (7 pg.)

Converters (cont)

12 **"Using the 8750 3½ Digit A/D Converter"**
(8750)
Supplies diagrams showing interface to autoranging circuits, to gas discharge displays, and to two independent displays operated from one A/D.
Teledyne Semiconductor AN-9 (4 pg.)

13 **"Applications for the 9400 Voltage to Frequency/ Frequency to Voltage Converter"**
(9400)
Contains 25 block diagrams of applications in which the device is used.
Teledyne Semiconductor AN-10

Drivers

See also (Digital) Interface

14 **"CMOS Line Drivers"**
States reasons for using CMOS line drivers.
National AN-158 (4 pg.)

15 **"Driving Burroughs' Bar Graph Display"**
Shows the use of comparators and flip-flops to drive these displays.
National DB-4 (2 pg.)

16 **"MOS Clock Drivers"**
(MH0007, MH0009, MH0012, MH0013)
Lists the characteristics of various MOS clock drivers and how they differ in their input stages.
National MB-9 (2 pg.)

17 **"PIN Diode Drivers"**
See listing under (Linear) Switches. (National)

18 **"Driver Circuits for the JFET Analog Switch"**
See listings under (Linear) Switches. (Siliconix)

19 **"Logic to Power Converter Circuits"**
(400-series, 500-series)
Covers the operation of the 400 and 500 high current driver series.
Sprague Electric TP 71-3 (6 pg.)

Followers

20 **"A Fast Integrated Voltage Follower with Low Input Current"**
(LM102)
Circuit description. Use of the LM102 for analog commutator, sample and hold ac amplifier and active filter applications.
National Linear Applications Handbook, Vol. I, AN-5 (11 pg.)

21 **"The LM110 — An Improved IC Voltage Follower"**
(LM110, LM210, LM310)
Compares LM102 and LM110 circuits. Shows diagrams of LM110 as a high pass active filter, high Q notch filter, bandpass filter, and low drift sample and hold circuit.
National Linear Applications Handbook, Vol. I, LB-11 (2 pg.)

22 **"Monolithic Operation Amplifiers — The Universal Linear Component"**
See (Linear) Amplifiers. Operational (National)

Followers (cont)

1 **"Applications for a New Ultra-High Speed Buffer"**
(LH0033, LH0033C)
Describes LH0033 fast voltage follow/buffer. Applications: high speed dual limit comparator for MOS logic, instrumentation shield/line driver, high speed sample and hold circuit, 4.5 MHz notch filter, high input impedance AC coupled amplifier, output buffer.
National AN-48 (4 pg.)

General

2 **"Nonlinear Circuits Handbook"**
Covers principles, circuits, performance, specifications, testing and applications for multipliers, dividers, squares, log circuits, multifunction and rms-to-dc converters.
Analog Devices $5.95 (535 pg.)

3 **"Function Circuits, Design and Applications"**
Covers design theory and applications for such analog functions as multipliers, dividers, logarithmic amplifiers, exponentiators, RMS converters, and active filters. Includes notes on specifying and testing these functions.
Burr-Brown $18.65 (300 pg.)

4 **"Intrinsically Safe Data Acquisition"**
See listing under (Digital) CMOS (Burr-Brown)

5 **"Custom IC Design Using I^2L Technology"**
See (Digital) I^2L (Exar)

6 **"Radiation Testing of Linear Microcircuits"**
(μA702, μA709, μA710, μA711)
Describes tested performance of μA702 and μA709 operational amplifiers and μA710 and μA711 comparators after having been irradiated with fast neutrons of energies greater than 0.01 MeV.
Fairchild Application Note 195 (13 pg.)

7 **"Solid State Gas/Smoke Detector Systems"**
Describes semiconductor and ionization chamber systems with some discussion of the use of these with CMOS ICs.
Motorola AN-735 (9 pg.)

8 **"Noise Sources"**
Reviews noise basics. Includes discussion of resistive, capacitive, and inductive noise sources.
National FET Databook (3 pg.)

9 **"The Noise Figure Fallacy"**
Describes problems of defining and calculating the noise figure.
National FET Databook (2 pg.)

10 **"Linear Applications, Vol. 1"**
Feb. 1973, includes National application notes (AN) 1-6, 8, 10, 13, 15, 20, 21, 23, 24, 28-34, 38, 41, 42, 46, 48, 49, 51, 53, 54, 56, 63, 64, 69-72, 74, 75 and Linear Briefs (LB) 1-20, individually described elsewhere.
National $4.00 (432 pg.)

11 **"Linear Applications, Vol. 2"**
Includes National application notes (AN) 79, 81, 82, 87, 88, 97, 103, 104, 110, 115, 116, 125, 129, 132, 146, 147, 151, 153, 154, 156, 161, 162 and Linear Briefs (LB) 21-34, individually described elsewhere.
National $4.00 (256 pg.)

General (cont)

12 **"CMOS Linear Applications"**
See listing under (Digital) CMOS (National)

13 **"Constant Current LED"**
See listing under (Linear) Regulators (National)

14 **"Surface Acoustic Wave Technology"**
Presents surface acoustic wave fundamentals and use in delay lines, pulse compression filters, bandpass filters, oscillators and discriminators.
Plessey Semiconductor (10 pg.)

15 **"Solid-State Devices Manual"**
Provides tutorial information on discrete devices and ICs, with emphasis on consumer, hobbyist and experimenter applications.
RCA SC-16 $5.00 (750 pg.)

16 **"Linear Integrated Circuits"**
Basic circuit elements, fabrication, packaging, and interconnection techniques are discussed. Data and application information on RCA linear IC's is included.
RCA IC-41 $2.50 (416 pg.)

17 **"Criteria for Choosing Resins and Evaluation Tests for Discrete and Integrated Power Devices in Plastic Packages"**
Describes the criteria and experimental procedures used in the choosing of moulding resin for plastic packaged devices.
SGS-ATES Technical Note 132 (15 pg.)

Industrial Control

18 **"Electronic Controller with an Equilibrium Sustaining Mode"**
(3500 series)
Discusses a controller formed with two operational amplifiers in a pulse width modulation circuit with feedback. The feedback operates from a heater through the medium being heated to sense amplifiers.
Burr-Brown AN-63 (2 pg.)

19 **"Sequential Industrial Control Using the IM5200 FPLA"**
(IM5200)
Describes theory and advantages of using this FPLA. Example included.
Intersil Application Bulletin MB0001 (6 pg.)

20 **"Variable Speed Control System for Induction Motors"**
(MC673, MC688)
Describes control scheme implemented with discrete components and IC logic coupled by an LED and a photo transistor. Gives example of a circuit used to drive a Class F, 60 Hz, permanent-split, capacitor induction motor with a 13 oz. in. load rating.
Motorola AN-575A (5 pg.)

21 **"A ROM-Digital Approach to PWM-Type Speed Control of AC Motors"**
Describes a pulse width modulation scheme to control motor speed. Shows a CMOS-ROM system to provide variable frequency drive for 1, 2, or 3 phase motors.
Motorola AN-733 (12 pg.)

22 **"A Variable Frequency Control for 3φ Induction Motors"**
Describes a variable frequency, variable voltage drive system for 3-phase induction motor controls.
Motorola AN-766 (10 pg.)

©IC MASTER 1978

LINEAR

Industrial Control (cont)

1 **"Temperature Measurement Method Based on Matched Transistor Pair Requires No Reference"**
(MAT-01, OP-10)
Discusses properties of matched transistor pairs, then describes temperature measuring systems built with a matched pair, constant current sources, and a differential amplifier (OP-10)
Precision Monolithics AN-12 (8 pg.)

2 **"TCA600/900 and TCA610/910 Integrated Motor Speed Regulators"**
(TCA600, TCA610, TCA900, TCA910)
Introduces speed regulator basic and describes device performance. Portable and car mounted applications are depicted.
SGS-ATES Technical Note 113 (10 pg.)

3 **"Signetics Analog Manual"**
(μA723, LM381, LM382, MC1488, MC1489, MC1496, PA239, ULN2111, 521, 522, 526, 529, 540, 542, 550, 555, 560, 561, 562, 565, 566, 569, 592) Covers linear IC processing and design, operation amplifier characteristics and applications, voltage regulators, interface circuits, timers, communications circuits, consumer circuits, phase locked loops, and DMOS devices (314 pg.) and data sheets (321 pg.)
Signetics $5.95 (635 pg.)

Instrumentation

Also see Converters

4 **"Application Notes AN-205"**
(FX205)
Describes use of the FX205 pseudo sinewave generator as a tone generator, tone-burst generator, a divide by eight sinewave source and an fsk generator.
Consumer Microcircuits of America AN-205 (16 pg.)

5 **"A Digital Voltmeter Using the AY-5-3507"**
(AY5-3507)
Gives schematics for the analog section, reference voltage generator, clock oscillator, and display circuitry required in addition to this logic IC to build a 3½ digit voltmeter.
General Instrument Microelectronics (5 pg.)

6 **"A Precision Waveform Generator and Voltage Controlled Oscillator"**
(8038)
Discusses the 8038 circuit and operation. Covers external adjustments, power-supply connections, frequency modulation, sweeping, and use in phase locked loops.
Intersil Application Bulletin A012 (8 pg.)

7 **"Low Cost Digital Panel Meter Designs"**
(ICL7106, ICL7107)
Supplies complete assembly instructions for Intersil's LCD and LED evaluation kits as well as descriptions of individual components.
Intersil A023 (6 pg.)

8 **"The Integrating A/D Converter"**
See (Linear) Converters (Intersil)

"A 3½ Digit DVM Using an Integrated Circuit Dual Ramp System"
(MC1405, MC14435)
Describes a complete digital voltmeter based on the MC1405/14435 device pair. Includes input buffers and autopolarity.
Motorola AN-746 (6 pg.)

Instrumentation (cont)

9 **"Applications of MC1405/MC14435 in Digital Meters"**
(MC1405, MC14435)
Provides a detailed applications reference for this two chip, dual slope A/D converter system.
Motorola AN-748 (18 pg.)

10 **"Solid State Altimeter for Transponder Applications"**
(LX3702)
Describes a solid state altimeter using a pressure transducer. The unit provides an altitude transmission code for use with transponders, plus digital readout.
National AN-109 (8 pg.)

11 **"Wide Range Function Generator"**
Construction of a function generator for sine waves as well as square and triangular waveforms that operates below 10 Hz up to 1 MHz, with usable output to approximately 2 MHz. Design technique, circuit design, and construction directions.
National AN-115 (4 pg.)

12 **"Dual Polarity 3½ Digit DVM Realized with Simple CMOS Interface"**
(ADC3711, LF11300)
Describes an auto-zero, auto-polarity 3½-digit DVM using the LF-11300 and the MM74C928 (ADC3711).
National AN-165 (2 pg.)

13 **"LM2907, LM2917 Tachometer/Speed Switch Building Block Applications"**
(LM2907, LM2917)
Covers basic circuit and use. Applications illustrated include: speed switch, analog display driver, automotive tachometer, motor speed controls, skid sensor, A/D converter, frequency doubler.
National Linear Applications Handbook, Vol. II, AN-162 (16 pg.)

14 **"RMS Converters and Their Applications"**
(LH0091)
Covers RMS converter basics and specifications. Sketches applications including spectrum analysis, harmonic distortion, noise, vibration analysis, and DVM uses.
National AN-180 (4 pg.)

15 **"A Fully Differential Input Voltage Amplifier"**
(LM3900)
Describes operation of instrumentation amplifier built with LM3900. Also shows how a transducer bridge amplifier system can be developed with LM3900.
National Linear Applications Handbook, Vol. I, LB-20 (2 pg.)

16 **"Precise Tri-Wave Generation"**
(LM118, LM119)
Describes triangle-wave generator consisting of the LM118 integrator and two LM119 comparators. Discusses applications including VCO, regulator and operational amplifier testing.
National Linear Application Handbook, Vol. II, LB-23 (2 pg.)

17 **"3½ Digit DVM Demonstrator Board"**
(LD110, LD111)
Supplies the schematics, parts-list and art-work for a DVM demonstrator board.
Siliconix DA74-1 (4 pg.)

18 **"LD130 ±3 Digit DVM Demonstrator Board"**
(LD130)
Presents a DVM circuit and the PC board layout used to build a demonstrator board.
Siliconix DA76-2 (2 pg.)

Instrumentation (cont)

1 **"Build an Autoranging DMM with the LD130 A/D Converter"**
(LD130)
Discusses the construction of a DMM using this device.
Siliconix DA76-3 (7 pg.)

2 **"Build a Portable 0 to 99.9°F Liquid Crystal Display Thermometer"**
(DF411, LD130)
Furnishes all pertinent equations, component lists, schematics, and the PC foil pattern need to build a battery operated thermometer.
Siliconix DA77-1 (4 pg.)

3 **"LD120/LD121 4½ Digit DVM"**
(LD120, LD121)
Details construction of a DVM using these devices.
Siliconix DA77-2 (4 pg.)

4 **"EPN2100 Thermal Printer"**
(EPN2100)
Detailed discussion of this solid state thermal printer and its interface requirements.
Texas Instruments Application Report CA-163 (6 pg.)

5 **"EPN2500 Thermal Printer"**
(EPN2500, SN74492, SN4495, TMS2502)
Discusses this thermal printer and its interface requirements. Includes a description of the SN75495 Row Driver and the SN75492 Digit Driver to interface the printhead to MOSFET logic circuits, and the TMS2502 character generator for providing alphanumeric characters.
Texas Instruments Application Report CA-175 (10 pg.)

Modulators

6 **"MC1596 Balanced Modulator"**
(MC1496, MC1596)
Describes device operation and applications, including modulators and demodulators for AM, SSB, and suppressed carrier AM, frequency doublers; and HF/VHF double balanced mixers.
Motorola AN-531 (12 pg.)

7 **"Simplifying Converter Design with a New Integrated Regulating Pulse Width Modulator"**
(SG1524, SG2524, SG3524)
Describes various functions within the device and describes such applications as a low current polarity converter, a DC to DC converter, and a +5 to ±15V flyback converter.
Silicon General (7 pg.)

8 **"Deadband Control with the SG1524 Regulating Pulse Width Modulator Circuit"**
(SG1524, SG2524, SG3524)
Discusses techniques to control the amount of deadband in push-pull inverter applications.
Silicon General Linear Brief 6 (1 pg.)

Multipliers

9 **"AD530 Complete Monolithic Multiplier, Divider, Square Rooter"**
(AD530)
Describes the device, its circuit, external connections and adjustments. Applications include use in a precision rectifier, a phase sensitive demodulator, an automatic level control, a voltage controlled filter, a voltage controlled oscillator, an amplitude modulator and a frequency discriminator.
Analog Device Technical Bulletin (11 pg.)

10 **"A Practical Guide to Applying IC Multipliers"**
Describes theory, gives definitions, covers use in dividers, squares, vector summation, rms to dc conversion, 2ϕ oscillator, and balanced modulators.
Analog Devices (11 pg.)

11 **"Reducing the Total Error of the AD530, AD531, AD532, and AD533 Multipliers"**
(AD530, AD531, AD532, AD533)
Describes method of empirically reducing errors using external resistors.
Analog Devices Application Brief (2 pg.)

12 **"Analog Modules Multiply User's Options"**
Discusses various types of multipliers, logarithmic converters, dividers and square rooters, peak detectors and comparing circuits. Applications: electron beam welder, 3-mode carriage control, position control, fog visionmeter, optical measuring system, and lab pressure standard.
Burr-Brown AN-55 (6 pg.)

13 **"A Primer on Analog Multiplier Specifications"**
Discusses dc and dynamic performance specifications, including output and input offset, gain error, linearity, small signal and full power frequency response, output slewing rate, and settling time.
Burr-Brown AN-51 (6 pg.)

14 **"Analog Shaping"**
(4301)
Describes the use of the 4301 multifunction circuit which has the transfer function XY/Z. Includes rms to dc conversion, exponentiation, trigonometric functions, vector computation, and use as a log amp.
Burr-Brown AN-70 (5 pg.)

15 **"Function Circuits, Design and Applications"**
See listing under (Linear) General (Burr-Brown)

16 **"Analysis and Basic Operation of the MC1595"**
(MC1495, MC1595)
Gives equations for the analysis of this linear four-quadrant multiplier and discusses characteristic performance. Covers multiplication, division, mean squares, square roots, roots and powers.
Motorola AN-489 (14 pg.)

17 **"Wideband Amplifier/Multiplier"**
(SG1402)
Operation and applications of the SG1402. Describes use as a single-ended variable gain amplifier, a modulator, and a demodulator.
Silicon General Linear IC Product Guide (4 pg.)

©IC MASTER 1978

LINEAR

Multipliers (cont)

1 **"Dual Linear-Antilog Voltage Controlled Amplifier"**
(SSM2000, SSM2020)
Discusses control circuits, voltage controlled amplifier, four quadrant multiplier, voltage controlled filter and voltage controlled quadrature oscillator applications.
Solid State Music (4 pg.)

Phase Locked Loops

2 **"Precision PLL System Using the XR2207 and the XR2208"**
(XR2207, XR2208)
Defines phase locked loop parameters and describes this two-chip PLL system. Includes circuit interconnections for both single supply and split-supply operation. Also gives PLL design equations.
Exar TB-1002 (6 pg.)

3 **"The μA758, a Phase-Locked Loop FM Stereo Multiplex Decoder"**
See listing under (Linear) Consumer, AM/FM. (Fairchild)

4 **"Introduction to the Phase Locked Loop"**
(HA-2820)
General discussion of phase locked loops. Describes applications including a bandpass filter, FM receivers, data modems and synchronizers, a motor speed control, and a frequency synthesizer. Discusses features of HA-2800 and 2820 PLL.
Harris Application Note 601 (7 pg.)

5 **"A General Analysis of the Phase Locked Loop"**
Discusses a linear model, stability considerations and steady state response for phase locked loops.
Harris Application Note 602 (8 pg.)

6 **"The HA-2820/2825 Low Frequency Phase Locked Loop"**
(HA-2820, HA-2825)
Explains circuitry of these phase locked loops in 0.1 Hz to 3 MHz operation. Discusses methods for obtaining parameters of a linear model from device's performance curves. External connections are illustrated with an FM demodulator circuit.
Harris Application Note 605 (7 pg.)

7 **"MTTL and MECL Avionics Digital Frequency Synthesizer"**
Describes phase detector, emitter coupled oscillator, prescaler, programmable counter and gives phase locked loop analysis, for a 118 MHz to 136 MHz synthesizer.
Motorola AN-532A (10 pg.)

8 **"Phase-Locked Loop Design Fundamentals"**
(MC4016, MC4024, MC4044, MC4316, MC4324, MC4344)
Outlines fundamental design concepts for phase locked loops implemented with ICs. Gives equations using Laplace Transforms needed to evaluate the basic loop performance and briefly describes a design using MC4000 series devices.
Motorola AN-535 (11 pg.)

9 **"A New Generation of Integrated Avionic Synthesizers"**
Discusses several different types of servo phase locked loop systems and describes a synthesizer for avionic equipment.
Motorola AN-553 (9 pg.)

Phase Locked Loops (cont)

10 **"A Frequency Synthesizer for Aircraft Automatic Direction Finding Systems"**
(MC4016, MC4044, MC1658)
Describes a phase locked loop frequency synthesizer, which includes a MC4016 programmable decade counter, a MC4044 phase detector, and a MC1658 voltage controlled multivibrator.
Motorola AN-594 (10 pg.)

11 **"An ADF Frequency Synthesizer Utilizing Phase-Lock-Loop ICs"**
(MC1648, MC3062, MC4016, MC4018, MC4044, MC7400)
Describes circuit for a synthesizer suitable for the local oscillator function in aircraft Automatic Direction Finder equipment. Covers programming, trouble shooting, power supply requirements, performance, circuit modifications, and circuit construction.
Motorola AN-564 (9 pg.)

12 **"Crystal Switching Methods for MC12060/MC12061 Oscillators"**
(MC12060, MC12061)
Discusses methods of using diodes as rf switches to select crystals for these oscillators. The techniques are useful for electronic selection of one of a group of crystals with minimum disturbance to the series resonant frequency of the selected crystal.
Motorola AN-756 (5 pg.)

13 **"A Medium Cost PLL Varactor Tuning System Utilizing Off-the-Shelf Logic"**
See listing under (Linear) Consumer, TV (Motorola)

14 **"A Phase-Locked Loop Tuning System for Television"**
See listing under (Linear) Consumer, TV (Motorola)

15 **"The Phase-Locked Loop IC as a Communication System Building Block"**
(LM565, LM1496, LM1596)
Discusses basic phase locked loop operation, design considerations, noise performance and describes the IM565 circuit. Applications: IRIG channel demodulator, FSK demodulator, and weather satellite picture demodulator.
National Linear Applications Handbook, Vol. I, AN-46 (12 pg.)

16 **"SL650 Phase-Locked Loop Applications"**
(SL650, SL651)
Describes the circuit and application of this device that can operate to 0.5 MHz. Applications: Modulators-AM, FM, FSK, PAM, SCAM, tone burst, phase shift, delta, PWM, Waveform Generators-sine, triangle, mark/space ratio, staircase: Demodulators; Modem Systems, and a Digital Voltmeter.
Plessey Semiconductor SL650 Applications (32 pg.)

17 **"Applications of the COS/MOS CD4059A Programmable Divide-by-N Counter: Digital Frequency Synthesis for FM Tuners and CB Transceivers"**
(CD4059)
Discusses frequency synthesis using the counter for an FM digital tuner and a CB transceiver.
RCA ICAN-6374 (12 pg.)

18 **"Low-Power Digital Frequency Synthesizers Utilizing COS/MOS ICs"**
(CD4000 Series)
Reviews digital phase-locked loops. Describes their implementation with CMOS for use in FM receiver synthesizers, both heterodyne and prescaling types.
RCA ICAN-6716 (15 pg.)

Photosensitive Devices

1 **"Light Sense"**
Covers optoelectronic sensors and systems including light activated switches and selfscanned photodiode arrays.
Integrated Photomatrix $6.00 (147 pg.)

2 **"Applications of Reticon Photodiode Arrays in Electron and X-Ray Detectors"**
(RL Series)
Describes the use of self-scanning photodiode arrays for detecting soft X-rays (1 to 10A) and electrons in the 10 to 100 KEV range.
Reticon Application Note 101 (4 pg.)

Power Control

3 **"A Monolithic Zero-Crossing AC Trigger (Trigac) for Thyristor Power Controls"**
(μA724)
Describes the μA742 zero-crossing ac trigger, which minimizes radio frequency interference generation. Discusses the circuit and operation of this device. Covers application with an SCR in a half wave circuit, full wave circuits, isolated system connections, and multi-phase power systems.
Fairchild Application Note 208 (5 pg.)

4 **"A 20 KHz, 1 KW Line Operated Inverter"**
Describes application in 208-volt, line-operated, computer mainframe power supply. The output capability of the inverter is 5 v at 200 amp.
Motorola AN-588 (6 pg.)

5 **"Servo Motor Drive Amplifiers"**
Discusses design of transformerless, AC servo amps using power Darlington transistors and IC op amps. Describes two power amplifiers, one using a 28 v power supply, the other, high voltage transistors. Also covers four op amp preamps and 90° phase shifters.
Motorola AN-590 (7 pg.)

6 **"Pulse Width Modulation for Small DC Motor Control"**
(MC1458, MC1709, MC14011)
Discusses several circuits, using discrete, operational amplifier and IC devices, for developing pulse width modulation drive signals. Describes how these signals can control the speed of small motors, primarily permanent magnet type.
Motorola AN-705 (4 pg.)

7 **"Phase Control of AC Power with the SL440"**
(SL440)
Describes the operations of the SL440 power control circuit, and supply requirements. Applications include use with inductive loads, three phase systems, lighting, heating, motor and power supply control.
Plessey Semiconductor (38 pg.)

8 **"Some Applications of a Programmable Power Switch/Amplifier"**
(CA3094)
Brief circuit description of CA3094. Device delivers three watts average power, 10 watts peak power to external load. Applications include Class A power amplifiers and driver amplifiers for complementary transistors, wideband power multivibrators, oscillators, comparators, voltage regulators, analog timers, and motor-speed controllers.
RCA ICAN-6048 (12 pg.)

Power Control (cont)

9 **"Triac Power Controls for Three-Phase Systems"**
(CA3059)
Describes basic approach to designing triac control circuits for use in the switching of three-phase power. Outlines basic design rules and describes CA3059 zero-voltage switch. Discusses methods of isolation of dc logic circuitry. Covers recommended configurations for power control circuits.
RCA AN-6054 (6 pg.)

10 **"Features and Applications of RCA IC Zero-Voltage Switches"**
See listing under (Linear) Switches. (RCA)

11 **"ICs for Phase and Burst Control of SCR or Triac"**
(L120, L121)
Examines 2 ICs which are suitable for SCR and Triac firing. Description includes diagrams, equations, and applications in ON-OFF control and proportional control.
SGS-ATES Technical Note 116 (12 pg.)

12 **"A Monolithic Amplifier-Detector SCR Firing Circuit"**
(ULN-2300)
Describes the operation of the ULN-2300 linear differential amplifier with integral SCR. Covers response, impedance characteristics and closed loop charactertistics, open loop gain vs. temperature, and describes use as a sensitive control, as a drive amplifier in a typical control system and as a control for counters, relays, motors.
Sprague Electric TP69-4 (12 pg.)

13 **"Applications of High-Voltage/High-Current Monolithic Interface Circuits"**
(060, 400 Series, 500 Series)
Application of Series 060 Dual Darlington Switch and Series 400/500 Power Drivers in aircraft lamp drive circuit, solenoid printer, and 4-phase bipolar stepping motor.
Sprague Electric TP 72-4 (5 pg.)

Power Supplies

14 **"Power Supply Design Using the ICL8211 and ICL8212"**
(ICL8211, ICL8212)
Describes use of these devices as positive and negative voltage regulators, constant current sources, high voltage and overvoltage protection circuits, supply window detectors and power failure-shutdown systems.
Intersil A027 (8 pg.)

15 **"Fast IC Power Transistor with Thermal Protection"**
(LM195)
Circuit design of the LM195 IC power transistor, a three terminal device with safe area protection plus current and thermal limiting. Applications: 6 amp variable output switching regulator, 1 amp positive and negative voltage regulators, time delay circuit, and optically controlled switch, power amplifier and voltage follower.
National AN-110 (6 pg.)

16 **"+5 to −15 Volts DC Converter"**
(LM311)
Describes use of the LM311 comparator for this voltage conversion.
National Linear Applications Handbook, Vol. I, LB-18 (2 pg.)

17 **"General Purpose Power Supply"**
(LM395)
Diagrams a 25V, 10A supply using parallel LM395s for pass elements. elements.
National Linear Applications Handbook, Vol. II, LB-28 (2 pg.)

©IC MASTER 1978

LINEAR

Preamplifiers

1 **"Applications of the μA739 and μA749 Dual Preamplifier Integrated Circuits in Home Entertainment Equipment"**
See listing under (Linear) Consumer, Audio. (Fairchild)

2 **"Audio Handbook"**
See listing under (Linear) Consumer, Audio (National)

3 **"LM381 Low Noise Dual Preamplifier"**
(LM381)
Describes the circuit. Discusses application as various tape amplifiers, phono preamplifier, and an audio mixer.
National AN-64 (12 pg.)

4 **"LM381A Dual Preamplifier for Ultra-Low Noise Applications"**
(LM381)
Gives detailed description of circuit operations of LM381A.
National AN-70 (4 pg.)

5 **"IC Preamp Challenges Choppers on Drift"**
(LM108A, LM121)
Describes circuit of the IM121 preamplifier and discusses offset balancing, achieving of low drift, and typical operating performance. Also covers effects of the associated operational amplifier citing the LM108A as an example.
National AN-79 (8 pg.)

6 **"Versatile IC Preamp Makes Thermocouple Amplifier with Cold Junction Compensation"**
(LM321, LM308A)
Discusses use of LM321 preamp with LM308A operational amplifier to form a precision, low-drift operational amplifier that also acts as a cold junction compensator.
National Linear Application Handbook, Vol. II, LB-24 (2 pg.)

Regulators

7 **"The Voltage Regulator Applications Handbook"**
(μA104, μA105, μA109, μA723, μA7600, μA7800, μA78L00, μA78M00, μA79E00)
Gives specifications and parameters for various IC regulators and includes a selection guide. It devotes two chapters to each major regulatory family, the first chapter describes design and electrical characteristics, the second discusses electrical and thermal considerations which are useful as application guidelines.
Includes appendices covering switching regulator and power supply design and a guide to the selection and operation of suitable power transistors. Applications of 7800 and 78M00 include fixed output, current and dual polarity regulators.
The 79E00 applications include use as a high current negative voltage regulator. The 723 is discussed in 150 mA maximum, positive shunt regulators with high line rejection or high input voltage, floating positive regulators, medium/high output current negative regulators, and several other applications.
The 104, 105, and 109 applications include high current, switching and floating regulators.
Fairchild Voltage Regulator Applications Handbook (96 pg.)

8 **"Designing Digitally-Controlled Power Supplies"**
(MC1406, MC1408, MC1466, MC1723)
Discusses two approaches to designing power supplies, one using the MC1723 voltage regulator, the other using the MC1466 floating regulator with optoelectronic isolation. Also discusses BCD-to-binary converter and memory options.
Motorola AN-703 (8 pg.)

Regulators (cont)

9 **"A New Approach to Switching Regulators"**
Describes a 24 volt 3 ampere switching mode supply which operates at 20 kHz from a 120 volt AC line with 70% efficiency. Briefly discusses load-line shaping to reduce power losses and to reduce noise.
Motorola AN-719 (11 pg.)

10 **"Voltage Regulator Handbook"**
(MC78L00, MC78M00, MC7700, MC7800, MLM109, MLM209, MLM309, MC79L00, MC7900, MLM105, MLM205, MLM305, MLM104, MLM204, MLM304, MC1723, MC1469, MC1569, MC1463, MC1563, MC1468, MC1568, MC1466, MC1566, MC3420, MC3423, LM117, LM317, LM123, LM323)
Discusses basic voltage regulator theory and design including such relevant topics as series pass elements, heatsinking, layout, input power supply design, reliability, and troubleshooting. Also contains product data sheets.
Motorola $2.50 (202 pg.)

11 **"A Versatile, Monolithic Voltage Regulator"**
(LM100)
Circuit operation. Applications for the LM100 between 2 v to 30 v (up to 2 amps with two external transistors) are discussed. Includes high power, switchback current limiting, negative voltage, temperature compensating, and switching regulators.
National Linear Applications Handbook, Vol. I, AN-1 (11 pg.)

12 **"Designing Switching Regulators"**
(LM100)
LM100 applications discussed include high current, driven switching, current limiting, negative and high voltage regulators, as well as switching, and linear regulator combinations.
National Linear Applications Handbook, Vol. I, AN-2 (12 pg.)

13 **"Tracking Voltage Regulators"**
(LM104, LM105, LM204, LM205, LM304, LM305)
Describes adjusting several regulator voltages with one potentiometer, tracking positive and negative regulators using the LM104 as an amplifier, and tracking regulators with different output voltages.
National Linear Applications Handbook, Vol. I, LB-7 (2 pg.)

14 **"New Uses for the LM100 Regulator"**
(LM100)
Applications include shunt regulator, switching regulator with overload shutoff, temperature controller, power amplifier, SSB transmitter, light-intensity regulator, and photomultiplier tube supply.
National Linear Applications Handbook, Vol. I, AN-8 (12 pg.)

15 **"IC Regulators Simplify Power Supply Design"**
(LM104, LM105, LM204, LM205, LM304, LM305)
Describes use of LM104 and LM105, in 0.2 and 2A regulator circuits. Provides circuit construction hints.
National Linear Applications Handbook, Vol. I, LB-10 (2 pg.)

16 **"High Stability Regulators"**
(LM108A, LM109, LM208A, LM209, LM308A, LM309)
Describes design and gives schematics for high stability positive and negative regulators using LM109 and LM108A.
National Linear Applications Handbook, Vol. I, LB-15 (2 pg.)

Regulators (cont)

1 "Designs for Negative Voltage Regulators"
(LM104, LM204, LM304)
Describes the LM104 and covers pitfalls that cause unexpected failures as well as protection schemes. Including discussions of high current regulators, symmetrical power supplies, high voltage regulators, switching and high current switching regulators, and driven switching regulators.
National Linear Applications Handbook, Vol. I, AN-21 (16 pg.)

2 "The LM105 — An Improved Positive Regulator"
(LM105, LM205, LM305)
Describes the circuit of this regulator, power limitations, using booster transistors, foldback current limiting, and dominant failure mechanisms.
National Linear Applications Handbook, Vol. I, AN-23 (8 pg.)

3 "IC Provides On-Card Regulation for Logic Circuits"
(LM109, LM209, LM309)
Discusses design of regulators in general and describes the LM109. Covers application as a fixed 5V regulator, adjustable-output regulator, current regulator and high stability regulator.
National AN-42 (6 pg.)

4 "LM125/LM126/LM127 Precision Dual Tracking Regulators"
(LM125, LM126, LM127)
Circuit description, operation and applications, including current boosting, are discussed along with charts depicting external current limiting characteristics and a discussion of foldback current limiting. Electronic turn-off of the output without removing the input voltage is also described.
National AN-82 (15 pg.)

5 "LM340 Series — Three Terminal Positive Regulators"
(LM340)
Describes this 1 ampere regulator circuit. Applications: constant current source, high current regulator with short circuit current limit, 5 v regulator for TTL, adjustable output voltage regulators, tracking dual regulator, and high voltage regulators.
National AN-103 (12 pg.)

6 "Constant Current LED"
(NSL4944)
Describes how this two lead LED/IC device can be used not only as an indicator but also as a rectifier and constant current source.
National AN-153 (4 pg.)

7 "Applications for an Adjustable IC Power Regulator"
(LM117, LM217, LM317)
Covers basic LM117 circuit operation. Shows basic applications plus use for multiple outputs, current regulation, constant voltage/constant current, and a voltage to 2-wire (10-50 ma) current transmitter.
National AN-178 (4 pg.)

8 "Three-Terminal Regulator is Adjustable"
(LM117, LM217, LM317)
Covers basic LM117 circuit operation, overload protection circuits and operating considerations. Includes applications with logic shutdown, multiple regulators with single control, switching regulators and battery chargers.
National AN-181 (3 pg.)

Regulators (cont)

9 "Improving Power Supply Reliability with IC Power Regulators"
(LM117, LM217, LM317)
Describes various regulator circuit design practices to improve system reliability.
National AN-182 (3 pg.)

10 "Worst Case Power Dissipation in Linear Regulators"
(LM100, LM104, LM200, LM204, LM300, LM304)
Discusses problems of excessive dissipation in regulators and suggests solutions using LM100 and LM104.
National Linear Applications Handbook, Vol. I, LB-3 (2 pg.)

11 "Adjustable Three-Terminal Regulator for Low Cost Battery Charging Systems"
(LM317)
Discusses the ability to adjust the output of the LM317 voltage regulator as it relates to battery charging systems.
National LB-35 (2 pg.)

12 "A Novel FET Micropower Voltage Regulator"
Depicts the building of a micropower voltage regulator using FETs.
National FET Databook (2 pg.)

13 "Voltage Regulator Handbook"
(LM109, LM120, LM123, LM125, LM126, LM127, LM145, LM340, LM341, LM342, LM7800, LM78L00)
Covers product selection; heat flow and thermal resistance; commercial and custom heat sinks; applications of positive, negative and dual regulators; power supply design and includes data sheets for the product families listed above.
National Voltage Regulator Handbook, $3.00 (139 pg.)

14 "The 4195 Regulator"
(RC4195, RM4195)
Describes application as a ±15 v, 100 ma regulator; a ±2.5 a regulator; a ±15 to ±50 v unit, or a complementary ±3 to ±27 v device.
Raytheon Semiconductor Application Note (9 pg.)

15 "Applications of the CA3085 Series Monolithic IC Voltage Regulators"
(CA3085)
Circuit description of positive regulators with output currents up to 100 milliamperes from −55°C to +125°C. Applications include high-current and constant-current regulators; switching, dual-tracking and high-voltage regulators. Use as a general purpose amplifier, and various methods of current limiting are mentioned.
RCA ICAN-6157 (11 pg.)

16 "A Switching Regulator Using an RCA P-N-P Power Darlington Transistor"
(CA3085)
Gives a detailed discussion of a 28 v input, 4-16 v, 11 a, switching regulator.
RCA AN-6195 (8 pg.)

17 "Using a Dual-Polarity, Tracking Voltage Regulator"
(SG1501, SG2501, SG3501)
Describes the circuit and use of the SG1501 series of dual regulators.
Silicon General Applications Bulletin 1 (6 pg.)

©IC MASTER 1978

LINEAR

Regulators (cont)

1 **"Designing Switching Voltage Regulators with the TL497"**
(TL497)
Covers principals of operation and use as a step-down, step-up or inverting regulator.
Texas Instruments Application Report CA-189 (16 pg.)

Switches

2 **"Applications of the μA742 TRIGAC — A Zero Crossing AC Trigger"**
(μA742)
Describes this TRIGAC circuit. Includes a discussion of the transfer characteristics and performance plus operation from ac and dc supplies. Applications: 110 V ac single threshold control; single phase, 110 V ac dual threshold control with hysteresis; 110 V ac dual threshold control with time proportioning; with time proportioning for Y or Δ loads; operating with transformer isolation between control circuit and ac line; output pulse amplifier with transformer; output pulse inverter; period extender for time proportioning; initial cycle delay; sensor failure detection circuit; time delay "relay" circuit; 208V ac dual threshold control 110V ac, 400 Hz dual threshold control with single TRIGAC for Y loads.
Also includes a section listing parts and component location diagrams for these applications and discusses operation with a fixed dc supply. Covers use of the TRIGAC with nonresistive loads, discusses thyristor cells, and full wave output power switches for use with the device.
Fairchild (30 pg.)

3 **"Understanding and Applying the Analog Switch"**
(IH5001, IH5009, IH5025, IH5040)
Compares parameters of analog switches. Applications of several switch families are discussed, including 3-channel differential multiplexer, gain programmable amplier, gain ranging circuit, sample and hold circuit.
Intersil Application Bulletin A003 (16 pg.)

4 **"The IH5009 Series of Low Cost Analog Switches"**
(IH5009 Series)
Describes circuit parameters, logic compatibility, and virtual ground switching applications including 4-channel multiplexer, gain ranging circuit, gain programmable amplifier and 16-channel multiplexer.
Intersil Application Bulletin A0004 (8 pg.)

5 **"A New CMOS Analog Gate Technology"**
General discussion of "latch up." Describes "floating body" process, which eliminates this problem.
Intersil Application Note A006 (2 pg.)

6 **"Application of the MC3416 Crosspoint Switch"**
(MC3416)
Describes operation and use of this 4 × 4 balanced crosspoint switch in telephone applications including PABX. Appendices cover dielectric isolation, SCR action and testing.
Motorola AN-760 (15 pg.)

7 **"High Speed MOS Commutators"**
(MM451, MM453, MM454)
Discusses the lowered threshold voltages in commutators, on and off resistances, switching speed, noise and high-frequency noise control.
National Linear Applications Handbook, Vol. I, AN-28 (8 pg.)

Switches (cont)

8 **"Analog-Signal Commutation"**
(MM450, MM451, MM454, MM550, MM551, MM552)
Describes dc characteristics involved in MOS IC switching of analog signals when the signal input range varies between ± 10 v.
National Linear Applications Handbook, Vol. I, AN-33 (6 pg.)

9 **"Applications of MOS Analog Switches"**
(LH0014, LH0019)
Discusses basic commutation circuits and describes the use of the LH0014 and LH0019 in linear amplifier applications, including reset functions and chopper circuits. Covers use of MOS switches as suppressed carrier double-sideband modulators and double-sideband demodulators. Also describes a circuit for a phase-locked loop AM-FM detector without tuned circuits.
National Linear Applications Handbook, Vol. I, AN-38 (8 pg.)

10 **"PIN Diode Drivers"**
(DH0035, DH0035C)
Describes PIN diode switching requirements and application of DH0035 as a driver. Includes discussion of anode ground and cathode ground designs and of repetition rate considerations.
National AN-49 (6 pg.)

11 **"High Speed Analog Switches"**
(AM1000, AM1001, AM1002)
Discusses time domain multiplexing, current mode multiplexing, the switching characteristics of the AM1000 J-FET switches, and drive circuits.
National AN-53 (6 pg.)

12 **"Features and Applications of RCA IC Zero-Voltage Switches"**
(CA3058, CA3059, CA3079)
Discusses zero-voltage switch operation in general. Operation primarily with thyristors in ac power control and switching applications, including electric heating, oven/broiler control, machine control, light control and industrial systems.
RCA ICAN-6538 (6 pg.)

13 **"Applications of the RCA CA3062 IC Photo-Detector and Power Amplifier in Switching Circuits"**
(CA3062)
Describes circuit operation and application in a latched memory circuit, a light activated triac control, a triac control with automatic shut off and alarm, and a triac intrusion alarm system.
(RCA ICAN-6538 (6 pg.)

14 **"Some Applications of a Programmable Power Switch/Amplifier"**
See listing under (Linear) Power Control. (RCA)

15 **"FETs as Analog Switches"**
General discussion of FET operation: detailed discussion of factors affecting switch performance, including specific load problems and applicable driver circuits.
Siliconix AN72-2 (12 pg.)

16 **"IC Multiplexer Increases Analog Switching Speeds"**
(DG506, DG181)
Describes single and two level IC multiplexing systems, including the advantages and disadvantages of each.
Siliconix AN73-2 (5 pg.)

Switches (cont)

1 **"Switching High-Frequency Signals with FET Integrated Circuits"**
(DG133, DG171, DG181, DG200)
Discussion of DG133/171/181/200 as rf switches. Gives equivalent circuits. "Off" isolation and "On" performance data. Applications: control of video monitor and switching between two video cameras.
Siliconix AN73-3 (16 pg.)

2 **"Driver Circuits for the JFET Analog Switch"**
Discussion and comparison of resistor-coupled diode charge transfer, space transistor charge transfer, and switched resistor driver circuits for JFET switches.
Siliconix AN73-5 (12 pg.)

3 **"Analog Switches in Sample and Hold Circuits"**
Covers the effects of FET analog switch current handling capability on settling time and the effects of offset characteristics on sample and hold system accuracy. Describes inverting and non-inverting sample and hold circuits.
Siliconix AN74-2 (4 pg.)

4 **"CMOS Analog Switches — A Powerful Design Tool"**
Describes CMOS switch construction, characteristics and operating precautions. Applications include: a four channel switch to multiplex a scope input, a low pass filter with digitally controlled frequency response, an amplifier with programmable inputs and gain, a sample and hold circuit, a latching switch, high frequency switching and multiplexer systems.
Siliconix AN75-1 (16 pg.)

5 **"Designing with Monolithic FET Switches"**
Describes MOSFET and JFET switch operation plus driver considerations.
Siliconix TA73-2 (4 pg.)

6 **"Analog Switches and Their Applications"**
(DG300 series, DG506)
Introduces basic semiconductor theory and discusses in detail FET analog switches. Various circuit combinations including driver circuits, multiplexing, sample-and-hold circuits, N-path filters, and converters are also analyzed.
Siliconix $4.00 (324 pg.)

7 **"High Speed CMOS Analog Switches"**
(DG300 Series, DG181 Series)
Discusses the devices in low power, multiplexing, and thermocouple applications. (Includes AN76-6)
Siliconix (24 pg.)

8 **"Magnetically-Activated Monolithic Integrated Circuits for Analog and Digital Applications"**
(ULN-3006)
Discusses the Hall effect, digital sensing and experiments in linear sensing.
Sprague Electric TP 71-11 (10 pg.)

9 **"In IC Form Hall Effect Devices Can Take on Many New Applications"**
(ULN-3006)
Describes the Hall effect, suggests linear and digital applications.
Sprague Electric TP 71-12 (5 pg.)

10 **"Modes of Actuation for Type ULN-3006 'Hall Effect' Switches"**
(ULN-3006)
Describes magnetic operation of this non-contact, switching device.
Sprague Electric Application Note 27404.1 (4 pg.)

Switches (cont)

11 **"Suggested Output Loads for Type ULN-3006 'Hall Effect' Switches"**
(ULN-3006)
Diagrams connections to use the open collector output to drive transistors, thyristors, TTL and MOS circuits.
Sprague Electric Application Note 27404.2 (2 pg.)

12 **"Specifying and Testing Multiplexers"**
Describes how Teledyne Philbrick defines and measures analog multiplexer parameters with emphasis on CMOS types.
Teledyne Philbrick Applications Bulletin AN-31 (4 pg.)

Thermal Considerations

For Temperature Sensors see (Linear) Transducers

13 **"Thermal Evaluation of Integrated Circuits"**
Describes four methods for thermal evaluation, including reverse biasing substrate diodes.
Fairchild Application Note 205 (8 pg.)

14 **"Mounting Procedure for, and Thermal Aspects of, Thermopad Plastic Power Devices"**
Covers various methods of mounting and heat-sinking Motorola case number 77, 90, and 199 plastic power devices. Also discusses thermal resistance considerations, lead forming, and circuit board cleaning.
Motorola AN-290B (9 pg.)

15 **"Transient Thermal Resistance — General Data and Its Use"**
Discusses transient thermal resistance and its use and describes methods using various degrees of approximations to determine the junction temperature rise of a device. Also covers the concept of a duty cycle family of curves to simplify calculation of junction temperature rise under a repetitive pulse train.
Motorola AN-569 (15 pg.)

16 **"Mounting Techniques for Metal Packaged Power Semiconductors"**
Discusses preparation of mounting surfaces, using thermal compounds, and fastening techniques. Gives typical interface thermal resistance for a number of packages.
Motorola AN-599 (5 pg.)

17 **"Low Cost LED Thermometer"**
See listing under (Linear) Transducers. (National)

18 **"Micropower Thermometer"**
See listing under (Linear) Transducers. (National)

19 **"Thermal Resistance of Integrated Circuit Packages"**
Describes method of measuring package thermal resistance while package is immersed in a constant-temperature, circulating oil bath that acts as an infinite heat sink.
Sprague Electric TP 72-7 (5 pg.)

20 **"Thermal Design for Plastic Integrated Circuits"**
(ULN-2277)
Discussion of chip power dissipation—using amplifier as an example, heat dissipation, ULN-2277 dual 2-watt audio power heat sinks, heat sink finishes, and forced air cooling.
Sprague Electric TP 74-1 (7 pg.)

©IC MASTER 1978

LINEAR

Thermal Considerations (cont)

1 **"New Heat Sinking Techniques for Hermetic DIPs"**
Describes use of stamped and extruded heat sinks and method of reversing IC die and bonding chip directly to Kovar base.
Sprague Electric TP 74-4 (4 pg.)

Timers

2 **"Single-Chip Frequency Synthesizer Employing the XR2240"**
(XR2240)
Describes use of this timer/counter as a single-chip frequency synthesizer: $f_o = f, (m/n + 1)$ Where $f_o < 200$ kHz. Describes generating 100 Hz synchronized to 60 Hz line.
Exar TB-1003 (3 pg.)

3 **"Precision Timer"**
(ZN1034E)
Explains the device and its use in various applications including a wiper control, a metronome, and a battery charger.
Ferranti Electric (19 pg.)

4 **"Versatile Timer Operates from Microseconds to Hours"**
(LM122)
Describes the LM122 circuit and its operation. Includes discussion of pin functions, timing errors and noisy environments. Discusses use as various timers, as a pulse width detector, a comparator, an oscillator, a two-terminal time delay switch, and a frequency to voltage converter.
National AN-97 (12 pg.)

5 **"Using National Clock Integrated Circuits in Timer Applications"**
(MM5309, MM5311, MM5312, MM5315)
Describes demultiplexing techniques to generate time intervals and low frequency square waves. Gives as an example a fail-safe lighting timer.
National AN-143 (4 pg.)

6 **"1.3 Volt IC Flasher, Oscillator Trigger, or Alarm"**
(LM3903)
Describes circuit operation. Covers various flasher, tone generator and trigger circuits, especially for low voltage applications in anything from toys to laboratory equipment.
National AN-154 (10 pg.)

7 **"MM5865 Universal Timer Applications"**
(MM5865)
Provides block diagram and system description, discusses general timing and programming capabilities, suggests timing and counting applications.
National AN-168 (10 pg.)

8 **"A 4-Digit, 7-Function Stop Watch/Timer"**
(MM5865)
Gives detailed instructions for the circuit and construction of a 4-digit, 7-function timer with a display resolution of 0.01, 0.1, and 1 second, using the MM5865.
National AN-169 (14 pg.)

9 **"Problem Solving with the Dual Set Point Timer"**
(DF215)
Describes the device and its use as various timers and controls.
Siliconix AN76-2 (10 pg.)

Transducers

10 **"The LX1602A Pressure Transducer and Altimeter Applications"**
(LX1602A)
Describes how to use this transducer along with additional electronics to build an altimeter that operates over a range of −1,000 feet to +50,000 feet.
National AN-91 (3 pg.)

11 **"Installation Ideas for Pressure Transducers"**
(LX1600, LX1700, LX1400, LX1701)
Provides suggestions for mounting National transducers for various applications. Includes diagrams and typical mounting configurations.
National AN-92 (4 pg.)

12 **"Transducers in Fluid Flow Applications"**
(LX1602A)
Discusses application of LX1602A in pressure vessel, open flow and closed flow applications.
National AN-93 (8 pg.)

13 **"LX Series Pressure Transducers: Design and Applications Information"**
(LX1600A, LX1601A, LX1602A)
Describes hybrid transducer circuit and applications, including pressure to frequency converter, latching altitude detector, digital readout barometer and altimeter.
National AN-94 (8 pg.)

14 **"Pressure Transducer Load Cell"**
(LX1700G)
Describes use of LX1700G pressure transducer to measure weight.
National AN-95 (4 pg.)

15 **"Pressure Transducers as Accelerometers"**
(LX1700G)
Discusses uses of accelerometers and describes scheme of converting LX series pressure transducers to cover ranges from fractions to thousands of g's.
National AN-96 (4 pg.)

16 **"A New Interfacing Concept: The Monolithic Temperature Transducer"**
(LX5600, LX5700)
Covers alternate methods of powering the LX5600, load isolation and an unusual active thermal shield (the shield tracks the surface temperature of the sensor.) Describes use as a thermal transducer, temperature to frequency converter, and a temperature controller with rate-of-change sensing. Discusses use of differential temperature measurements for liquid or moving air detection (including) wind) and for position sensing (using a heat source as a position reference.
National AN-132 (10 pg.)

17 **"Micropower Thermometer"**
(LX5600)
Describes use of the LX5600 as a thermometer whose ouput is a current proportional to temperature and can drive a meter for direct readout.
National Linear Applications Handbook, Vol. II, LB-27 (2 pg.)
(LX5700)

18 **"Low Cost LED Thermometer"**
Presents circuit for a −40° to 100°C thermometer with a conversion circuit for −40° to 199°F.
National Linear Applications Handbook, Vol. II, LB-30 (2 pg.)

Transducers (cont)

1 **"Crystal Oven Controller and Precision Voltage Reference"**
(LM199,, LM299, LM399, LM199A, LM299A, LM399A)
Shows the use of the LM199 both as an oven temperature controller and a voltage reference at the same time.
National Linear Applications Handbook, Vol. II, LB-31 (2 pg.)

2 **"Simple Temperature Control"**
(LX5600)
Discusses setting up a temperature control system using the LX5600.
National LB-36 (2 pg.)

3 **"The Multi-Level Switch Kit, Part No. SK1007"**
Details the use of any LX series pressure transducer to produce a high level analog output as well as three independent switch points.
National TB-1 (2 pgs.)

4 **"Transducer Sensor Diaphram 15 Million Cycle Life Test"**
Findings in the continuing test of National's transducer sensing elements — a silicon membrane approx. 1 mil. thick.
National TB-3 (1 pg.)

5 **"Use of the SK1007 Pressure Transducer Kit in Vault Alarm Systems"**
Describes application of this multi-level switch kit with a pressure transducer in vault alarm systems.
National TB-7 (2 pg.)

6 **"Transducer Fluid Filled Option"**
Describes the "Fluid-Filled" methods of protecting transducers from hostile environments. Rates the resistance of silicone rubber to some common fluids.
National TB-8 (2 pg.)

7 **"REF-02 Temperature Controller"**
(CMP-02, REF-02)
Describes temperature control using the REF-02 and the CMP-02 comparator.
Precision Monolithics AB-4 (1 pg.)

8 **"Thermometer Application of the REF-02"**
(REF-02)
Discusses thermometer essentials, bandgap voltage reference theory, and basic circuit design using device.
Precision Monolithics AN-18 (4 pg.)

Voltage References

9 **"1.2 Volt Reference"**
(LM113, LM313)
Describes the LM113 temperature compensated shunt regulator diode. Applications: low voltage regulator circuits, bias current source for a differential amplifier, and an electronic thermometer circuit.
National Linear Applications Handbook, Vol. I, (N-56 (4 pg.)

10 **"IC Voltage Reference has 1 PPM per Degree Drift"**
(LM199, LM299, LM399, LM199A, LM299A, LM399A)
Describes this device with a sub surface Zener and an on-chip temperature stabilizer. Several applications are also covered.
National Linear Applications Handbook, Vol. II, AN-161 (6 pg.)

Voltage Reference (cont)

11 **"IC Zener Eases Reference Design"**
(LM129, LM329)
Describes LM129 circuit and operation. Covers use in voltage reference and regulator applications.
National AN-173 (3 pg.)

12 **"References for A/D Converters"**
(LM199, LM399, LM199A, LM399A)
Discusses requirements of references for various accuracies of A/D converters. Gives reference circuit designs.
National AN-184 (4 pg.)

13 **"A Micropower Voltage Reference"**
Describes a voltage reference made by operating a JFET slightly below pinch-off along with an op amp to convert current to voltage.
National Linear Applications Handbook, Vol. II, LB-34 (2 pg.)

14 **"Crystal Oven Controller and Precision Voltage Reference"**
See listing under (Linear) Transducers (National)

©IC MASTER 1978

MEMORY

Analog

1 "Delaying AF Signals with MOS Delay-Lines TCA350"
(TCA350)
Discusses bucket brigade circuits and practical applications employing this device.
ITT Semiconductors (pg. 7)

2 "MOS Delay Lines"
(DM8000, DM8510, DM8830, MM506)
Covers use of MOS shift registers to build delay lines.
National MB-4 (2 pg.)

3 "Acoustic Applications of Serial Analog Delay Devices"
(SAD1024)
Covers use in reverberation, vibrato, chorus, wow and flutter control plus considerations in using this device.
Reticon Application Note 104 (8 pg.)

4 "Bucket Brigade Devices Circa 1976"
Gives history of development, construction features, and advantages of bucket brigade devices.
Reticon Technical No. 107 (11 pg.)

5 "A Tapped Analog Delay for Sampled Data Signal Processing"
Introduces tapped analog delays and gives various applications heretofore accomplished by digital techniques.
Reticon Application Note No. 105 (11 pg.)

6 "Serial Operation of Clocked Analog Delay Lines to Obtain Long Delay"
(SAD1024)
Describes advantages, coupling, and performance of device.
Reticon Application Note No. 109 (8 pg.)

7 "Implementation of Discrete-Time Analog Filter and Processing Systems"
(TAD32)
Discusses tapped analog delay device operation and areas of application, including transversal and recursive filters.
Reticon Application Note No. 111 (10 pg.)

8 "Charge Transfer Devices for Sampled-Data Processing"
Discusses the application of charge transfer devices to analog and digital signal processing. Compares CTD devices. Describes Tapped Analog Delay, the Binary Analog Correlator, the Analog Correlator and the Transversal Filter.
Reticon Application Notes No. 114 (11 pg.)

CAMs

9 "Designing with the SCM5533 CMOS Content Addressable Memory"
(SCM5533)
Describes operation, matching, expansion, multifield association, pattern recognition, learning and a target acquisition system.
Solid State Scientific AN-110 (14 pg.)

Character Generators

10 "A CRT Display System Using NMOS Memories"
(MC6545, MCM6570, MCM6571)
Discusses basic crt operation, character formation and describes the 8K-bit MCM6570 character generators. Describes a 128-character system in detail, including counter and retrace control, memory select, and address register sections.
Motorola AN-706A (15 pg.)

11 "American and European Fonts in Standard Character Generators"
(MM4240, MM5240, MM4241, MM5241)
Depicts the standard 64 character subsets for these devices.
National AN-57 (6 pg.)

12 "DM8678 Bipolar Character Generator"
(DM8678)
Explains the operation of the device and the various features which include circuit address latches, the line counter, the 7-bit shift register, and the output buffer.
National AN-167 (4 pg.)

13 "The Systems Approach to Character Generators"
See listing under (Memory) ROMs. (National)

14 "Digital Display Systems"
Using TTL compatible MOS ROMs to generate displays. Gives circuit diagrams and a sample readout.
National MB-8 (2 pg.)

15 "7 x 9 Display Character Generator"
Uses three MOS ROMs and some TTL logic to create a font of 64 7 × 9 dot-type characters. A circut diagram and suggested character forms are provided.
National MB-13 (2 pg.)

Interface

16 "The Recovery of Recorded Digital Information in Drum, Disk and Tape Systems"
Reviews methods for converting the analog signal obtained from a magnetic recording into digital format.
Motorola AN-711 (10 pg.)

17 "Applying Modern Clock Drivers to MOS Memories"
(DS0025, DS0026)
Covers use of 0025/26 drivers in MOS memory systems. Information includes selection of packages and heat sinks, power dissipation, rise and fall time, power supply decoupling, system clock line ringing and crosstalk, input coupling techniques, and sample calculations.
National AN-76 (12 pg.)

18 "Interfacing Circuits for MOS Dynamic Random Access Memories"
Discusses interfacing methods employing level shifters (TTL to MOS levels) with boosters, level shifters (MOS to TTL levels), and sense amplifiers.
Nortec Applications Note No. 25 Rev. A (3 pg.)

interface (cont)

1 **"Charge Pump Driver for 7001 Rams"**
(SN54508)
Defines a method for driving the charge storage pump input of a 7001 RAM. Provides a description of the basic storage pump RAM cell and the charge pump circuit diagram. Gives performance curves.
Texas Instruments Application Report CA-178 (6 pg.)

2 **"High Speed TTL Interfacing for 7001 Static RAMs"**
(SN75261, SN75365)
Illustrates interface techniques for driving the 7001 RAM chip-select input, and sensing the memory output.
Texas Instruments Application Report CA-179 (8 pg.)

Microprogramming

3 **"Tri-State Logic in High Speed Memories of Microprogrammed Computers"**
See listing under (Digital) TTL, General. (National)

4 **"How to Design with the 8X02 Control Store Sequencer"**
See listing under (Microprocessor) Systems (Signetics)

"Signetics Micro Assembler Reference Manual"
See listing under (Microprocessor) Programming (Signetics)

PROMs

5 **"Programming AMI S6834 and S5204A EPROMs"**
(S5204A, S6834)
Compares on-board versus dedicated-socket programming and suggestions on programming system design.
American Microsystems (3 pg.)

6 **"EA2708 EPROM Application Note"**
(EA2708)
Comments on read characteristics of the device and its use in microprocessor systems.
Electronic Arrays (8 pg.)

7 **"Programmable Read Only Memories"**
(93417, 93427, 93436, 93438, 93448, 93452, 93453)
Gives general background on PROMs, describes programming procedures, discusses power switching, address expansion, 8-bit binary to decimal decoding and programmed logic controller.
Fairchild Application Note 333 (16 pg.)

8 **"Application of the Intel 2708 8K Erasable PROM"**
(2708)
Covers characteristics, operation, programming and erasure, reduced power and interface.
Intel Application Note AP-17 (15 pg.)

9 **"Intel Memory Design Handbook"**
See listing under (Memory) RAMs (Intel)

10 **"Programming the MCM5003/5004 Programmable Read Only Memory"**
(MCM5003, MCM5004)
Discusses programming methods for this 64 × 8 bit memory, describes circuit and operation. Describes a simple programmer using five ICs and a more sophisticated version using 25 ICs offering automatic sequencing.
Motorola AN-550 (12 pg.)

PROMs (cont)

11 **"PROM Power-Down Circuits"**
(DM74S287)
Describes several ways to power-down bipolar, three-state PROMs.
National AN-171 (4 pg.)

12 **"A PROM Programmer for the SC/MP LCDS"**
(SC/MP, MM4204, MM5204)
Provides a method for the user of the SC/MP LCDS to program MM4204 PROMs. Using wire-wrap techniques the user can construct a programmer that plugs into the SC/MP LCDS backplane and programs a 512 x 8 PROM in 10 seconds.
National AN-189 (23 pg.)

RAMs

13 **"Application of First-In First-Out Memories"**
(Am2812, Am2813, Am2814, 3341)
Describes the function of a first-in, first-out memory, methods of constructing FIFO buffers and the operation of the above P-channel MOS devices. Discusses storage and control, expansion methods, interfacing, and applications in an N-bit shift register and as a key encoder on key matrix.
Advanced Micro Devices Application Note (9 pg.)

14 **"The AM9338 Multiple Port Memory"**
(9338)
Describes applications for this 8-word by 1-bit three-address memory, including the working store for high-speed, three address computers; first in, first out (asynchronous buffer) memory; and direct address/indirect address memory.
Advanced Micro Devices Application Note 4 (pg.)

15 **"Application of the EMM/SEMI 4200 Static RAM to the Intel 8080A Microprocessor"**
(4200)
Describes suggested logic interface to connect this 4K × 1 static RAM to 8080A MPU.
EMM/Semi Application Note S103A (4 pg.)

16 **"Application of EMM/SEMI 4K Static RAM to Motorola M6800 Microprocessor"**
(4200)
Describes suggested logic interface to connect this 4K × 1 static RAM to the M6800 MPU.
EMM/Semi Application Note S104 (6 pg.)

17 **"Checking Out the EMM/Semi 4200 in 2107B or 4060 Sockets"**
(4200)
Suggests circuit changes to permit acceptance of the 4200 static RAM in sockets wired for 2107B or 4060 Sockets.
EMM/Semi Application Note S102 (2 pg.)

18 **"TTL/MSI 9334 8-Bit Addressable Latch"**
(9334)
Describes operation and applications, including 16 and 32-bit addressable latches, 16-word by 4-bit memory, demultiplexer and decoder, 8-bit A/D converter and a 16-bit serial-to parallel converter.
Fairchild Application Note 220 (8 pg.)

19 **"Understanding the FIFO"**
(3351)
Covers 3351 FIFO operation, cascading, plus use in data rate buffering, parallel operation, and burst operation.
Fairchild APP 332 (8 pg.)

©IC MASTER 1978

MEMORY

RAMs (cont)

1 "Designing Non-Volatile Memory Systems with Intel's 5101 RAM"
(5101)
Describes internal circuits and operation of the RAM. Outlines circuit techniques for battery supported non-volatile operation. Describes use of the device with the MCS-40 microcomputer.
Intel Application Note AP-12 (28 pg.)

2 "Which Way for 16k?"
Considers various aspects of 16k RAMs including 64 and 128 cycle refresh and the advantages versus disadvantages of latching.
Intel Application Note AP-22 (7 pg.)

3 "Applications of the Intel 2104A 4k RAM"
(2104A)
Discusses operation of the device including power distribution and decoupling.
Intel Application Note AP-23 (13 pg.)

4 "MOS Static RAMs"
(2101, 2102, 2111, 2112, 5101)
Presents devices, failure mechanisms, testing methods and results.
Intel RR-9 (7 pg.)

5 "2416 16K CCD Memory"
(2416)
Describes device, failure modes, reliability tests and results.
Intel RR-11 (5 pg.)

6 "Intel Memory Design Handbook"
(1103, 2107A, 2107B, 2416, 3207A, 3222, 3245, 5101, 5235, 5244)
Combines various RAM, ROM, PROM and CCD application notes plus information on support circuits.
Intel $5.00 (265 pg.)

7 "AMS7001 Basic Storage Module High Speed Memories"
(7001)
Discusses AMS7001 storage module operation, backplane wiring, addressing scheme, and power requirements.
Intersil AN-35 (18 pg.)

8 "Using the TM-200 Semiconductor Memory Card"
(7001)
Describes this memory card using the AMS7001 RAM. Includes detailed diagrams.
Intersil AN-36 (22 pg.)

9 "Layout Considerations Using 4K MOS RAMs"
Discusses orientation, packing, drivers, power distribution, trace widths, signal levels, bypass caps, and bus bars.
Intersil AN-37 (4 pg.)

10 "CMOS RAMs"
(IM6508, IM6523, IM6524)
Provides a block diagram and describes the operation and interface requirements for these 256 × 1 and 1024 × 1 CMOS RAMs.
Intersil Application Bulletin M002 (8 pg.)

11 "Considerations for Designing a High Density, Low Power Memory System"
(MK4200)
Describes a 16K × 8 memory array using the MK4200 4K RAM and CMOS logic.
Mostek (3 pg.)

RAMs (cont)

12 "An In-Depth Look at Mostek's High Performance MK4027"
(MK4027)
Describes operation of this 16-pin, 4K RAM.
Mostek (15 pg.)

13 "Why 'Edge-Activated' Static Memories?"
(MK4104, MK4114, MK32000, MK36000)
Describes these devices with static memory cells and dynamic peripheral circuitry. Compares performance to fully static devices.
Mostek (4 pg.)

14 "A Non-Volatile Microprocessor Memory Using 4K N-Channel MOS RAMs"
(MCM6605, MC6800)
Describes the design of a 8192-byte non-volatile memory using the MCM6605 4K × 1 RAM and CMOS control logic to reduce the power requirement in the standby mode.
Motorola AN-732A (17 pg.)

15 "The Design of an N-Channel 16K x 16-Bit Memory System for the PDP-11"
(MCM6605, MC3450, MC3452, MC3459, MC3460)
Briefly describes operation of the MCM6605 NMOS RAM, the details, the design of a PDP-11 add-on mainframe memory using this device. The interface ICs and system performance are also discussed.
Motorola AN-740 (15 pg.)

16 "A CMOS Keyboard Data Entry System for Bus Oriented Memory Systems"
(MC14419)
Describes a keypad to binary data entry system for placing data in RAM memories. It allows data to be entered through keystrokes, encoding 4-bits at a time.
Motorola Application Note AN-759 (4 pg.)

17 "Semiconductor for Plated Wire Memories"
See listing under (Digital) Interface. (Motorola)

18 "A High Speed FIFO Memory Using the MECL MC10143 Register File"
See listing under (Digital) High Speed Logic (Motorola)

19 "A Method of Implementing Stacks with Existing Minicomputer Memory"
Gives detailed description of a controller for a stock of programmable size up to 256 words for a 16-bit minicomputer with less than 16k of memory. Tells how stack size can be increased to 4096 words by adding ten ICs.
National AN-60 (4 pg.)

20 "Using Tri State™ Logic for Rubber Band Memories"
Describes the construction and use of scratch/pad memories to store data at a rapid rate and then release it as required. They serve as buffers between systems operating at different clock rates.
National AN-68 (4 pg.)

21 "A Simple Power Saving Technique for the MM5262 2k RAM"
(MM5265)
Describes method for decoding the clocks of unselected chips in a memory array to save power. Discusses application in 8k × 16 memory.
National AN-86 (4 pg.)

RAMs (cont)

1 **"Designing Memory Systems Using the MM5262"**
(MM4262, MM5262)
Provides a detailed description of this 2048 × 1 PMOS dynamic RAM, operating instructions, and a diagram of a 16K × 10 memory using the device.
National AN-144 (14 pg.)

2 **"Pulsed Power Supply Operation of Selected MM2102 Static RAM"**
(MM2102, SM1480)
Covers method for operating selected 2102s (SM61480s) in a power-down mode.
National AN-172 (3 pg.)

3 **"MOS Scratch Pad/Content Addressable Memory System"**
Describes a 64-bit Scratch Pad/Content Addressable Memory using MOS devices. Includes circuit diagrams and discusses circuit operations.
National MB-11 (2 pg.)

4 **"Memory Systems Built with the Nortec 6002"**
(6002)
Describes circuits for the bit driver/sense amplifier required to interface the 6002 with TTL. Discusses external support circuit parameters and internal circuit operations that affect system performance.
Nortec Applications Note No. 28 (4 pg.)

5 **"Memory Systems Built with the Nortec 6002"**
(6002)
Describes use of this 1024-bit RAM in building a general purpose memory module with 425,984 bit capacity.
Nortec Applications Note No. 30 (14 pg.)

6 **"Printed Circuit Layout Considerations for Dynamic Memory Arrays"**
Gives P.C. layout guidelines for MOS dynamic memories (also applicable to standard TTL circuits.)
Nortec Applications Note No. 31 (2 pg.)

7 **"Designing Memory Systems with the Nortec 6003 RAM"**
(6003)
Describes operation of this 2048-bit RAM, including a discussion of memory timing, refresh control, array control signals, device output sensing, and array driver circuits.
Nortec Applications Note No. 32 (9 pg.)

8 **"Memory Systems Characteristics and Applications for the CD4061A"**
(CD4061A)
Describes basic device operation, application in memory systems, and testing including construction of an all CMOS memory tester.
RCA ICAN-6445

9 **"Driving the TMS4030 RAM Using the SN75363 or SN75322"**
(SN75322, SN7536, TMS4030)
Driving the TMS4030 chip enable clock with these ICs, switching speeds versus system size, general performance characteristics and performance comparisons are provided.
Texas Instruments Application Report CA-181 (7 pg.)

RAMs (cont)

10 **"Memory System Design Utilizing TMS4050/4051 4k Dynamic RAMs"**
(TMS4050, TMS4051)
Reviews speed considerations, then steps through drafting a 4k dynamic RAM system. Two sample circuit examples are outlined.
Texas Instruments Application Report MOSA1 (56 pg.)

11 **"Introduction to Refreshing TI 4k Dynamic RAMs"**
(TMS2102, TMS4051)
Methods of refreshing dynamic RAMs are discussed. Compares static RAMs with dynamic RAMs also.
Texas Instruments Application Report MOSA3 (12 pg.)

ROMs

12 **"Using the EA4600 ROM in M6800 Microcomputer Systems"**
(EA4600)
Takes up use of the ROM for use as memory, an I/O device, or as a data converter in the microcomputer system.
Electronic Arrays M-16 (14 pg.)

13 **"ROM Application Note"**
(EA2708, EA3200, EA4700, EA8308A, EA8316E)
General discussion of ROMs and characteristics of each device.
Electronic Arrays (11 pg.)

14 **"Interfacing of the EA4900 16K ROM in an MCS-4 Microprocessor System"**
(EA4900)
Considers timing, power supplies, and logic levels for interfacing these devices.
Electronic Arrays (8 pg.)

15 **"Monolithic Diode Matrices"**
Describes programming and use of diode matrices. Applications: teletypewriter coding matrix, decimal decode for displays, nines complement-BCD, shift register matrices, and ROMs.
Harris Application Note 206 (16 pg.)

16 **"Intel Memory Design Handbook"**
See listing under (Memory) RAMs (Intel)

17 **"MCS2026-002"**
(MCS2026-002)
Describes connections to use this demonstrator version of the 16K (2048 × 8) dynamic ROM, which can be used as an adder, counter, encoder, decoder or shift register.
MOS Technology Application Note MCS2026-002 (8 pg.)

18 **"Code Conversion with Semiconductor Read Only Memories"**
(MCM4000)
Describes methods for converting data from binary to BCD and vice versa, from the Hollerith to the common 8-bit codes, and from one 8-bit code to another.
Motorola AN-506 (13 pg.)

19 **"Replacing Sequential Logic with ROMs"**
Describes design methods for using ROMs to replace sequential logic, that is to replace designs that would require random or combinational logic with feedback loops.
Motorola AN-722 (19 pg.)

©IC MASTER 1978

MEMORY

ROMs (cont)

1 **"The Systems Approach to Character Generators"**
(MM5240, MM5241)
Discusses use of MM5240 and MM5241 ROMs in character generation. Includes discussion of CRT raster scan displays, refresh memory modulation, control logic, bipolar compatibility, printing applications, and raster scan systems.
National AN-40 (12 pg.)

2 **"The Application of ROMs"**
(MM5203, MM5230, MM5232, MM5240)
Describes applications of read only memories in table look up, code conversion and generation, character generation, random logic generation, and microprogamming.
National AN-61 (12 pg.)

3 **"Saving ROMs in High-Resolution Dot-Matrix Displays and Printers"**
(MM5232, MM5240, MM5241, DM8596, MM8597)
Describes two-stage, column-generation approach called "intermediate coding" that save more than 25% of ROM capacity when several ROM's are needed to store a font.
National AN-85 (8 pg.)

4 **"Custom ROM Programming"**
Gives forms for submitting truth tables for various National read only memories.
National AN-100 (8 pg.)

5 **"Trig Function Generators"**
Instead of simply cascading ROM to increase resolution and accuracy of the look-up tables, this note describes interpolation techniques to increase trig function accuracy with less memory.
National MB-10 (2 pg.)

6 **"MOS Goes Bipolar"**
See listing under (Memory) Shift Registers. (National)

7 **"Fast Multipliers Using TTL Read Only Memories"**
(SN74182, SN74H183, SN74283, SN74284, SN74285)
Reviews fundamental algorithm of binary multiplication. Shows use of ROMs for multiplication, two's complement multiplication, and truncated multiplications.
Texas Instruments Application Report CA-172 (11 pg.)

Shift Registers

8 **"A Random Pattern Generator for Testing Digital Delay Elements"**
Describes the use of a linear feedback shift register for digital testing.
Advanced Micro Devices Application Note (3 pg.)

9 **"Applications of Dynamic Shift Registers"**
(1402A, 1403A, 1404A, 1405A, Am2802, Am2803, Am2804, Am2805, Am2806, Am2807, Am2808)
Discusses dynamic shift register storage in general, clock timing, circuits for clock drivers, interfacing with TTL, and recirculating registers.
Advanced Micro Devices Application Note (7 pg.)

Shift Registers (cont)

10 **"Schottky TTL MSI Registers"**
(AM25S07, AM25S08, AM25909, SN54S174, SN54S175, SN54S194, SN54S195, SN74S174, SN74S175, SN74S194, SN74S195)
Describes these 4 and 6-bit registers, their operation and applications. Contains logic diagrams and function tables. Applications covered include: longer words, use with dynamic shift registers, selective bus storage, use as a LIFO memory, psuedo random feedback, unique counting codes, permutation of inputs, and use in arithmetic.
Advanced Micro Devices Application Note (16 pg.)

11 **"High-Speed Shift Registers Use TTL RAMs and Counters to do all the Shifting"**
Describes how to build a high speed shift register using a RAM accessed by counters.
Advanced Micro Devices (2 pg.)

12 **"9338 8-Bit Multiple Port Register"**
(9338)
Describes the features of this device, the TTL/MSI equivalent and parallel serial expansion capabilities. Covers use as three address arithmetic unit with eight registers, and use in a first-in first-out memory.
Fairchild Application Note 294 (6 pg.)

13 **"The MC7491A 8-Bit Serial Shift Register and the MC7495 4-Bit Shift Register"**
(MC5491A, MC5495, MC7491A, MC7495)
Describes operation of these devices and discusses application as shift counters, delay lines, buffers, serial-parallel converters, parallel-serial converters, ring counters, and parallel arithmetic units. Also describes use in a teletypewriter-computer interface system.
Motorola AN-530A (9 pg.)

14 **"The Logic Design of Shift Counters"**
See listing under (Digital) Counters. (Motorola)

15 **"Using Shift Registers as Pulse Delay Networks"**
See listing under (Digital) High Speed Logic (Motorola)
Microprocessors

MICROPROCESSORS

Applications

1 **"Application Techniques for the MCS-48 Family"**
(8748, 8048, 8355, 8243, 8755, 8155)
Introduces the MCS-48 family and describes the implementation of such subsystems as: analog input and output, the use of tables for function evaluation, receiving and transmitting serial code, and parity generation.
Intel Application Note AP-24 $1.00 (23 pg.)

2 **"Using Mosteks F8 Microprocessor in a Scanned Seven-Segment Display Application"**
(F8)
Discusses the advantages of the F8 as a numeric display interface in μP based devices.
Mostek (16 pg.)

3 **"Using Mosteks F8 in a Scanned Keyboard Application"**
(F8)
Discusses application of the F8 to eliminate hardware outside the processor to encode the keyboard. Uses a keyboard scanning technique.
Mostek (16 pg.)

4 **"A Floppy Disk Controller Using the MC6852 SSDA and Other M6800 Family Parts"**
(MC6852, M6820)
Discusses a floppy disk controller built using a synchronous serial data adapter as the primary data interface with the MPU. All non-data operation (seek, drive selection, etc.) in the controller are handled by a peripheral interface adapter.
Motorola AN-764 (17 pg.)

5 **"Data Acquisition Networks with NMOS and CMOS"**
(MC14433, MC6800)
Discusses an 8-channel data acquisition network using the MC14433 A/D converter and the MC6800 microprocessor.
Motorola AN-770 (11 pg.)

6 **'A CRT Terminal Using the M6800 Family"**
(MC6800)
Describes a CRT controller for "glass-teletype," smart, programmable, and intelligent CRT terminals. The display format is 24 rows of 80 characters using a Motorola M3000 Video Monitor.
Motorola AN-771 (13 pg.)

7 **"MOS Delay Lines"**
(MM506)
Describes the characteristics of static and dynamic shift registers used in delay line. Discusses application as series/parallel delay lines and as substitutes for magnetic drum memories. Also covers specialized clocking techniques, such as two-speed clocking.
National AN-25 (8 pg.)

8 **"High Voltage Shift Registers Move Displays"**
(MM5081)
Describes use of the MM5081 high voltage shift register for driving gas discharge or lamp displays, i.e. moving messages or moving graphics.
National AN-44 (14 pg.)

9 **"Low Frequency Operation with Dynamic Shift Registers"**
Discusses operation of two forms of dynamic shift registers: ratioless and ratio. Recommends techniques, such as keeping clock amplitudes high, to design added margin into systems. Discusses temperature considerations, packaging.
National AN-55 (4 pg.)

Applications (cont)

10 **"Design Considerations of MOS Dynamic Shift Registers with Tri-State Outputs"**
(MM4012, MM4013, MM5012, MM5013)
Describes operation of MOS shift registers with Tri-State push-pull outputs. Includes discussion of the dynamic characteristics and maximum clock frequency.
National AN-65 (4 pg.)

11 **"MOS Goes Bipolar"**
Shows what voltages are required to combine MOS Shift Registers and Read Only Memories with bipolar devices. Presents interface diagrams.
National MB-12 (2 pg.)

12 **"Mask Programming Specializes MOS Shift Register Designs"**
(MM4007, MM4019, MM5007, MM5019)
Describes customizing MOS shift register bit lengths by programming a metalization mask used to manufacture these devices. Dual registers from 20 to 256 bits, and single registers from 40 to 512 bits are available. Describes single register taped output options.
National MB-14 (2 pg.)

13 **"Static Shift Register Operating Curves"**
How to use the minimum/maximum clock pulse width operating curves included in National's static shift register data sheets.
National MB-15 (2 pg.)

14 **"Double-Clocking Cuts Standard Registers to Non-Standard Sizes"**
Describes a method of double-clocking for N data input periods to make the register appear shortened by N bits. When this is achieved, the clock rate resumes normal frequency.
National MB-16 (2 pg.)

15 **"COS/MOS MSI Counter and Register Design and Applications"**
See listing under (Digital) CMOS (RCA)

16 **"HiNIL 375 Universal Shift Register"**
See listing under (Digital) HNIL/HTL (Teledyne Semiconductor)

17 **"M6800 Microprocessor Application Manual"**
(M6800)
Describes the use of the 6800 family of parts. Gives details of practical applications including the development of hardware and software, design of a point of sale terminal and interfaces to peripherals.
Motorola $25.00 (716 pg.)

18 **"Multiple Microprocessors in Instrument Systems"**
(IMP-8, IMP-16)
Discusses systems built with central microcomputers plus peripheral microprocessors to distribute intelligence. Illustrates concepts with a data acquisition and setpoint control system.
National AN-106 (8 pg.)

19 **"The IMP-8C as a Data Concentrator"**
(IMP-8C)
Describes the use of this microprocessor in data concentrator applications. Covers use with a full duplex modem, and the terminal controller interface.
National AN-113 (6 pg.)

©IC MASTER 1978

MEMORY

Applications (cont)

1 **"Data Handling with the IMP-8"**
(IMP-8, IMP-16)
Covers basic concepts for transferring data from a memory to peripherals.
National AN-117 (4 pg.)

2 **"Microprocessor Mates with MOS/LSI Keyboard Encoder"**
(IMP-16)
Shows how to interface a keyboard to the IMP-16 microprocessor for text editing.
National AN-128 (6 pg.)

3 **"For Data Communications Systems: A Front-End Preprocessor for 16-Bit Minicomputer Hosts"**
General discussion of how preprocessing techniques used in large-scale host computers can be scaled down for application in mini-based systems.
National AN-131 (4 pg.)

4 **"The IMP-16 in Communication Applications**
(IMP-16)
Discusses communication processor functions, requirements for communications microprocessors and system considerations. Gives programming examples including status monitoring, data transmission, message routing, interrupt handling and error control.
National AN-134 (6 pg.)

5 **"Communication Interfaces for the IMP-16"**
(IMP-16)
Describes the use of this microprocessor in leased line and switched line applications with the communications conforming to EIA standard RS232-C.
National AN-152 (13 pg.)

6 **"A Data Concentrator Using PACE"**
(PACE)
Describes the use of this microprocessor to take data from several slow speed lines and transmit it over one line.
National AN-164 (5 pg.)

7 **"Microprocessor Security Systems Made Easy"**
(SC/MP)
Describes program for sequencing through multiple inputs and actuating a simple output (relay, alarm, etc.) using NIBL.
National AN-174 (2 pg.)

8 **"Using Standard National Calculators in Industrial and Microprocessor Applications"**
Describes how to add low cost, low speed arithmetic capability using calculator components and standard logic.
National AN-176 (4 pg.)

9 **"SC/MP as an Analog-to-Digital Converter"**
(SC/MP)
Equations and diagrams for using the SC/MP as an A/D and D/A converter. Also lists sources of error that may result.
National AN-191 (3 pg.)

10 **"PACE Logic Designers Guide to Programmed Equivalents to TTL Functions"**
(PACE)
Shows how standard TTL/MSI logic functions and subsystems are implemented in software for the PACE microprocessor.
National $5.00 (131 pg.)

Applications (cont)

11 **"SC/MP Microprocessor Applications Handbook"**
(SC/MP)
Describes the SC/MP as a general purpose microprocessor covering applications, addressing, instruction set, implementing systems, buffering and interface. Covers use with A/D converters, keyboards, display systems, recorders and printers.
National $5.00 (160 pg.)

12 **"8X300 Computer to I/O Bus Emulator"**
(8X300)
Explains how the 8X300 system emulates a Microdata 1600 I/O bus. Shows how Microdata I/O bus compatible peripherals may be connected to and controlled by a standard 8X300 system.
Signetics (2 pg.)

13 **"8X300 CRT Controller"**
(8X300)
Describes how a CRT controller can be realized using the 8X300 Microcontroller.
Signetics (24 pg.)

14 **"8X300 Data Concentrator"**
(8X300)
Explains how the 8X300 can be used to multiplex low speed terminals.
Signetics (2 pg.)

15 **"8X300 Teletype Multiplexer"**
(8X300)
Explains how to easily interface an 8X300 to a teletype or similar asynchronous device. Also shows how an 8X300 can be used as a front end multiplexer for a large computer system.
Signetics (2 pg.)

16 **"Application Note for CRT5027"**
(CRT5027, CG5004L)
Discusses the configuration of a bus oriented, microprocessor based, CRT display system. Includes diagrams and flow chart.
Standard Microsystems (5 pg.)

17 **"TMS9900 Floppy Disk Controller"**
(TMS9900)
Illustrates use of the TMS9900 microprocessor system as floppy disk drive controller that interfaces to a RS-232C type terminal. Includes descriptions of hardware, diskette data transfer, and software.
Texas Instruments Application Report MOSA5 (68 pg.)

18 **"TMS9900 CRT Controller"**
(TMS9900)
Analyzes a CRT controller system that employs a TMS9900 microprocessor. Contains diagrams of the system and a software monitor routine.
Texas Instruments Application Report MOSA6 (32 pg.)

General

19 **"Distributed Data Processing"**
See listing under (Digital) Data Transmission (Burr-Brown)

20 **"A Non-Volatile Microprocessor Memory Using 4K N-Channel MOS RAMs"**
See listing under (Memory) RAMS (Motorola)

General (cont)

1 **"Microprocessors — An Introduction"**
Shows system components, defines terms and describes operation of an elementary computer system.
National AN-114 (4 pg.)

2 **"Increasing Throughput for IMP-16 Serial Input/Output"**
(MM5303)
Describes use of device to improve communication between microprocessor and peripheral with little increase in component count.
National AN-160 (7 pg.)

3 **"SC/MP Mates with Cassette Recorder"**
(SC/MP)
Describes a method of storing digital information on cassette tape.
National AN-166 (12 pg.)

4 **"Timesharing Users Manual"**
(IMP-8, IMP-16)
Gives user information to assemble IMP-8 or IMP-16 programs using Tymshare, Inc. services, or IMP-16 programs using the General Electric Computer Timesharing facility.
National (35 pg.)

5 **"Microprocessors — Why They Evolved and What They Are"**
Offers background material and describes common microprocessor terms.
National IB-1 (2 pg.)

Programming

6 **"Microprogramming Handbook"**
(2911, 2909, 29811, 2922, 29803)
Discusses microprogramming a bipolar processor. Includes sections on microprogram memory, sequencing, branching, jumping, and subroutines.
Advanced Micro Devices, $5.00 (44 pg.)

7 **"HM-6100 Microprocessor Basic 4K Software"**
(HMS6100)
Describes the Digital Equipment Corp. PDP-8 software.
Harris Application Note HM003 (4 pg.)

8 **"HM-6100 ROM Based Subroutine Calls"**
(HM6100)
Describes two methods for returning to the proper program location after executing a subroutine.
Harris Application Note HM008 (4 pg.)

9 **"Series 3000 Cross Microprogramming System CROMIS Reference Specification"**
(3000)
Describes the CROMIS microprogramming system for the 3000 series computing elements. It supports the user who wants to generate microcode.
Intel $5.00 (77 pg.)

10 **"8080/8085 Assembly Language Programming Manual"**
(8080A, 8085)
Primarily a reference manual, this manual describes the 8080/8085 instruction set, assembly language concepts, assembler directives, macros, programming techniques and interrupts.
Intel $5.00 (210 pg.)

Programming (cont)

11 **"PL/M-80 Programming Manual"**
(8080, PL/M-80)
Provides in readable format a complete description of the PL/M language as implemented by the PL/M-80 compiler.
Intel $5.00 (134 pg.)

12 **"MCS-48 and UPI-41 Assembly Language Manual"**
(8041, 8048, 8741, 8748, MCS-48, UPI-41)
Describes the assembly language for programming the MCS-48 and UPI-41 single device microcomputers. Covers procedures and controls for operating the assemblers to translate the source file into object code.
Intel $5.00 (192 pg.)

13 **"Series 3000 Microprogramming Manual"**
(3000)
Fundamentals of the 3000 series microprocessor and Cross Microprogramming System are described. Presents XMAS, XMAP languages and microprogramming techniques.
Intel $5.00 (73 pg.)

14 **"IM6100 CMOS Microprocessor Basic 4K Software"**
(IM6100)
Describes use of the Digital Equipment Corp. PDP-8 software.
Intersil Application Bulletin M003 (7 pg.)

15 **"ROM Based Subroutine Calls with the IM6100"**
(IMS6100)
Describes two methods for returning to the proper program location after executing a subroutine.
Intersil Application Bulletin M008 (6 pg.)

16 **"6500 Programming Manual"**
(MCS6500 Series)
Describes the software aspects of the 6500 microprocessor family and related support devices.
MOS Technology $6.95

17 **"F8 Programmer's Guide"**
(F8)
Describes how to write uprograms for the F8 microprocessor system which cause the system to function as a discrete logic element.
Mostek $5.95 (304 pg.)

18 **"M6800 Evaluation Module Users Guide"**
(M6800)
Provides general information, installation instructions, preparation and operating procedures for the M6800 evaluation module.
Motorola $5.00 (150 pg.)

19 **"M6800 Microprocessor Programming Manual"**
(M6800)
Provides information needed to program the unit, discusses the instruction set, source language, assembler, simulator, Build-Virtual-Machine and HELP programs. Gives program examples.
Motorola $10.00 (303 pg.)

20 **"IMP-16 Programming Techniques"**
(IMP-16)
Discusses several aspects of the instruction set to enable programmer to code more efficiently. Includes discussion of subroutines, subroute parameter passing, recursive subroutines, as well as sample programs.
National AN-111 (6 pg.)

©IC MASTER 1978

MICROPROCESSORS

Programming (cont)

1 **"A Microprogram Development System"**
(IMP-16)
Describes the application of microprogramming to LSI processors and the advantages of a microprogram development system for hardware and software.
National AN-123 (6 pg.)

2 **"IMP-8 Assembler Manual"**
(IMP-8)
Presents preliminary information on the use of IMP-8 assembler language.
National (60 pg.)

3 **"IMP-8 Programming Manual"**
(IMP-8)
Provides information for the programming of the IMP-8 family of microprocessors and microcomputers.
National (111 pg.)

4 **"IMP-8 Utilities Reference Manual"**
(IMP-8)
Provides information on the IMP-8 debugging program, loader programs, the standard teletype and I/O package, and the paper tape-punch package.
National (57 pg.)

5 **"IMP-16 Assembler Program Description Manual"**
(IMP-16)
Describes the internal structure of the IMP-16 Assembler. It covers the general organization, functions required for conversion to operate on a different machine, and a detailed subroutine and data description.
National (105 pg.)

6 **"IMP-16 Microsymbolic Assembler"**
(IMP-16)
The microsymbolic assembler is a collection of routines that make it possible to write microprograms for the IMP-16 in symbolic language. This manual describes the statements, character set and basic program elements.
National (21 pg.)

7 **"Installation of IMP-16 Assembler on System 360/370 Operator Manual"**
(IMP-16)
Provides information for installing the IMP-16 assembler and punch programs on an IBM 360-370 computer.
National (18 pg.)

8 **"PACE Assembly Language Programming Manual"**
(PACE)
Discusses writing assembly language or machine language programs. Coding conventions, I/O formats, and macros are also covered.
National $5.00 IPC-16S/969Y (110 pg.)

9 **"SC/MP Microprocessor Assembly Language Programming Manual"**
(SC/MP)
Covers an overview, Assembly Language, statements, programming techniques, macros and I/O formats.
National $5.00 (108 pg.)

10 **"Timesharing Manual for the RCA CDP1802 COSMAC Microprocessor"**
(CDP1802)
Discusses two assembly languages in the COSMAC software development package. Examines using the package, tells how to use it and develops a sample program.
RCA MPM-202 $10.00 (58 pg.)

Programming (cont)

11 **"Serial Input/Output"**
(2650)
Covers use of the Sense/Flag capability for serial input/output.
Signetics AS50 (3 pg.)

12 **"Bit and Byte Testing Procedures"**
(2650)
Describes several methods of testing the contents of the internal registers.
Signetics AS51 (4 pg.)

13 **"General Delay Routines"**
(2650)
Covers software routines to generate time delays.
Signetics AS52 (3 pg.)

14 **"Binary Arithmetic Routines"**
(2650)
Covers routines for binary addition, subtraction, multiplication and division.
Signetics AS53 (15 pg.)

15 **"Conversion Routines"**
(2650)
Covers Binary to BCD, BCD to ASCII, Hexadecimal to ASCII and vice versa.
Signetics AS54 (17 pg.)

16 **"2650 Initialization"**
(2650)
Covers start up procedures.
Signetics MP51 (1 pg.)

17 **"2650 Evaluation Printed Circuit Board"**
(2650)
Covers features and connections for this card level evaluation and design tool.
Signetics SP50 (14 pg.)

18 **"2650 Demo System"**
(2650)
Complete demonstration system when used with the 2650 PC1001.
Signetics SP51 (7 pg.)

19 **"Support Software for Use with the NCSS Timesharing System"**
(2650)
Covers a cross-assembler, cross-simulator and two utility programs (to load the 2650 and to burn PROMs.)
Signetics SP52 (7 pg.)

20 **"Simulator, Version 1.2"**
(2650)
Changes to the simulator.
Signetics SP53 (1 pg.)

21 **"Pipbug"**
(2650)
Program for the 2650 PC1001 demonstration card.
Signetics SS50 (13 pg.)

22 **"Absolute Object Format"**
(2650)
Describes the format of the absolute code.
Signetics SS51 (1 pg.)

Programming (cont)

1 **"Signetics Micro Assembler Reference Manual"**
(N2901, N3002, 8X02)
Describes this FORTRAN program developed as a design tool for writing microprograms. This microprogram defines his own assembly language, writes the microprogram, then assembles it to generate tapes to load memory. Suitable for most microprogrammed applications.
Signetics $4.00 (74 pg.)

Systems

2 **"AM2914 Priority Interrupt Encoder"**
(2913, 2914, 2900, 9080A)
Provides data sheet information on devices. Outlines construction of a microprogrammable, bipolar, LSI interrupt structure for the 2900 and 9080A processors using the 2914.
Advanced Micro Devices (33 pages)

3 **"The 8080A/9080A MOS Microprocessor Handbook"**
(8080A, 9080A, 8212, 8255, 9555, 8251, 9551)
Provides descriptions of the 9080A CPU and the associated clock generator and system controllers. Supplies data sheet information on various I/O interfaces, support circuits, and memories. An application section covers clock generation, memory system design, timing, interrupts, and multiplication.
Advanced Micro Devices, $7.95 (280 pg.)

4 **"A Microprogrammed 16-Bit Computer"**
(2901, 2902, 2914, 2913, 29705)
Presents computer design starting with the specification of a computer from a functional standpoint. Describes architectural units including the ALU, the Program Control Unit, and memory.
Advanced Micro Devices $5.00 (47 pg.)

5 **"S6800 Microprocessor Hardware Book"**
(S6800)
Provides System description and data sheets.
American Microsystems (72 pg.)

6 **"S6800 Hardware Reference Manual"**
(S6800)
Detailed descriptions of the system operation.
American Microsystems $15.00 (225 pg.)

7 **"F8 Microprocessor Application Manual"**
(F8)
Covers details concerning bit manipulation, RAM expansion of the I/O ports, subroutines and boot strap loaders.
Fairchild

8 **"Static Memory Systems Utilizing the HM-6100"**
(HM6100)
Describes CMOS, nonvolatile CMOS and NMOS memory systems.
Harris Application Note HM004 (7 pg.)

9 **"HM-6100 CMOS Microprocessor Teletype Interface"**
(HD6402, HM6100)
Describes a teletype interface using the HM6100 and a UART.
Harris Application Note HM005 (7 pg.)

10 **"HM-6100 Operator Console"**
(HM6100)
Describes the 6900-CONTRL console for the prototyping system.
Harris Application Note HM006 (4 pg.)

Systems (cont)

11 **"HM-6100 CMOS Microprocessor Memory Extension"**
(HM6100)
Discusses a memory extension controller to increase the memory from 4096 to 32,768 words.
Harris Application Note HM007 (4 pg.)

12 **"8255 Programmable Peripheral Interface Applications"**
(8255)
Provides hardware and software information for this byte oriented I/O device. Examples cover character printer, paper tape and 8080-8080 interface applications.
Intel Application Note AP-15 $1.00 (32 pg.)

13 **"Memory-Mapped I/O and Vectored Interrupts for Intel 4-Bit Microcomputer Systems"**
(4009, 4289)
Describes the expansion to 16 or 256 4-bit input ports, to 64 8-bit input ports, to vectored interupts, to vectored inputs and to 128 output ports.
Intel Application Note AP-19 (6 pg.)

14 **"Intel MULTIBUS Interfacing"**
(Multibus, 8080)
Describes this system bus structure, signals and characteristics. Includes electrical and mechanical information needed to build slave modules.
Intel AP-28 $1.00 421 pg.)

15 **"Simplify Your Dynamic RAM/Microprocessor Interface"**
(2104A, 2107A, 2107B, 2116)
Compares static and dynamic RAMs, then outlines elements of dynamic RAM/μP interface design including: refresh techniques, address multiplexing, memory overlap and transmission line effects.
Intel Application Note APR-1 $1.00 (65 pg.)

16 **"8080/8080A Microcomputer"**
(8080/8080A)
Presents device, failure mechanisms, testing methods and results.
Intel RR-10 (13 pg.)

17 **"8080 Microcomputer Systems User's Manual"**
(8080A)
Data sheets, architecture, timing requirements, and instruction sets for the MSC80 family.
Intel $5.00 (238 pg.)

18 **"MCS-48 Microcomputer User's Manual"**
(8048, 8748, 8035, 8155, 8243, 8355, 8755, MCS-48)
Describes the system architecture, instruction set, programming, expansion, hardware and software examples, extensive data sheets.
Intel $5.00 (305 pg.)

19 **"CPI-41 User's Manual"**
(8041, 8741, 8243, UPI-41)
Describes this Universal Peripheral Interface device operation, instruction set, system design and interfacing.
Intel $5.00 (115 pg.)

20 **"MCS-85 User's Manual"**
(8085, MCS-85)
Describes this 8085 based system and peripheral components. Extensive coverage through data sheets.
Intel $5.00 (273 pg.)

MICROPROCESSORS

Systems (cont)

1 **"Using the 8251 Universal Synchronous/Asynchronous Receiver/Transmitter"**
See listing under (Digital) Data Transmission (Intel)

2 **"Static Memory Systems for the IM6100"**
(IM6100)
Describes CMOS, nonvolatile CMOS and NMOS memory systems for the IM6100.
Intersil Application Bulletin M004 (14 pg.)

3 **"Teletype Interface for the IM6100 CMOS Microprocessor"**
(IM6100)
Describes a teletype interface using the IM6100 and a UART.
Intersil Application Bulletin M005 (10 pg.)

4 **"IM6100 Operator Console"**
(IM6100)
Describes the 6900-CONTRL console for the prototyping system.
Intersil Application Bulletin M006 (17 pg.)

5 **"IM6100 CMOS Microprocessor Memory Extension"**
(IM6100)
Discusses a memory extension controller to increase the memory from 4096 to 32,768 words.
Intersil Application Bulletin M007 (6 pg.)

6 **"A Powerful Microprogram Controller: The 67110"**
(65110)
Describes features of the device including organization, internal interrupts, and memory expansion.
Monolithic Memories (5 pg.)

7 **"5701/6701: 4-Bit Expandable Bipolar Microcontroller"**
(5701, 6701)
Provides functional descriptions of the device, instruction set, timing and more.
Monolithic Memories Application Note (23 pg.)

8 **"6500 Hardware Manual"**
(MCS6500 series)
Describes the hardware aspects of the 6500 microprocessor family and related support devices.
MOS Technology $6.95

9 **"TIM Manual"**
(MCS6530)
Describes the program contained in the ROM portion of the 6530-004.
MOS Technology $5.00

10 **"F8 Microprocessor Hardware Support-Evaluation Kit"**
(F8)
Describes this kit and its use. Includes a sample program to acquaint the user with F8 machine language and to program the kit.
Mostek (20 pg.)

11 **"Expanding Mostek's F8 Microprocessor External Interrupt Capability"**
(F8)
A detailed discussion of servicing control inputs in a F8 based system with emphasis on implementing interrupt driven systems.
Mostek (12 pg.)

Systems (cont)

12 **"Subroutine Neting and Multiple Interrupt Handling Using Mostek's F8 Microprocessor"**
(F8)
Discusses the use and implementation of subroutines and interrupts as they apply to programming an F8 based system.
Mostek (16 pg.)

13 **"Z80 Interfacing Techniques for Dynamic RAM"**
(Z80, MK4027, MK4116)
Provides specific examples of interfacing 16-pin dynamic memories to the Z80 microprocessor. Includes timing diagrams and refresh information.
Mostek

14 **"Analog-to-Digital Conversion Techniques with the M6800 Microprocessor System"**
(MC1405, MC6800)
Describes successive approximation and dual ramp techniques for A/D conversion using the M6800. Gives flow diagrams, source programs and schematics. Appendix gives program for binary to BCD conversion.
Motorola AN-757 (35 pg.)

15 **"A Simple High Speed Bipolar Microprocessor Illustrates System Design and Microprogram Techniques"**
(MC10801, MC10803)
Describes a complete bipolar LSI systems design using 10 ICs to perform 2's complement add, subtract, multiply and divide.
Motorola AN-744 (12 pg.)

16 **"MEK6800D2 Microcomputer Kit System Expansion Techniques"**
(MC6800)
Covers techniques to add 8K or 16K of memory, I/O port expansion, power-up auto-reset, switch selectable monitor operation, and RS-232 or current-loop data terminal operation.
Motorola AN-771 (23 pg.)

17 **"M6800 Systems Utilizing the MC6875 Clock Generator/Driver"**
(MC6875)
Gives extensive design examples using the MC6875 in systems including slow or dynamic memories, and DMA (multiprocessor) applications.
Motorola AN-775 (20 pg.)

18 **"M6800 System Microcomputer System Design Data"**
(M6800)
Describes the family of parts including data sheets.
Motorola (165 pg.)

19 **"Device Operation and System Implementation of the Asynchronous Communications Interface Adapter (MC6850)"**
See listing under (Digital) Data Transmission (Motorola)

20 **"Applications of LSI Processors"**
(IMP-16)
Describes system architecture and operation of IMP-16C, 16-bit parallel processor with self-contained memory. Describes applications in a data communication link analyzer, in point-of-sales and in retailing systems.
National AN-98 (8 pg.)

Systems (cont)

1 "Increasing the Number of Control Flags and Jump Conditions in the IMP-16C"
(IMP-16C)
Describes simple and economical method of increasing the number of testable jump conditions and the number of control flags on the IMP-16C microprocessor.
National AN-101 (4 pg.)

2 "Clock-Hold Schemes for the IMP Microprocessor Family"
(IMP-8C, IMP-16C)
Presents scheme to extend the clock-hold function for additional periods of the main system clock, using the DM8570 shift register.
National AN-105 (4 pg.)

3 "IMP-16 Interrupts"
(IMP-16)
Describes various type of interrupts, including an overview of interrupt structure, example of interrupt request and service, multi-level and control panel interrupts.
National AN-107 (23 pg.)

4 "IMP-16C Peripheral Interfacing Simplified"
(IMP-16C)
Explores techniques for interfacing peripheral devices to the microprocessor.
National AN-124 (4 pg.)

5 "IMP-16L DMA — What It Is and How to Use It"
(IMP-16)
Discusses general theory of the DMA Bus, gives examples of priority expansion and data transfer.
National AN-135 (6 pg.)

6 "Designing with the IMP Chip Set"
(IMP-16)
Describes some of the major considerations in the implementation of 4 to 32 bit systems using the IMP series of devices. A 16 bit system is covered in detail.
National AN-141 (10 pg.)

7 "Using a Microprocessor Beyond Apparent Speed"
(IMP-16)
Covers the concept of cycle stealing, a technique in which a peripheral device communicates directly with memory or another peripheral device while the CPU is doing work other than using the data and address buses.
National AN-142 (6 pg.)

8 "Number Cruncher (MM57109) Interface to Microprocessor"
(MM57109)
Describes the MM57109 number cruncher unit which can perform most arithmetic functions found in complex hand-held calculators and interfaces either to a microprocessor or a random logic system. Provides schematics of interface logic and a flow chart for initialization of the device.
National AN-186 (10 pg.)

9 "Clock Considerations For SC/MP-II"
(SC/MP)
Shows several methods of providing a clock for the SC/MP-II.
National AN-188 (4 pg.)

Systems (cont)

10 "Serial Data Transfers with SC/MP-II"
(SC/MP)
Discusses serial data I/O data transfer using the SC/MP-II extension register.
National AN-190 (3 pg.)

11 "Increasing the Number of JUMP Conditions and Control Flags in the IMP-4C"
(IMP-4)
Presents a method of providing eight control flags with the use of the RALU flag, and seven extra testable conditions.
National IB-2 (2 pg.)

12 "GCP/P Product Description"
(GCP/P)
Delineates the system, gives a functional description of the CROM and RALU devices, and presents the general purpose macroinstruction set. Appendices cover a microprogram to implement the IMP-16 instructions set and the use of the RALU status flag.
National (61 pg.)

13 "IMP-4 Technical Description"
(IMP-4)
Describes the general purpose instruction set, gives functional and system descriptions, describes the development system and shows specific programming examples.
National (77 pg.)

14 "IMP-8C Application Manual"
(IMP-8)
Describes the IMP-8C's operational features, functional and logic operation, and input/output interfacing in sufficient detail to permit the user to adapt the card to various applications.
National (119 pg.)

15 "IMP-8C/200 Microprocessor, IMP-8P Microcomputer Product Description"
(IMP-8)
Describes the IMP-8C microprocessor card and the IMP-8P prototyping tool (microcomputer) as systems.
National (10 pg.)

16 "IMP-16-L Product Description"
Describes the features of the IMP-16L general microcomputer system.
National (8 pg.)

17 "POWR I/O CROM Technical Description"
(IMP-16)
Describes the instruction repertoire and use of this unit which expands the variety of memory and input-output operations of the IMP-16.
National (22 pg.)

18 "PACE Technical Description"
(PACE)
Defines and explains how to use the hardware and software that support the PACE system.
National (96 pg.)

19 "PACE Microprocessor System Design Manual"
(PACE)
Introduces the PACE system and basic design requirements. Details memory interfacing and peripheral interface techniques.
National $5.00 1PAC-16A/928 (79 pg.)

©IC MASTER 1978

MICROPROCESSORS

Systems (cont)

1 **"N8080 System Design Manual"**
(INS8080A, DP8212, DP8216, DP8224, DP8226, DP8228, DP8238, INS8251, INS8255)
Describes the INS8080A μP including architecture, timing, data and instruction representation, and I/O operation and control. Also covers use of various support chips.
National $5.00 INS-8A/900 (72 pg.)

2 **"SC/MP Technical Description"**
(SC/MP)
Describes the SC/MP system plus its hardware and systems.
National (64 pg.)

3 **"Data Acquisition System Interface to Computers"**
See listing under (Linear) Converters (National)

4 **"A PROM Programmer for the SC/MP LCDS"**
See listing under (Memory) PROMs (National)

5 **"μPD371 Magnetic Tape Cassette/Cartridge Controller Users Manual"**
(μPD371)
Gives description, timing and circuit diagrams. Assembly language listing for use with NEC's 8080A.
NEC Microcomputers $10.00 (58 pg.)

6 **"μPD372 Floppy Disk Controller Users Manual"**
(μPD372)
Provides text, timing diagrams and schematics plus software listings.
NEC Microcomputers $10.00 (70 pg.)

7 **"μPD372 Mini-Floppy Disk Controller Users Manual"**
(μPD372)
Supplements the Floppy Disk Manual for Mini-Floppy applications.
NEC Microcomputers $10.00 (44 pg.)

8 **"MN1400 Series 4-Bit One-Chip Microcomputers User's Manual"**
(MN1400, MN1402, MN1498, MN1499)
Introduces the MN1400 family. Encompasses system architecture, timing, and the instruction set including examples of various commands and routines.
Panasonic (65 pg.)

9 **"Programmable Interval Timer and Counter for Use with RCA COSMAC Development Systems"**
(CDP1800)
Gives the circuits and logic diagrams for a programmable interval timer and counter for use with the COSMAC development systems. Discusses the commands used for its operation and gives four sample programs.
RCA ICAN-6482

10 **"Interrupt Priority Resolution Circuit for Use with RCA COSMAC Development Systems"**
(CDP1800)
Circuit and program for use when resolution in software is not sufficiently efficient.
RCA ICAN-6485 (3 pg.)

11 **"Adding Two-Level I/O Interface Capability to RCA COSMAC Development Systems"**
(CDP1800)
Circuit to expand I/O capability.
RCA ICAN-6486 (2 pg.)

Systems (cont)

12 **"Alphanumeric Display for Use with RCA COSMAC Development Systems"**
(CDP1800)
Circuit and program for self-scanning dot-matrix display.
RCA ICAN-6488 (3 pg.)

13 **"Analog-to-Digital Converter for Use with RCA COSMAC Development Systems"**
(CDP1800)
Circuit and program to use the Burr-Brown ADC55 12-bit converter.
RCA ICAN-6490 (2 pg.)

14 **"PROM Programmer for RCA COSMAC Development Systems"**
(CPD1800)
Circuit and program to program, copy, verify and list contents of 1702, 2704 and 2708 PROM's.
RCA ICAN-6491 (8 pg.)

15 **"Hexadecimal Keyboard Interface for Use with RCA COSMAC Development Systems"**
(CPD1800)
Circuit and program including debounce routine for 16 key keyboard.
RCA ICAN-6516 (2 pg.)

16 **"Guide to Better Handling and Operations of CMOS Interated Circuits"**
Recommends specific handling and operating practices to minimize the probability of damage in manufacturing and field environments.
RCA ICAN-6525 (5 pg.)

17 **"Register-Based Output Functions for RCA COSMAC Microprocessors"**
(CDP1802, CDP1852)
Describes circuits using the CDP1852 I/O port for outputting information from any of the 16 general purpose scratch pad registers of the CDP1802 microprocessor.
RCA ICAN-6562

18 **"Design of Clock Generators for Use with RCA COSMAC Microprocessor"**
(CDP1802)
Describes a crystal controlled clock generator using-on-chip circuits and crystal and RC generators using external circuits.
RCA ICAN-6565

19 **"Power-On Reset/Run Circuits for the RCA CDP1802 COSMAC Microprocessor"**
Provides diagrams and discussions of several circuits which enable a power-on reset/run capability for the device.
RCA ICAN-6581 (2 pg.)

20 **"User Manual for the CDP1802 COSMAC Microprocessor"**
(CDP1802)
Describes the device architecture and its instruction set with examples of each command. Reviews basic programming techniques and supplies timing diagrams.
RCA MPM-201A $5.00 (115 pg.)

21 **"Microprocessor Prototyping Card"**
(2650)
Describes features of the 2650PC1001 microcomputer.
Signetics Application Memo (2 pg.)

©IC MASTER 1978

Systems (cont)

1 **"A Guide to the Selection of Support Components for the Series 3000 Microprocessor"**
(N3001, N3002)
Categorizes the various components used to implement major sections of a typical microprocessor system.
Signetics AM-1 (4 pg.)

2 **A User's Guide to the Series 3000 Microprocessor Chip Set"**
(N3001, N3002)
Describes devices, instruction sets. Design examples included.
Signetics AM-2 (14 pg.)

3 **"Address and Data Bus Interfacing Techniques"**
(2650)
Discusses address and data bus drive requirements. Covers methods for increasing the system drive capability.
Signetics MP53 (8 pg.)

4 **"How to Design with the Control Store Sequencer, 8X02"**
(8X02)
Presents a functional description and gives microprogramming system suggestions.
Signetics Bipolar Application Memo 3 (6 pg.)

5 **"8X300 Input/Output Design"**
(8X300)
Describes typical interfacing techniques to the 8X300 using 8T32/33 or 8T35/36 bidirectional I/O ports.
Signetics (2 pg.)

6 **"8X300 Floppy Disk Interface"**
(8X300)
Describes the 8X300 control of a floppy disk drive with a minimum amount of additional circuitry.
Signetics (2 pg.)

7 **"8X300 Remote Alphanumeric Terminal Controller"**
(8X300)
Describes how an 8X300 interfaces to a simple keyboard/display device with a minimal amount of interface circuitry.
Signetics (2 pg.)

Systems (cont)

8 **"8X300 Interface to External Read/Write Memory"**
(8X300)
Explains how to connect the 8X300 Interface Vector (IV) bytes to the address, data and control lines of an external memory.
Signetics (3 pg.)

9 **"8X300 256 Way Branch"**
(8X300)
Explains how the 8X300 Execute instruction provides a fast and efficient method of converting one code structure to another in communications applications.
Signetics (1 pg.)

10 **"8X300 Fast IV Select"**
(8X300)
Explains how the Interface Vector (IV) bytes and working storage can be selected within the same instruction where it is used.
Signetics (1 pg.)

11 **"Interfacing the 8700 A/D Converter with the 8080 μP System"**
(8700, 8701, 8702)
Presents use of the 8700 A/D converter with the 8080 microprocessor. Provides techniques for interfacing the two and methods for handling multiple converts with increased throughput.
Teledyne Semiconductor AN-8 (6 pg.)

12 **"Minimum System Design TMS 9900 16-Bit Microprocessor"**
(TMS9900)
Explains system design, system performance, and minimum system configuration.
Texas Instruments Application Report (CA-184A (7 pg.)

13 **"TMS 5501 I/O in TMS 8080A μP Systems"**
(TMS5501, TMS8080A)
Describes operation and use of this input/output controller.
Texas Instruments Application Report (CA-185A (18 pg.)

14 **"Software Design for Microprocessors"**
(SBP0400, TMS1000, TMS5501, TMS8080, TMS9900)
Presents basic microprocessor fundamentals. Includes such topics as basic terms, basic machine architecture, instruction sets, and programming. Sample design problems are examined.
Texas Instruments $12.50 (385 pg.)

©IC MASTER 1978

MILITARY PARTS DIRECTORY

This section is divided into three parts: a table of those manufacturers willing to perform MIL-STD-883 screening, a two way military to commercial cross reference index, and the Qualified Parts List broken down into functions. It not only shows what devices are on the list and which manufacturers supply them, but also it decodes the military numbers into familiar terms.

how to use the military parts directory

The next page contains a table showing the manufacturers who have advised that they want to screen devices to MIL-STD-883 and/or perform other environmental screening. The table also indicates which companies are currently qualified to supply one or more devices on the QPL list. Such achievement is apt to indicate that these companies are well equipped to perform 883 testing. The following two pages provides convenient cross references between M38510 numbers and their commercial equivalents; plus indication of what devices are listed in the latest QPL.

The heart of this section is the functional QPL parts list. It is based on the latest Defense Electronics Supply Center Qualified Products List (QPL-38510-XX) at the time of publication. The revision and date of this list are indicated at the bottom of each page. Like the Master Selection Guide, the devices are classified my major functions; within each function the devices are arranged in alphanumeric order, which automatically groups CMOS together, 5400 Series together, etc.

A complete military part number includes a three letter suffix signifying the device class and packaging. The definitions of these letters are given in the Part Number Guide under "JAN Nomenclature." All the devices listed here meet class B and C requirements, a few devices (CMOS) meet class A specifications. The package styles and lead finishes that each manufacturer is qualified to supply can be determined by consulting the official QPL or by contacting the individual manufacturers. Once you have found the names of the companies you need to contact, you can reach them by using the information in the Manufacturers and Distributors Directory.

EXPLANATION:

The "MIL-M-38510" section indicates the IC manufacturers currently providing Q.P.L. ICs. More detailed information on the specific devices is given in the Qualified Products lists which follow.

The "MIL-STD-883 Screening" section lists those manufacturers who are both set up and actively want to screen devices to the levels indicated. "Other Screening" shows those who report that they want business calling for special military and industrial environment screening procedures.

ARITHMETIC FUNCTION

Device	M38510/	Description	Source
5482	00601	2-Bit Binary Full Adder	ITT Motorola
5483	00602	4-Bit Binary Full Adder (Look-Ahead Carry)	ITT Motorola Signetics TI
5485	15001	4-Bit Magnitude Comparator	Motorola Signetics
54181	01101	Arithmetic Logic/ Function Generator	Signetics
54182	01102	Look-Ahead Carry Generator	Motorola Signetics
54LS83	31201	4-Bit Binary Full Adder	Raytheon
54LS85	31101	4-Bit Magnitude Comparator	Signetics TI
54LS181	30801	ALU/Function Generator	Signetics
54LS283	31202	4-Bit Binary Full Adder	Raytheon
54S85	08201	4-Bit Magnitude Comparator	Signetics
54S181	07801	ALU/Function Generator	Signetics
9304	00603	Dual Full Adder	Motorola
9324	15002	4-Bit Magnitude Comparator	Motorola

BUFFERS, INVERTERS

4007	05301	Dual Complementary Pair plus Inverter	National RCA
4009	05501	Hex Buffer/Converter, Inverting	National RCA
4010	05502	Hex Buffer/Converter, Non-Inverting	National RCA
4041	05505	Quad True/ Complement Buffer	RCA
4049	05503	Hex Buffer/Converter, Inverting	National RCA
4050	05504	Hex Buffer/Converter, Non-Inverting	National RCA
5404	00105	Hex Inverter	Fairchild ITT Motorola National Signetics TI
5405	00108	Hex Inverter, O/C	Fairchild ITT Motorola National Signetics TI
5437	00302	Quad 2-Input NAND Buffer	ITT Motorola National Signetics TI
5438	00303	Quad 2-Input NAND Buffer, O/C	Fairchild Motorola National Signetics TI
5440	00301	Dual 4-Input NAND Buffer	Fairchild ITT Motorola National Signetics TI
54125/6	15301/2	Quad Gated Buffer, 3 State	Signetics
54H04	02305	Hex Inverter	Fairchild ITT Motorola Signetics TI
54H40	02401	Dual 4-Input NAND Buffer	Motorola Signetics TI
54LS04	30003	Hex Inverter	Fairchild Motorola National Signetics
54LS05	30004	Hex Inverter, O/C	National Signetics
54LS28	30204	Quad 2-Input NOR Buffer	Signetics
54LS37	30202	Quad 2-Input NAND Buffer	National Signetics
54LS40	30201	Dual 4-Input NAND Buffer	National Signetics
54L04	02005	Hex Inverter	National
54S04	07003	Hex Inverter	Signetics
54S05	07004	Hex Inverter, O/C	Signetics
54S40	07201	Dual 4-Input NAND Buffer	Signetics
935	03002	Hex Inverter	ITT
936	03003	Hex Inverter	ITT

COUNTERS

Device	M38510/	Description	Source
4017	05601	Decade Counter/Divider, Decoded Output	RCA
4018	05602	Presettable Divide-by-N Counter	RCA
4020	05603	14-Bit Binary Counter	RCA
4022	05604	Divide-by-8 Counter/ Divider, Decoded Output	RCA
4024	05605	7-Bit Binary Counter	RCA
5490	01307	Decade Counter, Ripple	ITT Motorola
5492	01301	Divide-by-12 Counter (÷2, ÷6)	ITT Motorola Signetics
5493	01302	4-Bit Binary Counter	ITT Motorola Signetics
54160	01303	Synchronous Decade Counter	Motorola National Signetics
54161	01306	Synchronous 4-Bit Binary Counter	ITT Motorola National Signetics
54162	01305	Fully Synchronous Decade Counter	Motorola National Signetics
54163	01304	Fully Synchronous 4-Bit Binary Counter	Motorola National Signetics
54192	01308	Decade Up/Down Counter	Motorola
54193	01309	Binary Up/Down Counter	Motorola

DECODERS

5442	01001	BCD-to-Decimal Decoder	ITT Motorola Signetics
5443	01002	Excess 3-to-Decimal Decoder	Motorola Signetics
5444	01003	Excess 3-Gray-to-Decimal Decoder	Motorola Signetics
5445	01004	BCD-to-Decimal Decoder, O/C	Motorola
5448	01008	BCD-to-Seven Segment Decoder/Driver with 30V Output	Motorola
5449	01009	BCD-to-7 Segment Decoder, O/C	Motorola
54145	01005	BCD-to-7 Segment Decoder	Motorola
54148	15602	8-Bit Priority Encoder	Signetics
54154	15201	4-Line to 16-Line Decoder/Demultiplexer	Signetics
54155	15202	Dual 2-Line to 4-Line Decoder/Demultiplexer	Motorola
54156	15203	Dual 2-Line to 4-Line Decoder/Demultiplexer	Motorola
54LS138	30701	3-to-8-Line Decoder/ Demultiplexer	Fairchild Motorola Raytheon
54LS139	30702	Dual 2-Line to 4-Line Decoder/Demultiplexer	Fairchild Motorola Raytheon
54LS42	30703	BCD to Decimal Decoder	Motorola
8250	15204	Binary-to-Octal Decoder	Signetics
8251	15205	BCD-to-Decimal Decoder	Signetics
8252	15206	BCD-to-Decimal Decoder	Signetics

DRIVERS

5406	00801	Hex Inverter Buffer/ Driver, O/C High Voltage Output	Fairchild Motorola National TI
5407	00803	Hex Buffer/Driver, O/C High Voltage Output	Fairchild Motorola National TI
5416	00802	Hex Inverter Buffer/ Driver, O/C High Voltage Output	Fairchild Motorola National TI
5417	00804	Hex Buffer/Driver, O/C High Voltage Output	Fairchild Motorola National TI

FLIP-FLOPS

Device	M38510/	Description	Source
4013	05101	Dual "D" Flip-Flop with Set/Reset	National RCA
4027	05102	Dual J-K Master-Slave Flip-Flop	National RCA
5470	00206	Positive Edge-Triggered J-K Flip-Flop	Fairchild ITT Motorola Signetics TI
5472	00201	J-K Master Slave Flip-Flop (AND Inputs)	ITT Motorola National Signetics TI
5473	00202	Dual J-K Master Slave Flip-Flop	ITT Motorola National Signetics TI
5474	00205	Dual D-Type Edge-Triggered Flip-Flop	Fairchild ITT National Signetics TI
5476	00204	Dual J-K Master Slave Flip-Flop with Preset and Clear	ITT National Signetics TI
5479	00207	Dual D-Type Flip-Flop	Motorola
54107	00203	Dual J-K Master Slave Flip-Flop	Motorola National Signetics TI
54174	01701	Hex D-Type Flip-Flop	Motorola National Signetics
54175	01702	Quad D-Type Flip-Flop	Motorola National Signetics
54H72	02201	J-K Master-Slave Flip-Flip (AND Inputs)	Motorola Signetics
54H73	02202	Dual J-K Master-Slave Flip-Flop	Signetics Motorola
54H74	02203	Dual D-Type Edge-Triggered Flip-Flop	Signetics
54H76	02204	Dual J-K Flip-Flop	TI Signetics
54H101	02205	J-K Negative Edge-Triggered Flip-Flop (AND-OR Inputs)	Motorola Signetics
54H103	02206	Dual J-K Negative Edge Triggered Flip-Flop	Motorola Signetics
54LS73	30101	Dual J-K Master Slave Flip-Flop	TI
54LS74	30102	Dual D-Type Positive Edge-Triggered Flip-Flop with Preset and Clear	Motorola TI
54LS76	30110	Dual J-K Master Slave Flip-Flop with Preset and Clear	Signetics TI
54LS107	30108	Dual Master Slave Flip-Flop	TI
54LS109	30109	Dual J-K Positive Edge-Triggered Flip-Flop with Preset and Clear	Fairchild Motorola Signetics TI
54LS112	30103	Dual J-K Negative Edge-Triggered Flip-Flop with Preset and Clear	Fairchild Signetics TI
54LS113	30104	Dual J-K Negative Edge-Triggered Flip-Flop with Separate Preset and Clock	TI
54LS114	30105	Dual J-K Negative Edge-Triggered Flip-Flop with Clock, Clear, and Preset	Fairchild TI
54LS174	30106	Hex D-Type Flip-Flop	AMD Motorola Raytheon Signetics TI
54LS175	30107	Quad D-Type Flip-Flop	AMD Fairchild Motorola Raytheon TI
54L71	02101	J-K Master-Slave Flip-Flop (AND-OR Inputs)	National
54L72	02102	J-K Master-Slave Flip-Flop (AND Inputs)	National
54L73	02103	Dual J-K Master-Slave Flip-Flop	National
54L74	02105	Dual D-Type Edge-Triggered Flip-Flop	National
54L78	02104	Dual J-K Master-Slave Flip-Flop	National
54S74	07101	Dual D Flip-Flop	Signetics

MULTIPLEXERS

Device	M38510/	Description	Source
54150	01401	16-Channel Data Selector/Multiplexer	Signetics
54151	01406	8-Input Multiplexer	Motorola Signetics
54153	01403	Dual 4-Channel Data Selector/Multiplexer	Motorola National Signetics
54LS151	30901	8-Input Multiplexer	Raytheon
54LS153	30902	Dual 4-Channel Data Selector/Multiplexer	Raytheon
54LS157	30903	Quad 2-Input Multiplexer, Non-Inverting	Raytheon
54LS158	30904	Quad 2-Input Multiplexer, Inverting	Raytheon
54S151	07901	8-Input Multiplexer	Signetics
54S153	07902	Dual 4-Channel Data Selector/Multiplexer	Signetics
54S157	07903	Quad 2-Input Multiplexer, Non-Inverting	Signetics
54S158	07904	Quad 2-Input Multiplexer, Inverting	Signetics
9309	01404	Dual 4-Input Multiplexer	AMD ITT Motorola Signetics
9312	01402	8-Channel Data Selector/ Multiplexer	AMD ITT Motorola
9322	01405	Quad 2-Input Data Selector/Multiplexer (Non-Inverting)	AMD ITT Motorola Signetics

MULTIVIBRATORS

54121	01201	Monostable Multivibrator	ITT Motorola Signetics
54122	01202	Retriggerable Monostable Multivibrator with Clear	Motorola
54123	01203	Dual Retriggerable Monostable Multivibrator with Clear	Motorola Signetics
9601	01204	One Shot Multivibrator	Motorola
9602	01205	Dual One Shot Multivibrator	Motorola

MISCELLANEOUS

5413	15101	Dual 4-Input NAND Schmitt Trigger	Motorola Signetics
5414	15102	Hex Schmitt Trigger, Inverting	Motorola Signetics
54132	15103	Quad 2-Input NAND Schmitt Trigger	Motorola Signetics
54180	01901	9-Bit Odd/Even Parity Generator/Checker	Motorola Signetics
54LS13	31301	Dual 4-Input NAND Schmitt Trigger	Signetics TI
54LS14	31302	Hex Schmitt Trigger, Inverting	Signetics TI
54LS132	31303	Quad 2-Input NAND Schmitt Trigger	Signetics TI

INTERFACE

ANALOG SWITCHES

DG300	—	Dual SPST	See Siliconix information on pages 160 through 167
DG301	—	SPDT	
DG302	—	Dual DPST	
DG303	—	Dual SPDT	
DG304	—	Dual SPST	
DG305	—	SPDT	
DG306	—	Dual DPST	

The above Analog Switches have been proposed for QPL Status. Detailed technical information is found on the pages indicated above. To determine their current status consult Siliconix.

LINE DRIVERS AND RECEIVERS

54S140	08101	Dual 4-Input Positive NAND Line Driver	Signetics
55107	10401	Differential Line Receiver	Fairchild TI
55108	10402	Differential Line Receiver	Fairchild TI
55113	10405	Dual Differential Line Driver, Three-State	
55114	10403	Dual Differential Line Driver	Fairchild
55115	10404	Dual Differential Line Receiver	Fairchild

BASED ON QPL-38510-31, 1 NOVEMBER 1977

SPECIFICATION REQUIREMENTS FOR MICROCIRCUITS, CMOS, ANALOG SWITCH WITH DRIVER, MONOLITHIC, SILICON

1. *SCOPE*

1.1 Scope. This specification covers the detail requirements for silicon, CMOS, monolithic, analog switches. Three product assurance classes and a choice of case outline and lead finish are provided for each type and are reflected in the complete part number.

1.2 Part Number. The part number shall be in accordance with MIL-M-38510.

1.2.1 Device Type. The device type shall be as shown in the following:

Device Type	Circuit
01	2x, SPST Switches, TTL Input Compatible
02	1x, SPDT Switch, TTL Input Compatible
03	2x, DPST Switches, TTL Input Compatible
04	2x, SPDT Switches, TTL Input Compatible
05	2x, SPST Switches, CMOS Input Compatible
06	1x, SPDT Switch, CMOS Input Compatible
07	2x, DPST Switches, CMOS Input Compatible
08	2x, SPDT Switches, CMOS Input Compatible

1.2.2 Device Class. The device class shall be the product assurance level as defined in MIL-M-38510.

1.2.3 Case Outline. The case outline shall be designated as follows:

Outline Letter	MIL-M-38510 Appendix C Case Outline
C	D-1 (14-Lead, 1/4" x 3/4", dual-in-line)
D	F-2 (14-Lead, 1/4" x 3/8", flat-pack)
I	A-2 (10-Lead, Can, TO-100)

1.2.4 Absolute Maximum Ratings

V_{IN} to Ground . . . . . V+ + 18, V+ – 36 Vdc
V+ to V– . . . . . +36 Vdc
V+ to Ground . . . . . +36 Vdc
V_S or V_D . . . . . V_1, V_2
Current (Any Terminal) . . . . . 30 mA
Pulsed 1 ms, 10% Duty Cycle (S or D Only) . . . 100 mA
Storage Temperature Range . . . . . –65°C to +150°C
Lead Temperature (Soldering, 60 Sec) . . . . . 300°C
Junction Temperature . . . . . T_J = 150°C

1.2.5 Recommended Operating Conditions

V+ . . . . . +15 Vdc
V– . . . . . –15 Vdc
GND . . . . . 0 Vdc
Ambient Temperature Range . . . . . –55°C to +125°C

1.2.6 Power and Thermal Characteristics

Package	Case Outline	Maximum Allowable Power Dissipation 1/	Thermal Resistance Junction to Case 2/
14 Lead DIP	C	275 mW	0.091°C/mW
14 Lead FP	D	250 mW	0.100°C/mW
10 Lead Can	I	150 mW	0.167°C/mW

NOTES:
1/ All leads welded or soldered to PC board.
2/ Applies only when $T_A \geq 75°C$.

2. *APPLICABLE DOCUMENTS*

2.1 The following document, of the issue in effect on date of invitation for bids or request for proposal, forms a part of this specification to the extent specified herein.

SPECIFICATION
Military
MIL-M-38510—Microcircuits, General Specification for.
STANDARD
Military
MIL-STD-883—Test Methods and Procedures for Microelectronics.

(Copies of specifications, standards, drawings, and publications required by suppliers in connection with specific procurement functions should be obtained from the procuring activity or as directed by the contracting officer.)

3. *REQUIREMENTS*

3.1 Detail Specifications. The individual item requirements shall be in accordance with MIL-M-38510, and as specified herein.

3.2 Design, Construction, and Physical Dimensions. The design, construction, and physical dimensions shall be as specified in MIL-M-38510 and 1.2.3 herein.

3.2.1 Circuit Diagram and Terminal Connections. The circuit diagram and terminal connections shall be as specified in Figure 1.

3.3 Lead Material and Finish. Lead material and finish shall be in accordance with MIL-M-38510.

3.4 Electrical Performance Characteristics. The following electrical performance characteristics apply over the full operating ambient temperature range of –55°C to +125°C and for supply voltages as indicated in 1.2.5, unless otherwise specified.

©IC MASTER

3.4.1 Switch Operation. The analog switches listed below are guaranteed to turn "on" wither a "low" input ($V_{INL} \leq$ 0.8 V for the 01-04 devices and $V_{INL} \leq$ 3.5 V for the 05-08 devices) or "high" input ($V_{INH} \geq$ 4 V for the 01-04 devices and $V_{INH} \geq$ 11 V for the 05-08 devices) as specified in Table A.

3.5 Electrical Test Requirements. Electrical test requirements shall be as specified in Table III for the applicable device type and device class. The subgroups of Table III and the limits of Table IV which constitute the minimum electrical test requirements for screening, qualification and quality conformance, by device class are specified in Table II.

Table A. Switch Function (Truth Table)

Device Types	V_{IN}	Channels ON	Channels OFF	Device Types	V_{IN}	Channels ON	Channels OFF
01 and 05	V_{INL}		1, 2	03 and 07	V_{INL}		1, 2, 3, 4
	V_{INH}	1, 2			V_{INH}	1, 2, 3, 4	
02 and 06	V_{INL}	2	1	04 and 08	V_{INL}	3, 4	1, 2
	V_{INH}	1	2		V_{INH}	1, 2	3, 4

Table I. Electrical Performance Characteristics

Characteristic		Conditions Same as 1.2.5, Unless Otherwise Specified	T_A/°C	Limits 01, 02, 03, 04 Min	Limits 01, 02, 03, 04 Max	Limits 05, 06, 07, 08 Min	Limits 05, 06, 07, 08 Max	Units
R_{DS}	Drain-Source ON Resistance	V_{IN} = (See Table A) V_D = −10 V, I_S = +10 mA	−55, 25		50		50	Ω
			125		75		75	
		V_{IN} = (See Table A) V_D = +10 V, I_S = −10 mA	−55, 25		50		50	
			125		75		75	
$I_{D(on)}$	Channel ON Leakage Current	$V_D = V_S$ = +15 V	−55, 25		1		1	nA
			125		100		100	
		$V_D = V_S$ = −15 V	−55, 25		−2		−2

TABLE II. Electrical Test Requirements

MIL-STD-883 Test Requirement	Class A Devices	Class B Devices	Class C Devices
Interim Electrical Parameters (Pre Burn-In) (Method 5004)	1	1	None
Final Electrical Test Parameters (Method 5004)	1*, 2, 3, 9	1*, 2, 3, 9	1
Group A Test Requirements (Method 5005)	1, 2, 3, 7, 8, 9	1, 2, 3, 7, 8, 9	1, 2, 3, 7, 8, 9
Groups B, C and D Endpoint Electrical Parameters (Method 5005)	1, 2, 3 and Table V Delta Limits	Table V Delta Limits and Limits	Table V Delta Limits and Limits

*PDA applies to subgroup 1 (Sec. 4.3(b)).

3.6 Marking. Marking shall be in accordance with MIL-M-38510 and 1.2. At the option of the manufacturer, the following marking may be omitted from the body of the microcircuit, but shall be retained on the initial container.

(a) Country of origin.

3.7 Microcircuit Group Assignment. The devices covered by this specification shall be in technology group C.

4. *PRODUCT ASSURANCE PROVISIONS*

4.1 Sampling and Inspection. Sampling and inspection procedures shall be in accordance with MIL-M-38510 and methods 5005 and 5007 of MIL-STD-883, except as modified herein.

Table III. Group A Inspection for Device Types 01 to 08

Subgroup	Symbol	MIL-STD-883 Method	Test	Conditions (V_1 = +15 V, V_2 = −15 V, GND = 0, Unless Otherwise Specified)	Limits Min	Limits Max	Units

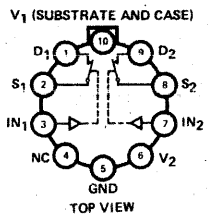
	$IF_{S(off)}$		5	V_{IN} = 1/, V_D = −15 V, V_S = +15 V, 5/		0.1	µA
	$IF_{S(off)}$		6	V_{IN} = 1/, V_D = +15 V, V_S = −15 V, 5/		−0.1	µA
9 T_A = +25°C	$t_{(on)}$	3003	1	t_r < 20 nsec, t_f < 20 nsec, See Figure 3, 5/		2/	nsec
	$t_{(off)}$	3003	2	t_r < 20 nsec, t_f < 20 nsec, See Figure 3, 5/		2/	nsec

Notes: 1/ Test conditions are from Table I.
2/ Test limits are from Table I.
3/ Each input is tested individually.
4/ This test is not performed on the 05-08 products.
5/ Each output is measured individually.

Table IV. Groups B, C and D Endpoint Electrical Parameters (Conditions from Group A, Subgroup 1 Testing)



Test	All Products Limit	All Products Delta 1/
R_{DS}	50 Ω	3 Ω or 10%
$I_{D(off)}$	1 nA	0.5 nA
$I_{S(off)}$	1 nA	0.5 nA

Notes: 1/ When two delta limits are specified, only the larger of the two limits shall apply.

Figure 11

4.2 Qualification Inspection. Qualification inspection shall be in accordance with MIL-M-38510. Inspections to be performed shall be those specified herein for groups A, B, C and D (see 4.4.1, 4.4.2 and 4.4.3). After qualification of one or more electrically and structurally similar types with a single lead finish, other lead finishes of the same case outline may be qualified by submitting a single type in the qualified case outline to the group B, subgroup 3 test and to the group D, subgroups 3 and 5 tests. Other case outlines with identical electrical characteristics and lead finishes may be qualified by submitting each case outline to all group D tests.

4.3 Screening. Screening shall be in accordance with Method 5004 of MIL-STD-883 and shall be conducted on all devices prior to qualification and quality conformance inspection. The following additional criteria shall apply:

(a) Final electrical test [(3.1.14(b)) of Method 5004 of MIL-STD-883].
1. Subgroup 4 Testing is not applicable.

(b) Percent defective allowable (PDA) – The PDA is specified as 5 percent for class A devices and 10 percent for class B devices based on failures from group A, subgroup 1 test after cooldown as final electrical test in accordance with Method 5004 of MIL-STD-883, and with no intervening electrical measurements. If interim electrical parameter tests are performed prior to burn-in, failures resulting from pre burn-in screening may be excluded from the PDA. If interim electrical parameter tests prior to burn-in are omitted, then all screening failures shall be included in the PDA. The verified failures of group A, subgroup 1 after burn-in in that lot shall be used to determine the percent defective for that lot, and the lot shall be accepted or rejected based on the PDA for the applicable device class.

4.4 Quality Conformance Inspection. Quality conformance inspection shall be in accordance with MIL-M-38510.

4.4.1 Group A Inspection. Group A inspection shall consist of the test subgroups and LTPD values shown in Table I of Method 5005 of MIL-STD-883 and as follows:

(a) Subgroups 4, 5, 6, 10 and 11 are not applicable.

(b) Tests shall be as specified in Table III herein.

4.4.2 Group B Inspection. Group B inspection shall consist of the test subgroups and LTPD values shown in Table II of Method 5005 of MIL-STD-883 and as follows:

(a) End point electrical parameters shall be as specified in Table III herein.

(b) Steady state life requirement for group B, subgroup 5 testing of class A devices will be satisfied by testing to LTPD 5, $T_A = 125^{\circ}C$ and t = 1000 hours.

4.4.2.1. Subgroup 4 or 7. Subgroup 4 (for class B devices) or 7 (for class A devices) shall be added to the group B requirements, and shall consist of the test, conditions, and limits specified in 4.5.3. The LTPD shall be 15 for both subgroups.

4.4.3 Group C and D Inspection. Group C and D inspection shall consist of the test subgroups and LTPD values shown in Table III of Method 5005 of MIL-STD-883 and as follows:

(a) End point electrical parameters shall be as specified in Table III herein.

(b) Lead bend in only one direction is required for initial conditioning prior to moisture resistance and salt atmosphere tests.

4.5 Methods of Examination and Test. Methods of examination and test shall be as specified in the appropriate tables. Electrical test circuits as prescribed herein or in the referenced test methods of MIL-STD-883 shall be acceptable. Other test circuits shall require the approval of the qualifying activity.

4.5.1 Voltage and Current. All voltage values given are referenced to the external zero reference level of the supply voltage. Currents given are conventional current and positive when flowing into the referenced terminal.

4.5.2 Life Test Cooldown Procedure. When devices are measured at 25°C following application of the operating life or burn-in test condition, they shall be cooled to room temperature prior to removal of the bias, except that bias may be removed for up to one minute for the purpose of removing the devices from the oven.

4.5.3 High Voltage (V_{ZAP}) Test of Protection Circuits. Unless otherwise specified, one input and output terminal of the device under test (DUT) shall be subjected to a voltage pulse from a 100 pF source charged to 400 V (see Figure 10). The test shall be conducted in the following sequence:

(a) Measure I_{INL}, I_{INH} and $I_{D(off)}$ at one input and output terminal of the DUT at 25°C. Also measure I_1 and I_2 at 25°C. These measurements shall be made in accordance with Table III herein.

(b) With S_1 in position 1 charge C_1 to 400 V with S_1 in position 2. Apply the test voltage (V_{ZAP}) to the same terminal selected for leakage current measurements. Apply V_{ZAP} in a 4 pulse sequence as follows:

(1) Input (–) to V_1
(2) Input (+) to GND
(3) Drain (+) to V_2
(4) Drain (–) to V_1

(c) Within 24 hours repeat the I_1 and I_2 measurements and the I_{INL}, I_{INH} and $I_{D(off)}$ measurements on the same terminals as performed above. At this time a DUT exhibiting leakage currents in excess of the specified limits is defective.

4.6 Inspection of Preparation for Delivery. Inspection of preparation for delivery shall be in accordance with MIL-M-38510, except that the rough handling test shall not apply.

5. *PREPARATION FOR DELIVERY*

5.1 Preservation-Packaging and Packing. Microcircuits shall be prepared for delivery in accordance with MIL-M-38510.

6. *NOTES*

6.1 Notes. The notes specified in MIL-M-38510 are applicable to this specification.

6.2 Intended Use. Microcircuits conforming to this specification are intended for use for Government microcircuit applications (original equipment) and logistic purposes.

6.3 Ordering Data. The contract or order should specify the following:

(a) Complete part number (see 1.2).

(b) Requirements for delivery of one copy of the quality conformance inspection data pertinent to the device inspection lot to be supplied with each shipment by the device manufacturer, if applicable.

(c) Requirement for certificate of compliance, if applicable.

(d) Requirements for notification of change of product or process to procuring activity in addition to notification to the qualifying activity, if applicable.

(e) Requirements for packaging and packing.

(f) Requirements for failure analysis (including required test condition of Method 5003), corrective action and reporting of results, if applicable.

(g) Requirements for product assurance options.

(h) Requirements for carriers, special lead lengths or lead forming, if applicable. These requirements shall not affect the part number. Unless otherwise specified, these requirements will not apply to direct purchase by or direct shipment to the Government.

6.4 Abbreviations, symbols and definitions used herein are defined in MIL-STD-1313 and MIL-STD-1331 and as follows:

6.4.1 R_{DS}. The series ON resistance of each switch. $R_{DS} = |(V_D - V_S)/I_S|$.

6.4.2 $I_{D(off)}$, $IF_{D(off)}$. The leakage current into the drain terminal while the switch is off.

6.4.3 $I_{S(off)}$, $IF_{S(off)}$. The leakage current into the source terminals while the switch is off.

6.4.4 $I_{D(on)}$. The leakage current from the switch to the driver circuitry while the switch is on.

6.5 Logistic Support. Lead materials and finishes (see 3.3) are interchangeable. Unless otherwise specified, microcircuits procured for Government logistic support will be procured to device class B (see 1.2.2), lead material and finish C (see 3.3). Longer length leads and lead forming shall not affect the part number.

6.6 Substitutability. Microcircuits covered by this specification are substitutable for the following commerical device types:

Device Type	Commercial Type	Device Type	Commercial Type
–01	DG300A	–05	DG304A
–02	DG301A	–06	DG305A
–03	DG302A	–07	DG306A
–04	DG303A	–08	DG307A

MASTER SELECTION GUIDE

The Master Selection Guide is the most comprehensive directory of integrated circuitry available in the United States. It organizes them into categories — digital, interface, linear, memory and microprocessor. Within these categories it classifies the devices by type (i.e., CMOS, ECL, TTC, etc.) and by function (counters, gates, flip-flops, etc.). Furthermore, the guide includes detailed data provided by the manufacturers for those products which they have chosen as particularly important.

how to use the master selection guide

This guide provides sufficient information to make initial product selections, to lead you to a group of device numbers and manufacturers' names. It enables you to find the products which are most apt to fulfill your major requirements and then provides data to help you make your final choice. All devices that appear in this selection, both in the initial selection guide and in the data pages, are included in the Part Number and Product Indexes. These index listings lead to the page and the line on that page where each device appears. Users of the 1977 IC Master will find several new features in the 1978 selection guide. These include an alphabetized topic index which starts on the next page. The coverage of industrial and consumer circuits has been greatly expanded; the guide now identifies these products by model number and covers digital, linear and digital-linear combinations under one heading, Linear & Consumer Circuits. The TTL major families, TTL, TTL-LS, TTL-H and TTL-S have been combined under one heading to facilitate function comparisons. And the Microprocessor section has been enlarged, grouping microprocessor system components together by processor type and adding many new system descriptions.

INTRODUCTION TO DIGITAL

The Master Selection Guide provides sufficient information to make initial product selections, to lead you to a group of device numbers and manufacturers' names. It enables you to find the products which are most appropriate to fulfill your major requirements and then provides data for many of the more important products.

All devices that appear in this section, both in the initial selection guide and in the data pages, are included in the Part Number and Product Indexes. These index listings lead to the page and the line on that page where each device appears.

The first two pages of the digital section present comparisons of the performance of the major digital families to help you choose between families. These are followed by lists of the devices in each family arranged into functional groups (arithmetic, buffers/inverters, etc.). Within each group you can readily determine all of the various circuits available, surveying the entire IC industry so that you know all your options. The initial selection lists are followed by the device data pages which have been provided for you by the manufacturers. When such data is in the book, the page numbers are given with the initial selection listings.

Some digital circuits — calculator, watch chips, and electronic organ circuits — are not included in this section, but they are covered in detail in the Linear-Consumer section. Digital circuits which do not fall into one of the major logic families are listed at the end of the selection information under the heading Digital-Other Devices.

This section is not complicated by reference to package styles; the package style suffixes are usually deleted. For more information on each companies' suffixes, see the Part Number Guide. Throughout the Master Selection Guide, each full military temperature range (−55°C to 125°C) device is indicated by a dagger (†) before the manufacturer's name. Manufacturers' names are normally spelled out; however, a few are abbreviated and the abbreviations are explained on page 176.

WHICH DIGITAL FAMILY?

Edited from material published in Fairchild Progress magazine, Peter Alfke, author.

With several digital families available, the logical question is — which are the best ICs for my particular application?

To answer the question, you need to evaluate the pros and cons of the various logic families. These tradeoffs are listed in Tables I-IV. You will need to establish your speed requirements. Since speeds are characterized by the clock rate of registers and counters, this discussion is divided into four groups based on clock rates.

Very High Speed	Clock Rate	> 100 MHz	ECL
High Speed	Clock Rate	30 to 100 MHz	ECL, S-TTL
Medium Speed	Clock Rate	5 to 50 MHz	LS-TTL, TTL
Low Speed	Clock Rate	< 5 MHz	LS-TTL, CMOS

VERY HIGH SPEED SYSTEMS — Clock Rate > 100 MHz

There is only one reasonable IC logic family for use in very high speed systems — Emitter Coupled Logic, ECL. Originally, this technology presented considerable electrical problems such as voltage and temperature sensitivity and fast edge rates that caused reflection and cross-talk problems. In recent years, however, ECL development has become more user-oriented and there is better compatibility between circuit characteristics and interconnection techniques.

The modern popular ECL line is the 10,000 Series, manufactured in uncompensated, in voltage-compensated, or in both voltage and temperature-compensated forms. The latter form of compensation assures that significant parameters such as logic levels, noise margins and speed remain constant over a wide range of temperature and power supply voltage. These 10K and 95K logic circuits have deliberately slowed-down edge rates to make them easier to use and they can also drive terminated transmission lines whenever required by the interconnection length.

HIGH SPEED SYSTEMS — Clock Rate 30 to 100 MHz (Table II)

Here, you have a choice between ECL and Schottky TTL. H-TTL is really obsolete since it consumes more power than Schottky TTL, has similar interconnection problems and offers only half the speed. Also, it is not significantly faster than the best Low Power Schottky TTL. So, this narrows down your choice to ECL and Schottky TTL.

MEDIUM SPEED SYSTEMS — Clock Rate 5 to 50 MHz (Table III)

Standard TTL has been the obvious choice for medium speed systems for many years. Many designs will increasingly use Low Power Schottky TTL as it becomes more available, multiple sourced, and as the price premium decreases. You can mix standard and LS-TTL to solve most fan-out problems.

SLOW SPEED SYSTEMS — Clock Rate < 5 MHz (Table IV)

If you design slow speed systems you are faced with the largest number of attractive alternatives. Traditionally, TTL and DTL has been used. Now you can save power, cost and avoid heat and reliability problems by changing to LS-TTL, without affecting the logic design and perhaps not even changing the PC board layout.

If the system speed permits, you can switch to CMOS and save even more power and simplify the power supply, but now you must cope with a family of different logic elements and a hodgepodge of MSI elements, far less systems oriented than the better TTL circuits. Also you will notice wide parameter differences between the "same" products from different vendors.

The greatest challenge, however, is to examine the traditional hard-wired system design and decide whether or not it can be implemented with a microprocessor. If the requirements are both complicated and slow enough, this approach might save manufacturing cost, design time, and service time, as well as improve reliability, provide additional flexibility, and perhaps allow additional features at no extra cost.

MOS (p-channel, n-channel, either metal or silicon gate, also silicon on sapphire) does not compete directly with LS-TTL and CMOS. The MOS logic elements (gates and flip-flops) are very small but the input and output buffers are so large and relatively slow that MOS cannot be cost/performance competitive at MSI complexity (below 200 gates). MOS is therefore meaningful only in LSI circuits, where it has proven to be not only competitive, but dominating. These areas are:

- LSI memories, RAMs, ROMs, and shift registers of 500 to 4096 bits at clock rates below 5 MHz.
- Specialized, inherently slow LSI functions produced in very large volume (calculators, clocks, some instrument circuits like DVMs).
- Custom LSI circuits where the manufacturing volume is high enough or the weight/space saving valuable enough to absorb the development cost.
- Microprocessors, where a very carefully designed, standard circuit performs specialized tasks through ROM-stored programming.

SUMMARY

The proliferation of digital circuits and technologies gives you a new degree of freedom, but it also challenges your judgement and imagination. You are faced with an almost overwhelming number of competing technologies, each with its strong and weak points. The basic component speed requirement and the available power will quickly narrow your choice down to two or three different logic families; the tables presented here will make your final decision easier.

You should not forget, however, that the component speed requirement is also affected by your choice of architecture. A parallel approach requires more, but slower components, while a serial architecture requires fewer but faster components. The vesatility of modern MSI circuits makes it easy to explore these alternatives. It is very important to choose the IC logic family at an early stage in the system design, since the full cost, speed and reliability advantages can only be gained by designing in accordance with the device features, taking advantage of their logic and organization.

TABLE I: COMPARISON OF ELECTRICAL CHARACTERISTICS

	CMOS 5 V SUPPLY	CMOS 10 V SUPPLY	STANDARD TTL	74LS LOW POWER SCHOTTKY	9LS LOW POWER SCHOTTKY	SCHOTTKY TTL	10K ECL
PROPAGATION DELAY	35 ns	25 ns	10 ns	10 ns	5 ns	3 ns	2 ns
FLIP-FLOP TOGGLE FREQUENCY	5 MHz	10 MHz	35 MHz	40 MHz	80 MHz	100 MHz	200 MHz
QUIESCENT POWER[1]	10 nW	10 nW	10 mW	2 mW	2 mW	25 mW	25 mW
NOISE IMMUNITY	2 V	4 V	1 V	0.8 V	0.8 V	0.9 V	0.2 V
FAN OUT (within family)	>50[2]	>50[2]	10	20	20	10	>50

[1]Note the change from nanowatts to milliwatts.
[2]Or as determined by allowable propagation delay.

TABLE II. COMPARISON OF DIGITAL LOGIC FAMILY CHARACTERISTICS FOR HIGH SPEED SYSTEMS (CLOCK RATE 30 TO 100 MHz)

10K AND 95K SERIES ECL	SCHOTTKY TTL
Advantages	**Disadvantages**
Short delays allow propagation through more logic levels in a clock cycle. Compatibility with even faster families currently in development makes future system upgrading easy.	Component delays are about twice as long as with ECL and will not be improved in the foreseeable future.
Low output impedance drives all types of interconnections including terminated transmission lines.	Outputs are not capable of driving terminated transmission lines without causing severe fan-out compromises.
High output drive capability and complementary outputs accommodate differential transmission over tested pairs.	
Slow edge rate minimizes reflection problems.	Has the fastest output transitions of any logic family, causing reflection problems even with relatively short interconnection lengths, and causing cross-talk problems.
Complementary outputs on many elements add design flexibility.	
Wired-OR capability simplifies logic design.	
Compensated circuits simplify power supply and temperature regulation.	Generates fast power supply load changes, requires good decoupling.
High input impedance minimizes loading, allows high fan-out.	Input thresholds and output low levels are slightly offset from conventional TTL, causing some loss of noise immunity.
Disadvantages	**Advantages**
Unfamiliar type of circuitry, logic, nomenclature, and pinouts.	Compatible with popular TTL, same supply voltage, almost identical signal levels, same SSI and MSI logic, nomenclature, pinouts. Ideal to speed up critical paths in standard TTL systems.
Not level-compatible with TTL and CMOS, requires additional interface elements.	
Requires external pull-down resistors on all used outputs.	Outputs require no pull-up (or down) resistors.
Has less absolute noise margin.	Large signal swing and large absolute noise immunity cause less problems with temperature or supply voltage variations and gradients, resistive drops along supply lines, and outside noise.
Higher ground current requires heavier distribution busses.	
Has one less logic pin per package due to double ground.	
Has higher power consumption at low frequencies than equivalent S-TTL circuits.	Has lower system power consumption at moderate speed.

TABLE III. COMPARISON OF DIGITAL LOGIC FAMILY CHARACTERISTICS FOR MEDIUM SPEED SYSTEMS (CLOCK RATE 5 TO 50 MHz)

STANDARD TTL	LOW POWER SCHOTTKY TTL
Advantages	**Disadvantages**
Large number of SSI and MSI functions.	Somewhat fewer devices but this is changing.
Low prices.	Presently higher priced than standard TTL.
Specifications standardized.	Electrical characteristics differ between suppliers.
Disadvantages	**Advantages**
High power consumption (10 mW per gate, 200 to 500 mW per MSI package.)	Saves 75% of the power of equivalent standard TTL.
Large, heavy, expensive, hot power supply and regulator.	Smaller, lighter, cheaper, cooler power supply and regulator.
Heat density problems when using predominantly MSI.	No heat density problem. Cooler, therefore more reliable.
	May eliminate the need for fans and filters.
Not fully compatible with most CMOS and MOS.	Compatible with CMOS and MOS.
	Generates less noise than standard TTL.

TABLE IV. COMPARISON OF DIGITAL LOGIC FAMILY CHARACTERISTICS FOR LOW SPEED SYSTEMS (CLOCK RATE 5 MHz)

STANDARD OR LOW POWER SCHOTTKY TTL	CMOS
Advantages	**Disadvantages**
Well designed, system-oriented MSI.	Some of the original CMOS circuits are poorly defined and not systems oriented.
Adequate speed, tight tolerances.	Low speed, delays depend on supply voltage and capacitive loading.
Low impedance outputs give good immunity against capacitively coupled noise.	Poor current noise immunity (capacitively coupled noise.)
Familiar functions, logic, pinouts.	New functions, logic pinouts.
Standard TTL available from many suppliers, low cost.	Large parameter variations between different vendors.
Disadvantages	**Advantages**
Relatively high static consumption and heat generation.	Extremely low static power consumption, very little heat generated at moderate speed.
Tight power supply voltage requirements (5 V $\pm$5% commercial, $\pm$10% military grade).	Very wide range of supply voltages (theoretically 3 . . . 20 V, practically 5 . . . 12 V).
Not well-suited for portable battery operation.	Ideally suited for battery operation.
More expensive power supply.	Low cost power supply. Less cost, weight, heat, size than for any other family.
Lower voltage noise immunity.	High voltage noise immunity, an advantage with inductively coupled noise.
LS-TTL available from only a few suppliers.	Available from many suppliers.

Arithmetic Functions

6 bit Adder

Device	Source
F10080	Fairchild

4 bit Binary/Decade Arithmetic Logic Unit

Device	Source
F100181	Fairchild

Look Ahead Carry Circuit

Device	Source
F100179	Fairchild

9 bit Comparator

Device	Source
F100166	Fairchild

Counters

Multipurpose Counting Register

Device	Source
F100136	Fairchild

Decoders

Universal Decoder

Device	Source
F100170	Fairchild

Drivers

Quad Driver

Device	Source
F100112	Fairchild

Hex Bus Driver

Device	Source
F100123	Fairchild

Flip-Flops

Triple D Type

Device	Source
F100131	Fairchild

Hex D Type

Device	Source
F100151	Fairchild

Gates, AND-OR-Invert

Triple AND OR Invert Gate

Device	Source
F100117	Fairchild

5 Wide AND OR Invert Gate

Device	Source
F100118	Fairchild

Gates, Exclusive OR/NOR

Quintuple Exclusive OR/NOR Gate

Device	Source
F100107	Fairchild

Gates, OR/NOR

Triple 5 Input OR/NOR Gate

Device	Source
F100101	Fairchild

Quintuple 2 Input OR/NOR Gate

Device	Source
F100102	Fairchild

Latches

Triple D Latch

Device	Source
F100130	Fairchild

Hex D Latch

Device	Source
F100150	Fairchild

Memories

CAM (4x4)

Device	Source
100142	Fairchild

RAM (16x4 Register File)

Device	Source
F100145	Fairchild

RAM (1024x1)

Device	Source	
F100415	**Fairchild**	**(1128)**

Multiplexers

Dual 8 Input Multiplexer

Device	Source
F100163	Fairchild

16 Input Multiplexer

Device	Source
F100164	Fairchild

Triple 4 Input Multiplexer

Device	Source
F100171	Fairchild

DIGITAL–HNIL/HTL (Cont'd)

Gates, Exclusive OR

Quad 2 Input Exclusive OR Gate
- MC683 — Motorola

Gates, Miscellaneous

Hex Inverter/Gate (Quad Inverter, Dual NAND Gate)
- 333A/C — Teledyne S
- 333B/M — † Teledyne S

Hex Inverter/Gate (Quad Inverter, Dual NAND Gate) Open Collector
- 332A/C — Teledyne S
- 332B/M — † Teledyne S

Dual 4 Input Gate Expander (for 600 Series)
- MC669 — Motorola

Dual 5 Input Gate Expander (for 300 Series)
- 331A/C — Teledyne S
- 331B/M — † Teledyne S
- CA3094 — † RCA
- CA3094A — † RCA
- CA3094B — † RCA

Latches

Quad Latch
- MC682 — Motorola

Multiplexers

8 Bit Multiplexer
- 350A/C — Teledyne S
- 350B/M — † Teledyne S

Dual 4 Bit Multiplexer
- 351A/C — Teledyne S
- 351B/M — † Teledyne S

Multivibrators

Monostable Multivibrator
- H117 — SGS
- 346 — Teledyne S

Dual Monostable Multivibrator
- MC667 — Motorola
- 342A/C — Teledyne S
- 342B/M — † Teledyne S

Dual Retriggerable Monostable Multivibrator
- 347A/C — Teledyne S
- 347B/M — † Teledyne S

Shift Registers

4 bit Parallel In Parallel Out Shift Register
- MC686 — Motorola
- 375A/C — Teledyne S
- 375B/M — † Teledyne S

Translators

Dual Low to High Interface (TTL to HNIL)
- 362A/C — Teledyne S
- 362B/M — † Teledyne S

Triple Low to High Translator (TTL to HTL)
- MC666 — Motorola

Quad Low to High Interface (TTL to HNIL)
- H114 — SGS
- 363A/C — Teledyne S
- 363B/M — † Teledyne S

Translators (Cont'd)

Dual High to Low Interface (HNIL to DTL, TTL)
- 361A/C — Teledyne S
- 361B/M — † Teledyne S

Dual Interface Element, (Line Driver, Receiver, ECL to TTL, MOS to TTL, Schmitt Trigger)
- MC696 — Motorola

Triple High to Low Translator (HTL to TTL)
- MC665 — Motorola

Quad High to Low Converter (Open Collector)
- H113 — SGS

Hex Inverter/Interface (Low to High: TTL, CMOS to HTL, CMOS)
- MC691 — Motorola

Miscellaneous

Pulse Stretcher
- 348 — Teledyne S

Dual Pulse Stretcher
- MC675 — Motorola
- 349A/C — Teledyne S
- 349B/M — † Teledyne S

Quad Schmitt Trigger/Line Receiver
- 367A/C — Teledyne S
- 367B/M — † Teledyne S

Quad Schmitt Trigger/Line Receiver, Open Collector
- MC693 — Motorola
- 368A/C — Teledyne S
- 368B/M — † Teledyne S

Timer (See also Linear Timers)
- 355A/C — Teledyne S
- 355B/M — Teledyne S

† Military Temperature Range (−55° to 125°C)

* Typical Values

S2567	Rhythm Counter	HI V_T	-15V, -27V	400mW	14 Pin Plastic
S50240	Top Octave Synthesizer	P-I^2	-11V, -16V	360mW	16 Pin Plastic
S50241	Top Octave Synthesizer	P-I^2	-11V, -16V	360mW	16 Pin Plastic
S50242	Top Octave Synthesizer	P-I^2	-11V, -16V	360mW	16 Pin Plastic
S50243	Top Octave Synthesizer	P-I^2	-11V, -16V	360mW	16 Pin Plastic
S50244	Top Octave Synthesizer	P-I^2	-11V, -16V	360mW	16 Pin Plastic
S50145	Top Octave Synthesizer	P-I^2	-11V, -16V	360mW	16 Pin Plastic
S8890	Rhythm Generator	P-I^2	-12V	400mW	40 Pin Plastic
S9660	Rhythm Generator	P-I^2	-12V	400mW	28 Pin Plastic

Remote Control Circuits

Part No.	Description	Process	Power Supplies	I/O Bits	Packages
S2600	Remote Control Transmitter	CMOS	+7V to +10V	11	16 Pin Plastic
S2601	Remote Control Receiver	P-I^2	+10V to +18V	5	22 Pin Plastic

Also available from AMI is the S2742/S2743/S2744 three-chip set for serial data encoding, decoding, and sequencing. The S2742 is the serial data decoder; the S2743 is the serial data encoder; the S2744 is the sequencer. The circuits are designed for coded remote control applications. Very few external parts are needed for most applications.

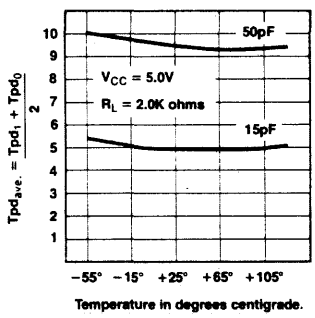
Total Low-Power Schottky From Raytheon 25LS/9LS/54LS/74LS



Raytheon offers the full performance range of low-power Schottky devices: The new military standard 9LS, the high-performance 25LS, the old military standard 54LS and the industrial/commercial standard 74LS.

Raytheon specifies the more stringent JAN 38510 AC load measurements, as well as the standard 15pF and 2K ohms load. The AC parameters for both loads are specified across the full operating temperature range. Raytheon has compiled the most comprehensive specifications available in the industry. See for yourself that Raytheon standard products will meet or exceed your most demanding requirements.

Development Plan Raytheon is one of the largest suppliers of both flat packs and dual-in-line ceramic packages to the military market. We have 99 types available now, including 34 JAN qualified devices, with an additional 25 new products in development.

	NOW	1978	TOTAL
GATES	40	0	40
FLIP-FLOPS	9	0	9
MSI	50	25	75
TOTAL	99	25	124

For your own full digital product catalog, contact your local distributor or Raytheon Company, Semiconductor Division, Dept. LS, 350 Ellis Street, Mountain View, California 94042, (415) 968-9211.

Low-Power Schottky Families

Parameter	Old Military Standard 54LS	New Military Standard 9LS	High-Permormance 25LS
I_{OL}	4mA($V_{OL(MAX)}$=0.4V)	4mA($V_{OL(MAX)}$=0.4V)	8mA($V_{OL(MAX)}$=0.45V)
I_{OSL}	15mA-100mA	15mA-100mA	15mA-100mA
t_{PLH}	20nS Max.	10nS Max.	10nS Max.
t_{PHL}	20nS Max.	10nS Max.	10nS Max.

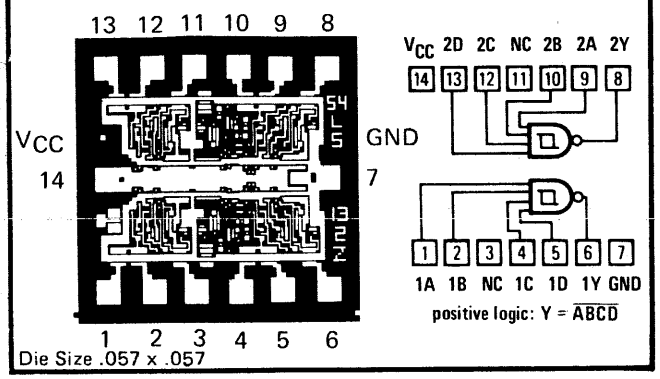
9LS/54LS/74LS LOW-POWER SCHOTTKY

Type	Description
LS00	Quad 2-input NAND gate
LS01	Quad 2-input NAND gate, OC
LS02	Quad 2-input NOR gate, OC
LS03	Quad 2-input NAND gate, OC
LS04	Hex inverter
LS05	Hex inverter, OC
LS08	Quad 2-input AND gate
LS09	Quad 2-input AND gate, OC
LS10	Triple 3-input NAND gate
LS11	Triple 3-input AND gate
LS12	Triple 3-input NAND gate, OC
LS13	Dual 4-input Schmitt trigger
LS14	Hex Schmitt trigger
LS15	Triple 3-input AND gate, OC
LS20	Dual 4-input NAND gate
LS21	Dual 4-input AND gate
LS22	Dual 4-input NAND gate, OC
LS26	Quad 2-input NAND, 15V, OC
LS27	Triple 3-input NOR gate
LS28	Quad 2-input NOR buffer
LS30	8-input NAND gate
LS32	Quad 2-input OR gate
LS33	Quad 2-input NOR buffer, OC
LS37	Quad 2-input NAND buffer
LS38	Quad 2-input NAND buffer, OC
LS40	Dual 4-input NAND buffer
LS42	1-of-10 decoder
LS43	Excess 3 to decimal decoder
LS44	Excess gray to decimal decoder
LS51	Dual AOI gate
LS54	2-3-3-2-input AOI gate
LS55	2-wide, 4-input AOI gate
LS73	Dual J-K flip-flop
LS74	Dual D flip-flop
LS75	Quad transparent latch
LS76	Dual J-K flip-flop
LS77	Quad transparent latch
LS78	Dual J-K flip-flop
LS83A	4-bit full adder
LS85	4-bit magnitude comparator
LS86	Quad exclusive OR gate
LS90	Decade counter
LS91	8-bit shift register
LS92	Divide by 12 counter
LS93	4-bit binary counter
LS95B	4-bit shift register
LS107	Dual J-K flip-flop
LS109	Dual J-K flip-flop
LS112	Dual J-K edge-triggered flip-flop
LS113	Dual J-K edge-triggered flip-flop
LS114	Dual J-K edge-triggered flip-flop
LS122	Retriggerable one-shot
LS123	Dual one-shot
LS125	Quad 3-state buffer, low enable
LS126	Quad 3-state buffer, high enable
LS132	Quad 2-input Schmitt trigger
LS136	Quad exclusive OR gate, OC
LS137	Decoder/demultiplexer
LS138	3-to-8 decoder/demultiplexer
LS139	Dual 2-to-4 decoder/demultiplexer
LS151	8-to-1 line multiplexer
LS152	8-to-1 line multiplexer
LS153	Dual 4-to-1 multiplexer
LS155	Dual 2-to-4 decoder/demultiplexer
LS156	Dual 2-to-4 decoder/demultiplexer, OC
LS157	Quad 2-to-1 line multiplexer
LS158	Quad 2-to-1 line multiplexer, inverting
LS160	Decade counter, async clear
LS161	Binary counter, async clear
LS162	Decade counter, sync clear
LS163	Binary counter, sync clear
LS164	8-bit shift register (SIPO)
LS170	4 x 4 register file, OC
LS174	Hex D-type flip-flop
LS175	Quad D-type flip-flop
LS181	4-bit arithmetic logic unit
LS190	BCD decade counter, mode control
LS191	4-bit binary counter, mode control
LS192	BCD decade counter, up/down
LS193	4-bit binary counter, up/down
LS194A	4-bit universal shift register
LS195A	4-bit parallel shift register
LS196	4-bit presettable decade counter
LS197	4-bit presettable binary counter
LS221	Dual one-shot (very stable)
LS240	Octal inverting bus driver
LS241	Octal non-inverting bus driver
LS242	Quad transceiver
LS243	Quad transceiver
LS244	Octal 3-state driver
LS251	8-to-1 line multiplexer, TS
LS253	Dual 4-to-1 multiplexer, TS
LS254	1-of-16 decoder, TS
LS255	Dual 2-to-4 decoder/demultiplexer, TS
LS257	Quad 2-to-1 line multiplexer, TS
LS258	Quad 2-to-1 line multiplexer, inverting, TS
LS261	2 x 4 binary multiplier
LS266	Quad exclusive NOR gate, OC
LS279	Quad set/reset latch
LS283	4-bit full adder, fast carry
LS295A	4-bit shift register, TS
LS298	Quad 2-multiplexer with output register
LS299	8-bit universal shift register
LS322	8-bit serial/parallel register with sign extender
LS323	8-bit shift/storage register with sync clear
LS365	Hex buffer, common enable, TS
LS366	Hex inverter, common enable, TS
LS367	Hex buffer, 4-bit and 2-bit, TS
LS368	Hex inverter, 4-bit and 2-bit, TS
LS373	Octal transparent latch
LS374	Octal D flip-flop
LS377	Octal D flip-flop with enable
LS384	8-bit serial/parallel two's compliment multiplier
LS385	Quad serial adder/subtractor
LS395A	4-bit shift register, TS
LS670	4 x 4 register file, TS

25LS HIGH-PERFORMANCE LOW-POWER SCHOTTKY



LS14	8-bit serial/parallel two's complement multiplier
LS15	Quad serial adder/subtractor
LS22	8-bit serial/parallel register with sign extender
LS23	8-bit shift/storage register with sync clear
LS122	Single retriggerable monostable multivibrator with clear
LS123	Dual retriggerable monostable multivibrator with clear
LS138	3-to-8 line decoder/demultiplexer
LS139	Dual 2-to-4 line decoder/demultiplexer
LS151	8-to-1 line multiplexer, complementary outputs
LS153	Dual 4-to-1 line multiplexer
LS157	Quad 2-to-1 line multiplexer
LS158	Quad 2-to-1 line multiplexer, inverting
LS160	BCD decade counter, async clear
LS161	4-bit binary counter, async clear
LS162	BCD decade counter, sync clear
LS163	4-bit binary counter, sync clear
LS170	4 x 4 register file, OC
LS174	Hex D-type flip-flop with clear
LS175	Quad D-type flip-flop with clear
LS181	4-bit arithmetic logic unit
LS190	BCD decade up/down counter, sync
LS191	4-bit binary up/down counter, sync
LS192	BCD decade up/down counter, sync
LS193	4-bit binary up/down counter, sync
LS194A	4-bit bidirectional universal shift register
LS195A	4-bit parallel access shift register
LS251	8-to-1 line multiplexer, TS
LS253	Dual 4-to-1 line data selectors/multiplexers, TS
LS257	Quad 2-to-1 line multiplexer, TS
LS258	Quad 2-to-1 line multiplexer, TS
LS299	8-bit universal shift/storage register
LS670	4 x 4 register file, TS

TS = tri-state outputs

OC = open collectors

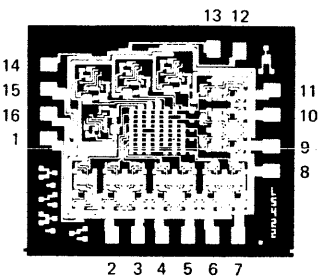
FEATURES

- All Outputs Are High for Invalid Input Conditions
- Also for Application as
  - 4-Line to 16-Line Decoders
  - 3-Line to 8-Line Decoders

DESCRIPTION

These monolithic decimal decoders consist of eight inverters and ten four-input NAND gates. The inverters are connected in pairs to make BCD input data available for decoding by the NAND gates. Full decoding of valid input logic ensures that all outputs remain off for all invalid input conditions.

The LS42 BCD-to-decimal decoders, the LS43 excess-3-to-decimal decoders, and the LS44 excess-3-gray-to-decimal decoders feature inputs and outputs that are compatible for use with most TTL and other saturated low-level logic circuits.



54LS circuits are characterized for operation over the full military temperature range of −55°C to 125°C; 74LS circuits are characterized for operation from 0°C to 70°C.

FUNCTION TABLE

INPUTS					3-STATE OUTPUTS				CASCADE OUTPUT
CLEAR	LOAD/SHIFT CONTROL	CLOCK	SERIAL	PARALLEL A B C D	Q_A	Q_B	Q_C	Q_D	Q_D
L	X	X	X	X X X X	L	L	L	L	L
H	H	H	X	X X X X	Q_{A0}	Q_{B0}	Q_{C0}	Q_{D0}	Q_{D0}
H	H	↓	X	a b c d	a	b	c	d	d
H	L	H	X	X X X X	Q_{A0}	Q_{B0}	Q_{C0}	Q_{D0}	Q_{D0}
H	L	↓	H	X X X X	H	Q_{An}	Q_{Bn}	Q_{Cn}	Q_{Cn}
H	L	↓	L	X X X X	L	Q_{An}	Q_{Bn}	Q_{Cn}	Q_{Cn}

When the output control is high, the 3-state outputs are disabled to the high-impedance state; however, sequential operation of the registers and the output at Q_D are not affected.

H = high level (steady state), L = low level (steady state), X = irrelevant (any input, including transitions)
↓ = transition from high to low level.
Q_{A0}, Q_{B0}, Q_{C0}, Q_{D0} = the level of Q_A, Q_B, Q_C, or Q_D, respectively, before the indicated steady state input conditions were established.
Q_{An}, Q_{Bn}, Q_{Cn}, Q_{Dn} = the level of Q_A, Q_B, Q_C, or Q_D, respectively, before the most recent ↓ transition of the clock.

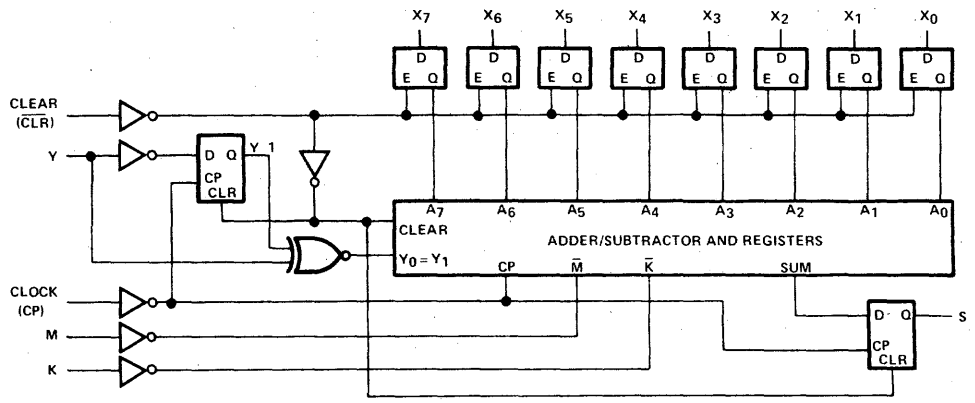
FEATURES

- Two's Complement Multiplication Without Correction
- Magnitude Only Multiplication
- Cascadable for any Number of Bits
- 8-Bit Parallel Multiplicand Data Input
- Serial Multiplier Data Input
- Serial Data Output for Multiplication Product
- 25 MHz Minimum Clock Frequency
- 100% Reliability Assurance Testing in Compliance With MIL-STD-883

FUNCTIONAL DESCRIPTION



The 25LS14 is an 8-bit by 1-bit sequential logic element that performs digital multiplication of two numbers represented in two's complement form to produce a two's complement product without correction by using Booth's algorithm internally. The device accepts an 8-bit multiplicand (X input) and stores this data in eight internal latches. The X latches are controlled via the clear input. When the clear input is LOW, all internal flip-flops are cleared and the X latches are opened to accept new multiplicand data. When the clear input is HIGH, the latches are closed and are insensitive to X input changes.

The multiplier word data is passed by the Y input in a serial bit stream—least significant bit first. The product is clocked out the S output least significant bit first.

The multiplication of an m-bit multiplicand by an n-bit multiplier results in an m + n bit product. The 25LS14 must be clocked for m + n clock cycles to produce this two's complement product. Likewise, the n-bit multiplier (Y-input) sign bit data must be extended for the remaining m-bits to complete the multiplication cycle.

The device also contains a K input so that devices can be cascaded for longer length X words. The sum (S) output of one device is connected to the K input of the succeeding device when cascading. Likewise, a mode input (M) is used to indicate which device contains the most significant bit. The mode input is wired HIGH or LOW depending on the position of the 8-bit slice in the total X word length.

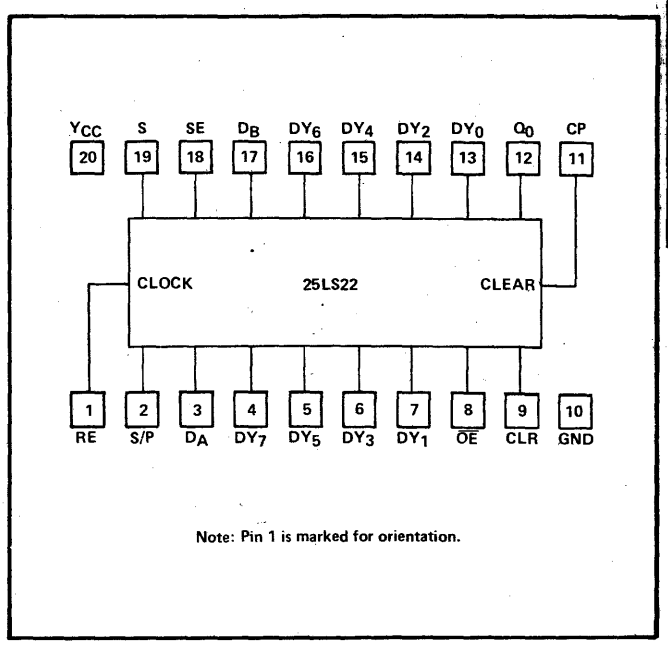
X = Don't Care
NC = No Change
H = HIGH
L = LOW
↑ = LOW-to-HIGH Transition

DEFINITION OF FUNCTIONAL TERMS

A_1,A_2,A_3,A_4 The "A" input into each adder/subtractor

B_1,B_2,B_3,B_4 The "B" input into each adder/subtractor



S_1,S_2,S_3,S_4 The add subtract control for each adder/subtractor. When S is LOW, the F function is A+B. When S is HIGH, the F function is A–B.

F_1,F_2,F_3,F_4 The four independent serial outputs of the adder/subtractor.

CP Clock The clock input for the device. All internal flip-flops change state on the LOW-to-HIGH transition.

CLR Clear When the clear input is LOW, the four independent adder/subtractors are asynchronously reset. The sum flip-flop is always set to logic "0". The carry flip-flop is set to logic "0" in the add mode and logic "1" in the subtract mode.

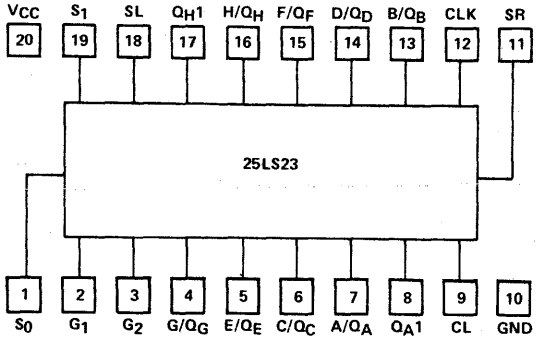
8-Bit Shift/Storage Register with Synchronous Clear 25LS23

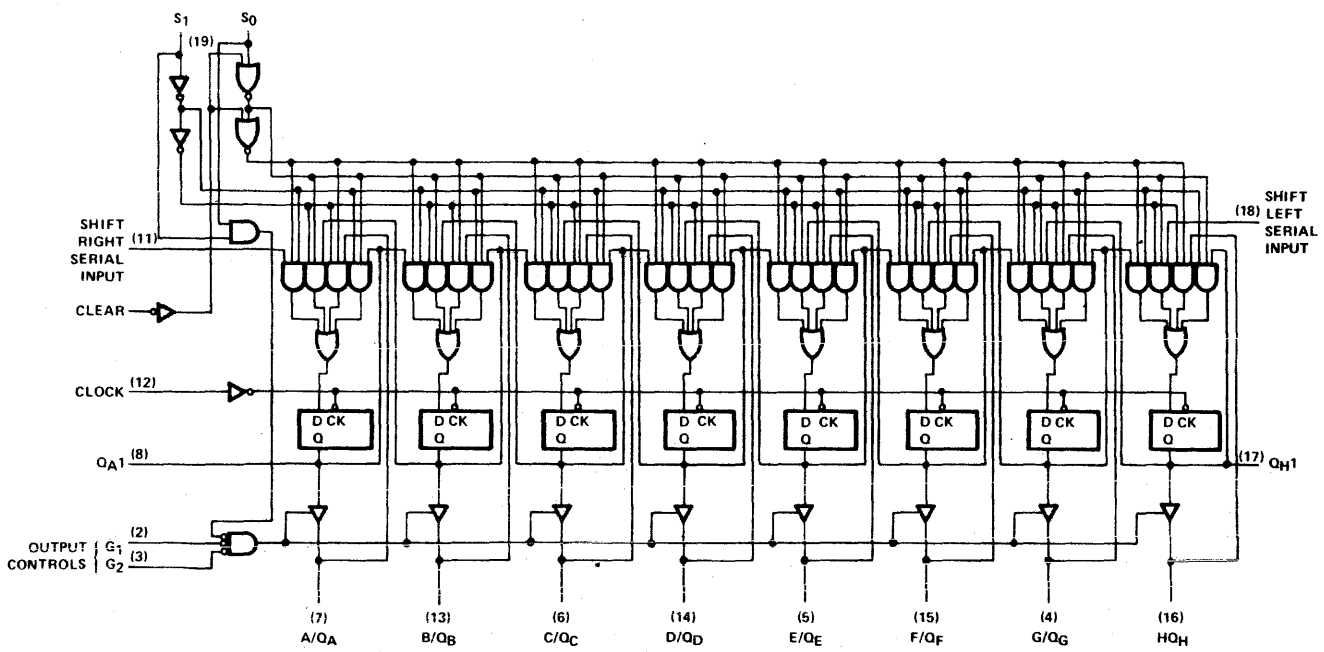
FEATURES



- Synchronous Clear
- Three-State Outputs
- Common Input/Output Pins
- Advanced Low-Power Schottky Processing
- 100% Reliability Assurance Testing in Compliance With MIL-STD-883

DESCRIPTION

The 25LS23 is an 8-bit universal shift/storage register with 3-state outputs. The function is similar to the 25LS299 with the exception of a synchronous clear function. Parallel load inputs and register outputs are multiplexed to allow the use of a 20-pin package. Separate continuous outputs are also provided for flip-flops A and H.



Four modes of operation are possible—Hold (store), Shift-left, Shift-right and Load Data. The 25LS23 has a typical shift frequency of 50MHz. The 25LS23 is packaged in a standard 20-pin package.

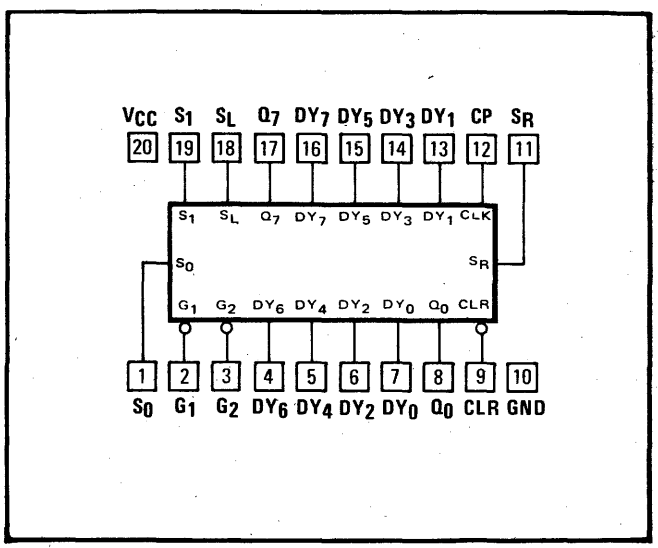
FEATURES

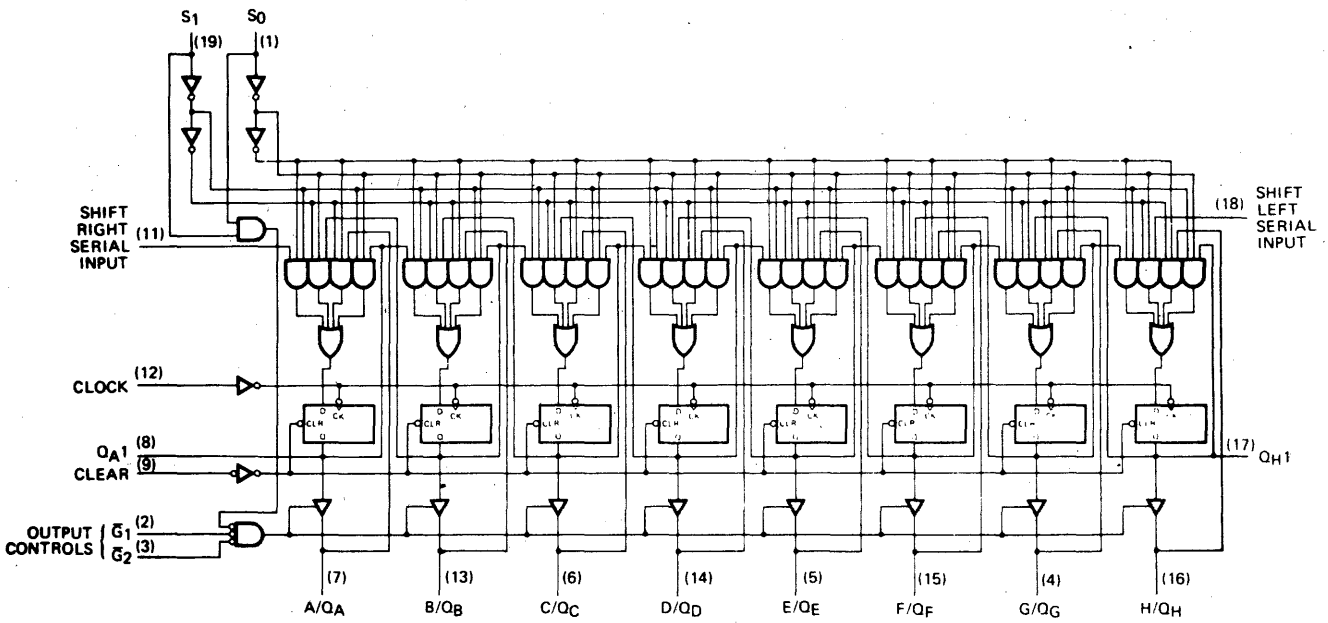
- Four operational modes
- Three-state outputs
- Common input/output pins
- Cascadable shifting
- Advanced Low-Power Schottky processing
- 100% reliability assurance testing in compliance with MIL-STD-883

DESCRIPTION



The 25LS299 is an 8-bit universal shift/storage register with 3-state outputs. Four modes of operation are possible—Hold (store), shift left, shift right and load data.

Parallel load inputs and register outputs are multiplexed to reduce the number of package pins. Separate continuous outputs are also provided for flip-flop Q_0 and Q_7. These devices can be cascaded to N-Bit words.



The 25LS299 has a typical shift frequency of 50 MHz; and is packaged in the standard 20-pin DIP package.

A separate active-LOW asynchronous clear input forces all flip-flops to the LOW state whenever this clear input is LOW.

Recommended Operating Conditions

	Military			Commercial			Unit
	Min	Nom	Max	Min	Nom	Max	
Supply Voltage, V_{CC}	4.5	5	5.5	4.75	5	5.25	V
High-Level Output Current, I_{OH}		-0.44	-1.0		-0.44	-2.6	mA
Low-Level Output Current, I_{OL}	4		8	4		8	mA
Operating Free-Air Temperature, T_A	-55		125	0		70	°C

Electrical Characteristics Over Recommended Free-Air Temperature Range (Unless Otherwise Noted)

Parameter		Test Conditions*			Military			Commercial			Unit
					Min	Typ**	Max	Min	Typ**	Max	
V_{IH}		Guaranteed input logical HIGH voltage for all inputs			2			2			V
V_{IL}		Guaranteed input logical LOW voltage for all inputs					0.7			0.8	V
V_I		V_{CC}=MIN., I_{IN}= -18mA					-1.5			-1.5	V
V_{OH}		V_{CC}=MIN. V_{IN}=V_{IH} or V_{IL}	Q_0,Q_7	I_{OH}=-0.44mA	2.5			2.7			V
			DY_0,DY_7	I_{OH}=-1.0mA	2.4						V
				I_{OH}=-2.6mA				2.4			
V_{OL}		V_{CC}=MIN. V_{IN}=V_{IH} or V_{IL}		I_{OL} = 4.0mA		0.25	0.40		0.25	0.40	V
				I_{OL} = 8.0mA		0.30	0.45		0.30	0.45	
I_I	S_0, S_1	V_{CC}=MAX., V_{IN} = 5.5V					0.2			0.2	mA
	All others						0.1			0.1	
I_H	S_0, S_1	V_{CC}=MAX., V_{IN} = 2.7V					40			40	μA
	All others						20			20	
I_{IL}	S_0, S_1	V_{CC}=MAX., V_{IN} = 0.4V					-0.8			-0.8	mA
	All others						-0.4			-0.4	
I_O		V_{CC} = MAX.		V_0= 0.4V			-100			-100	μA
				V_0= 2.7V			40			40	
I_{OS}		V_{CC} = MAX., See Note 3			-30		-85	-30		-85	mA
I_{CC}		V_{CC} = MAX., See Note 4				38	57		38	57	mA

Notes: 1. For conditions shown as MIN. or MAX., use the appropriate value specified under Electrical Characteristics for the applicable device type.

2. Typical limits are at V_{CC} = 5.0 V, 25°C ambient and maximum loading.

3. Not more than one output should be shorted at a time. Duration of the short circuit test should not exceed one second.

4. I_{CC} – measured with clock input HIGH and output controls HIGH.

INTRODUCTION TO INTERFACE

INTERFACE.....

The Master Selection Guide provides sufficient information to make initial product selections, to lead you to a group of device numbers and manufacturers' names. It enables you to find the products which are most appropriate to fulfill your major requirements and then provides data for many of the more important products.

All devices that appear in this section, both in the initial selection guide and in the data pages, are included in the Part Number and Product Indexes. These index listings lead to the page and the line on that page where each device appears.

In the Interface Section the selection parameters differ drastically for each category; therefore, each has its own format. The analog to digital converter category has two formats: one for binary output devices and another for decimal units. Some of the products in this section, primarily analog to digital and digital to analog converters, are hybrids; the ones listed are those packaged to be compatible with IC's.

This section is not complicated by reference to package styles; the package style suffixes are usually deleted. For more information on each companies' suffixes, see the Part Number Guide. Throughout the Master Selection Guide, each full military temperature range (−55°C to 125°C) device is indicated by a dagger (†) before the manufacturer's name. Manufacturers' names are normally spelled out; however, a few are abbreviated and the abbreviations are explained on page 176.

INTERFACE–Analog to Digital Converters

Binary Output

In this section devices with multiple codes follow those with single codes rather than repeating under each heading. Also devices are listed by the number of output bits even though their linearity corresponds to lower accuracy. Therefore when looking for devices to fill particular requirements, it is necessary to review all possibilities.

Bits-Code	Conversion Time µs	Linearity Error ±%FS	Supply Voltage	Device	Source	Line

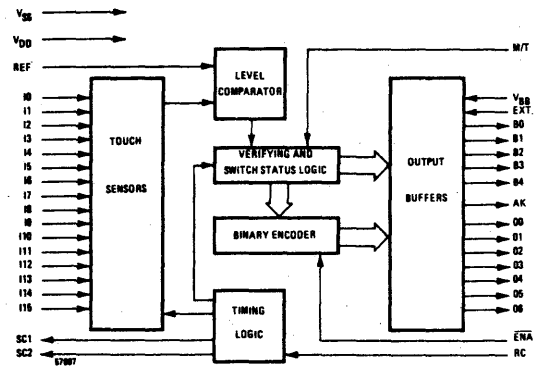
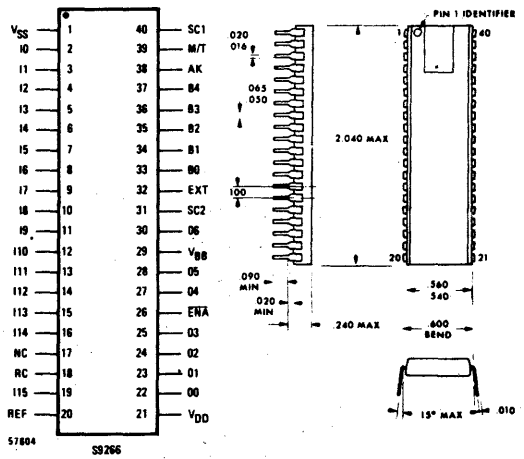
Multiplexed TouchControl™ Interface



ADVANCED PRODUCT DESCRIPTION



BLOCK DIAGRAM – S9262 (14 SWITCHES)

PIN/PACKAGE CONFIGURATION – S9262

BLOCK DIAGRAM – S9266 (32 SWITCHES)

PIN/PACKAGE CONFIGURATION – S9266

FEATURES

- Simplifies design of Touch-sensitive switches
- Interfaces with up to 32 touch switches
- Eliminates contact noise
- Comparator sensing permits use with wide variety of touch switch configurations
- Binary outputs provided
- Outputs are TTL compatible
- Permits design of totally isolated touch surfaces, facilitating UL approval

FUNCTIONAL DESCRIPTION

Both circuits multiplex the inputs to increase the number of TouchControl switches to which each circuit can connect. All scanning is performed by the internal circuitry with an external RC network used to establish the frequency. The S9262 can connect to a 2x7 switch matrix to interface with 14 TouchControl switches. The S9262 outputs are encoded in binary on four pins. The S9266 can connect to a 2x16 switch matrix to interface with 32 TouchControl switches. Outputs are encoded in binary on five pins. An enable input is provided to allow use of several circuits in one system. All outputs are open drain with the sources connected to the V_{BB} input. This allows easy driving of TTL, CMOS, PMOS or discrete circuitry.

TCK-100 TouchControl™ Kit

The AMI TouchControl kit demonstrates the ease with which this unique system of capacitive switching may be implemented. Included in the kit are a printed circuit board and AMI's S9263 TouchControl circuit. The printed wiring board, which has sixteen touch switches etched into its top surface, contains on its reverse side all the interconnection necessary to interface the S9263 outputs with sixteen light emitting diodes. Additional components required for the kit are readily available, and assembly of the kit should take less than an hour's time.

The TouchControl™ Concept

TouchControl™ panels replace mechanical switches with non-moving electronically sensitive glass (or other material panels that respond to the touch of a finger. The most apparent advantage of TouchControl is the visual appeal of a flat keyboard, which may be designed in a wide variety of patterns and colors. In addition to the advanced styling features, TouchControl also offers several practical benefits, such as the reliability of non-moving electronic controls and electrical isolation of the entire switch area. TouchControl also provides safety advantages, complete moisture proofing and ease of cleaning. Contact your nearest AMI Sales Office for additional information about the TouchControl concept.

Typical Applications

- Appliance Control Panels
- Home Entertainment Systems
- Power Tool Controls
- Television Sets
- Automotive Controls
- Telephones
- Games
- Industrial Controllers
- Computer Terminals
- Keyboards
- Instrumentation
- 16-to01 Multiplexers
- Microprocessor Interface

TouchControl™ Kit

FEATURES

- 16 TouchControl Switches can Operate in Different Modes
- Quick and Convenient for Demonstrating TouchControl Concept
- Interfaces Easily to External Logic for Prototype Development
- Can Drive up to 16 LED Indicators
- Provisions for Adding Power Supply Components (for 115 VAC Operation)

PARTS LIST FOR AMI TOUCHCONTROL KIT:

QUANTITY REQUIRED	DESCRIPTION
1	S9263 TouchControl circuit (Included)
1	Printed wiring board (Included)
1	Transformer, 12.6 volt 300mA Radio Shack P/N 273-1385 or equivalent
1	Line cord
1	Diode IN920 or equivalent
2	100KΩ Resistor ¼ Watt
1	60KΩ Resistor ¼ Watt
1	15KΩ Resistor ¼ Watt
1	10KΩ Resistor ¼ Watt
16	3.3KΩ Resistor ¼ Watt
1	Transistor 2N3569 or equivalent
1	500μF capacitor/20 volts
1	0.33μF capacitor
1	270 pF capacitor
16	Light emitting diode — MV5023 or equivalent
1	Aluminum chassis box–15" x 9" Bud No. AC1421 or equivalent (optional)

ASSEMBLY

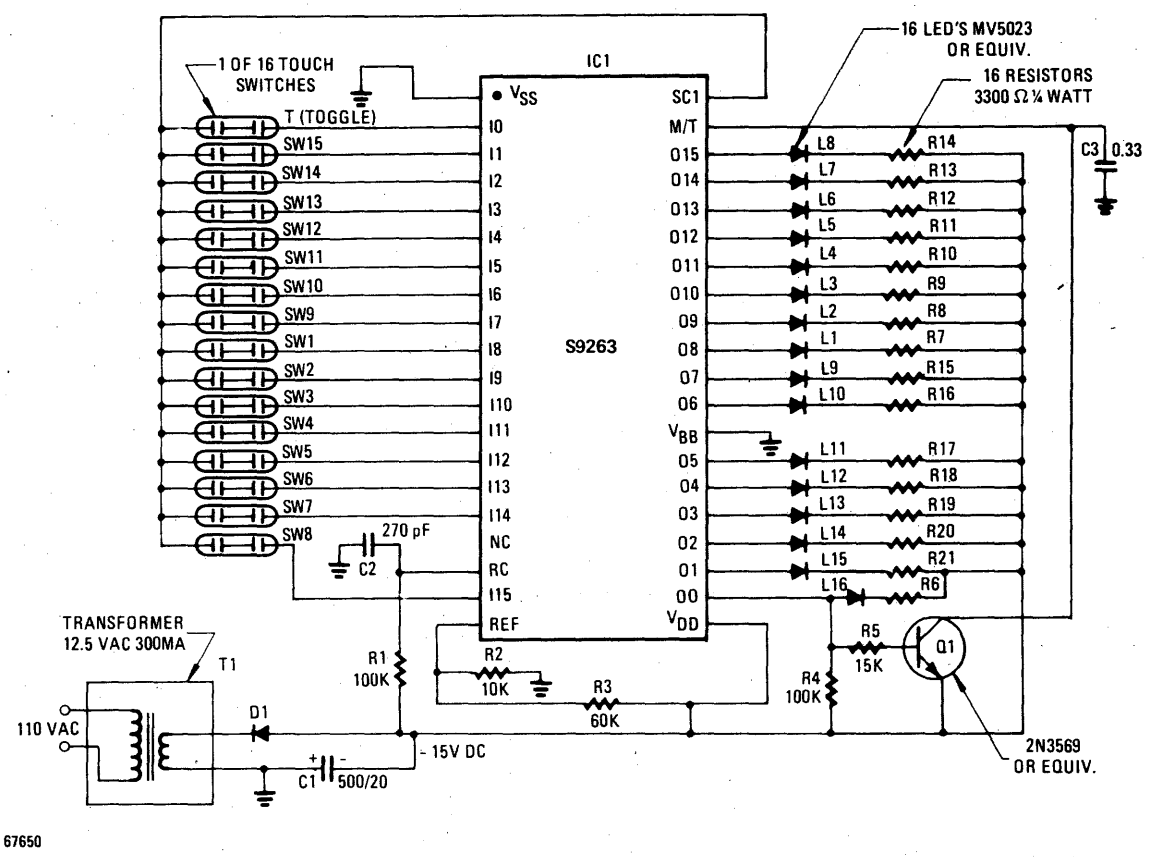
The circuit board may be assembled easily by referring to Figure 2, a view of the reverse side of the board. For appearance, it is recommended that all components except the LED's and the S9263 be mounted on the reverse side of the board, with all leads cut off flush with the board's top surface.

For convenience, a 15 volt power supply is provided on the circuit board, so that the system may be plugged into a standard 110 volt outlet. If desired, an external DC supply of 15 volts may be used, connecting the positive and negative outputs to the corresponding holes designated for C1. If a DC supply is used, the transformer, diode, and C1 may be eliminated.

INTRODUCTION

The AMI TouchControl kit demonstrates the ease with which this unique system of capacitive switching may be implemented. Included in the kit are a printed circuit board and AMI's newly developed S9263 TouchControl circuit. The printed wiring board, which has 16 touch switches etched onto its top surface, contains on its reverse side all the interconnection necessary to interface the S9263 inputs with the 16 touch switches and the S9263 outputs with 16 light emitting diodes. As the touch switches are activated, the corresponding diodes are lighted to indicate the output states of the S9263. If desired, external logic may be operated by connecting a cable directly to the S9263 outputs.

Additional components required for the kit are readily available, and assembly of the kit should take less than an hour's time. The circuit board may be mounted either on standoffs or on a standard aluminum chassis box.



OPERATION

The AMI TouchControl kit provides sixteen touch switches that interface with the S9263 to activate sixteen light emitting diodes. Each of the switches numbered from one to fifteen has a light associated with it which is labeled with the same number. The switch labeled "T" is used to select the mode of operation of the S9263, either momentary or toggle. When the LED labeled "T" is off, touch pads one through fifteen operate as momentary switches, and any switch's corresponding LED will turn on when the switch is touched, remaining on only for the duration of touching the switch. If "T" is touched, the "T" LED will turn on and stay on even after "T" is untouched. The S9263 is now operating in a toggle mode, and the brief touch of any switch from one through fifteen will cause its corresponding LED to turn on and latch. Subsequent activations of the switch will turn the LED off and on alternately. Touching "T" once again causes the "T" LED to turn off, and the S9263 once again operates in the momentary mode. By removing the 0.33μF capacitor, it is possible to use the "T" pad as a clear switch. In this mode, all numbered pads function as "push on, push off"

©IC MASTER 1978

switches. Touching the "T" pad turns off all LED's corresponding to the numbered switches.

To operate external logic systems with the Touch-Control kit, a cable may be soldered, using a grounded soldering iron, directly to the outputs of the S9263. The voltage on an output that is turned off (corresponding LED is off) is - 15 volts (or V_{DD}). When turned on, the output will rise towards ground (V_{SS}). Appropriate loading conditions are specified in the advanced product description for this part.

Universal Asynchronous Receiver/Transmitter (UART)

S1883 BLOCK DIAGRAM

PIN/PACKAGE CONFIGURATION

FEATURES

- 12.5 K Baud Data Rates
- 5-8 Bit Word Length
- Parity Generation/Checking Odd, Even, None
- Framing and Overflow Error Detection
- 1, 1.5, or 2 Stop Bits
- Double Buffered Input/Output
- Independent Transmit/Receive Rates
- Start and Stop Bits Generated and Detected
- Interchangeable with TMS6011, COM2017, TR1602, AY-5-1013
- Tri-State Outputs

FUNCTIONAL DESCRIPTION

The S1883 Universal Asynchronous Receiver Transmitter (UART) is a single chip MOS/LSI device that totally replaces the asynchronous parallel to serial and serial to parallel conversion logic required to interface a word parallel controller or data terminal to a bit serial communication network.

For asynchronous data transmission with a non-contiguous data bit stream, the UART automatically inserts a START bit preceding each character and under program control 1, 1.5, or 2 stop bits at the end of each character. To detect incoming characters in a noisy environment the UART employs a START bit detection network and allows errorless recovery of data with up to 42% distortion.

The UART will transmit or receive data characters of 5, 6, 7, or 8 bit length. Options allow the generation and checking of odd, even parity or no parity. The odd or even parity bit is automatically added to the character length for transmission. The parity bit is removed, checked and an error flag set if incorrectly received.

The data or baud rate at the receiver input and transmitter output are determined independently by external clock inputs. The clock inputs must be 16 times the data rate required at the serial input and output. The independent clocks allow for either half or full duplex operation.

The UART provides a buffer register in both the transmitter and receiver to allow a full character time for responding to a received data ready or transmit data request signal. The UART generates a MARK signal if the transmit register is not loaded with a data character and also indicates an overflow error if two characters are received without a RDA input.

©IC MASTER 1978

TYPICAL APPLICATIONS

- Computer Peripherals
- Communication Concentrators
- Integrated Modems
- Industrial Data Transmission
- TTY Terminals
- Time Division Multiplexing

ABSOLUTE MAXIMUM RATINGS

Ambient Temperature Under Bias	0°C to +70°C
Storage Temperature	−65°C to +150°C
Positive Voltage on Any Pin with Respect to V_{SS}	+.3 Volt
Negative Voltage on Any Pin with Respect to V_{SS}	−20.0 Volt

NOTE: Stresses greater than those listed as Maximum Ratings may cause permanent damage to the device. Functional operation of the device at these or any other conditions above those indicated in the operation section of this specification are not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

DC (STATIC) CHARACTERISTICS

$T_A = 0° - +70°C$, $V_{SS} = +5$ Volt ±5%, $V_{GG} = -12$ Volt ±5%

Symbol	Parameter	Min	Max	Unit	Condition
V_{IH}	Input High Voltage	V_{SS} -1.0	V_{SS} +0.3	Volt	Internal Pull-up

TIMING WAVEFORMS (Figure 1)

PIN DEFINITIONS

Pin	Label	Function
(1)	V_{SS}	+5 Volt ± 5%
(2)	V_{GG}	−12 Volt ± 5%
(3)	V_{DD}	Ground
(21)	RESET	The transmitter status outputs TBMT and TEOC are set to V_{OH} indicating the input transmitter buffer register is empty. The TSO output generates V_{OH} or MARK until a valid data character has been loaded into the transmitter and valid data transmission begins. The receiver status output ODA, is reset to the V_{OL} state.
(38)	NDB1	Number Data Bits/Character
(37)	NDB2	Number Data Bits/Character
(36)	NSB	Number Stop Bits The bit length of each data character and the number of stop bits added to each transmitted character are defined by these three inputs. The character word length does not include the parity bit and is common to both the transmitter and receiver if operating in the full duplex mode.

NSB	NDB2	NDB1	BITS/CHARACTER	STOP BITS
V_{IL}	V_{IL}	V_{IL}	5	1
V_{IL}	V_{IL}	V_{IH}	6	1
V_{IL}	V_{IH}	V_{IL}	7	1
V_{IL}	V_{IH}	V_{IH}	8	1
V_{IH}	V_{IL}	V_{IL}	5	1.5
V_{IH}	V_{IL}	V_{IH}	6	2
V_{IH}	V_{IH}	V_{IL}	7	2
V_{IH}	V_{IH}	V_{IH}	8	2

(35)	NPB	NO PARITY BIT. A V_{IH} eliminates the PARITY bit from being transmitted causing the STOP bit(s) to immediately follow the last data bit. The receiver assumes the bit(s) following the last data bit to be STOP bits. The RPE output is also forced to a V_{OL} condition.
(39)	POE	PARITY ODD/EVEN. If the NPB input is V_{IL}, the parity mode is ODD if POE is V_{IL} and EVEN if POE is V_{IH}. The parity mode is the same for both the transmitter and receiver.
(34)	CS	CONTROL STROBE. A V_{IH} loads POE, NDB1, NDB2, NPB, NSB into the CONTROL HOLDING REGISTER. To load the control inputs for static operation CS can be hard-wired to V_{IH}.
(26)	DB1	TRANSMITTER DATA BITS. Input data on DB1-DB8 are strobed into the DATA INPUT
(27)	DB2	HOLDING REGISTER by $\overline{TDS}$.
(28)	DB3	Input data is assumed right justified so DB1 is always the least significant bit and is the bit
(29)	DB4	
(30)	DB5	

©IC MASTER 1978

Pin	Label	Function
(31) (32) (33)	DB6 DB7 DB8	transmitted following the START bit. For data words less than eight bits, the unused bits are don't care inputs.
(23)	$\overline{TDS}$	TRANSMITTER DATA STROBE. A V_{IL} enters data on the DB1-DB8 inputs into the INPUT HOLDING REGISTER. If the transmitter is in the idle state with both TBMT and TEOC at V_{OH}, the START bit will be generated on the first negative transition of the input clock TCP following the return of $\overline{TDS}$ to a V_{IH} state.
(25)	TSO	TRANSMITTER SERIAL OUTPUT. Data entered on DB1-DB8 are serially transmitted on TSO. A START (SPACE) bit precedes each character. A PARITY bit, if selected, and the correct number of STOP bits follow the last valid data bit. The TSO output is V_{OH} (MARK) when a valid character is not being transmitted.
(22)	TBMT	TRANSMITTER BUFFER EMPTY. A V_{OH} indicates the character in the INPUT HOLDING REGISTER has been transferred into the transmitter and a new character may be loaded into the INPUT HOLDING REGISTER. One complete character time (START BIT, DATA BITS, PARITY BIT, AND STOP BIT(S)) is available to load the next character. If a $\overline{TDS}$ is not generated within the time allotted, the TSO output will go into an idle state of V_{OH} or a MARK condition. TBMT will remain in the tri state mode unless $\overline{SWE}$ is a U_{ZL}.
(24)	TEOC	TRANSMITTER END OF CHARACTER. A V_{OL} to V_{OH} transition indicates the transmission of the character and stop bits have been completed. The V_{OH} is maintained until the leading edge of the next START bit (MARK to SPACE transition) is generated.
(40)	TCP	TRANSMITTER CLOCK PULSE. The transmitter input clock must be 16 times faster than the desired baud rate at TSO.
(17)	RCP	RECEIVER CLOCK PULSE. The receiver input clock must be 16 times the baud rate of data received on RSI.
(20)	RSI	RECEIVER SERIAL INPUT. Serial input data is received on RSI at a baud rate 1/16th the rate of RCP. The V_{IH} to V_{IL} (MARK to SPACE) transition beginning each START bit synchronizes the receiver to the incoming data. Data is assumed to be received least significant bit first.
(12) (11) (10) (9) (8) (7) (6) (5)	RD1 RD2 RD3 RD4 RD5 RD6 RD7 RD8	RECEIVER DATA. Data outputs from the DATA OUTPUT HOLDING REGISTER are active only when $\overline{RDE}$ is a V_{IL}. The eight data outputs are in a tri-state mode if $\overline{RDE}$ is a V_{IH}. Data is presented at the outputs right justified with RD1 the least significant bit. For data word lengths less than 8 bits the unused bits will appear as V_{OL}.
(4)	$\overline{RDE}$	RECEIVER DATA ENABLE. A V_{IL} enables data in the DATA OUTPUT HOLDING REGISTER to the RECEIVER DATA output pins. For an output configuration not requiring a tri-state condition for RD1-RD8 the RDE input can be tied directly to ground enabling the data outputs at all times.
(19)	ODA	OUTPUT DATA AVAILABLE. A V_{OH} indicates a complete character has been received and transferred to the DATA OUTPUT HOLDING REGISTER. The ODA output will be in the tri-state mode unless $\overline{SWE}$ is a V_{IL}. For contiguous data inputs on RSI data will remain in the holding register one character time before being lost.
(18)	$\overline{RDA}$	RESET DATA AVAILABLE. A V_{IL} resets the ODA to a V_{OL}. If ODA is not reset by $\overline{RDA}$ the ROR will be set when the next complete character is received and transferred to the DATA OUTPUT HOLDING REGISTER.
(15)	ROR	RECEIVER OVERRUN. A V_{OH} indicates a second character has been received and transferred to the DATA OUTPUT HOLDING REGISTER without an intervening $\overline{RDA}$. If the previously received character has not been unloaded from the register the next character will be loaded and the first character lost. ROR will remain in the tri-state mode unless $\overline{SWE}$ is a V_{IL}.
(14)	RFE	RECEIVER FRAMING ERROR. A V_{OH} indicates a correct STOP bit was not received following the START bit and correct number of data bits. RFE will remain in the tri-state mode unless $\overline{SWE}$ is a V_{IL}.

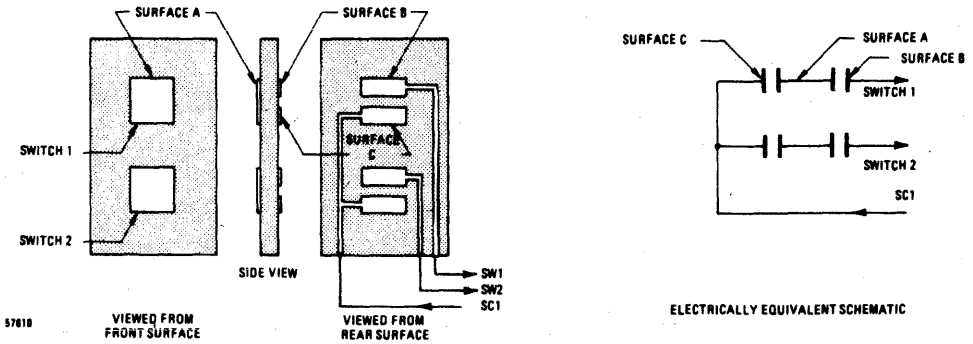

FIGURE 3. CONSTRUCTION OF A TWO SWITCH TOUCHCONTROL PANEL WITH EQUIVALENT ELECTRICAL CIRCUIT.

The application of the conductive surfaces depends on selection of the panel materials. If glass is used, for example, it is common to apply a coating of tin oxide, which is then fired on for durability; rear surface conductors may be screened on with a conductive ink. Touch panels may be made more simply from double-sided printed circuit boards in which the conductive TouchControl surfaces are created by standard etching. For breadboarding purposes, a number of conductive tapes and paints are available and may be applied to a variety of touch panel materials.

ELECTRICAL OPERATION

The three conductive surfaces in a TouchControl switch combine to form two capacitors connected in series, as shown in the schematic diagram of Figure 3. An AC signal generated in the MOS circuit is applied to the rear conductive surface labeled C. This signal is coupled through to surface A by the capacitor formed by C and A. The signal is then coupled to surface B by the capacitor formed by A and B and applied to one of the inputs of the MOS circuit, which detects the signal's presence. When surface A is touched, the amplitude of the signal is significantly decreased because of body capacitance. This is sensed by the MOS circuit, and the appropriate switching function is performed.

TOUCH SWITCH LAYOUT GUIDELINES

AMI TouchControl circuits have been designed to interface with a variety of touch switch configurations. However, there are several guidelines that must be observed to insure a satisfactory TouchControl system.

The size of a TouchControl switch is dependent on the amount of capacitance needed to couple the clock signal to the "I" inputs of the MOS circuits. Because the input capacitance associated with the circuit input is typically five picofarads, it is advisable that each of the two series capacitors formed by the three conductive TouchControl panel surfaces be no less than seven picofarads. Since the capacitance in picofarads can be calculated by $C = 0.22 \in A \div d$, where $\in$ is the dielectric constant, A is area, and d is the material's thickness, it is apparent that minimum switch size is dependent on the thickness and dielectric constant of the panel material. If, for example, the panel is made from 1/8" thick glass with a dielectric constant of 8, then the minimum area of each of the two rear surface conductors is 0.5 sq. inches. Since the touch surface must cover the entire area of the two rear conductors, it must, then, be at least 1.0 sq. inch. It is desirable to separate the two rear-surface conductors by at least 0.125 inches, so the touch surface would be somewhat larger than 1.0 sq. inch. Higher capacitance, and thus smaller touch switches, can be obtained by using epoxy printed circuit material; though the dielectric constant is lower (around 5.0) the thickness can be decreased substantially.

CIRCUIT TO PANEL CONNECTIONS

There are a number of ways to make the necessary connections between TouchControl circuits and panels. A simple approach is to use a printed circuit board for the touch panel. In this case, the connections to the circuit are made by the etched copper pattern. In laying out a printed circuit, it is important to keep the copper traces running to the individual touch pads separated from each other as much as possible. In most instances a minimum spacing of 0.125" between traces is acceptable, though wider spacing might be necessary in cases where traces will run parallel to each other for distances of over six inches. It is also important to keep the clock output (SC1) at least 0.75 inches away from any input trace. These spacing requirements are guidelines to be followed regardless of the touch panel material.

With glass touch panels, a simple method for breadboarding systems is to fasten individual wires onto the conductive surfaces with a conductive epoxy. For production situations, it is possible to locate the electronic circuitry on a separate printed circuit board. Contact to the glass touch panel can be made through spring contacts mounted in the appropriate locations on the circuit board. An alternate approach is to route the traces on the glass to an edge of the glass, making connection through an edge connector, keeping in mind the spacing requirements between traces.

ENA INPUT

Available on the S9266, the $\overline{ENA}$ input allows the outputs to be bussed and may be gated off by application of a logic 1 level. V_{SS} applied to the input enables all five outputs and AK.

EXT

The EXT pin is available on the S9266 and is used to supply a higher clock voltage to the TouchControl panel whenever that may be necessitated by smaller touch switch size. When the higher clock voltage level for SC1 and SC2 is not required, this pin should be connected to V_{DD}.

TOUCHCONTROL APPLICATION NOTES

PANEL CONSTRUCTION

A TouchControl switch panel consists of a single sheet of a rigid material with conductive surfaces applied on both sides as shown in Figure 3.

A number of materials may be used for touch panels, the selection of the material most suited for a particular application being dependent on such things as durability, appearance, ease of assembly, cost, and dielectric constant of the material.

Regardless of the selected panel material, a touch switch is formed by applying a single conductive surface to its front surface with two other conductive surfaces applied directly in line on the reverse side of the panel. Figure 3 shows three views of a typical touch panel containing two TouchControl switches. On switch one, conductive surface A is applied to the front of the panel and is the surface to be touched to effect a switch closure. Surfaces B and C are applied directly in line with A on the opposite side of the panel. A should cover completely and may overlap surfaces B and C.

©IC MASTER 1978

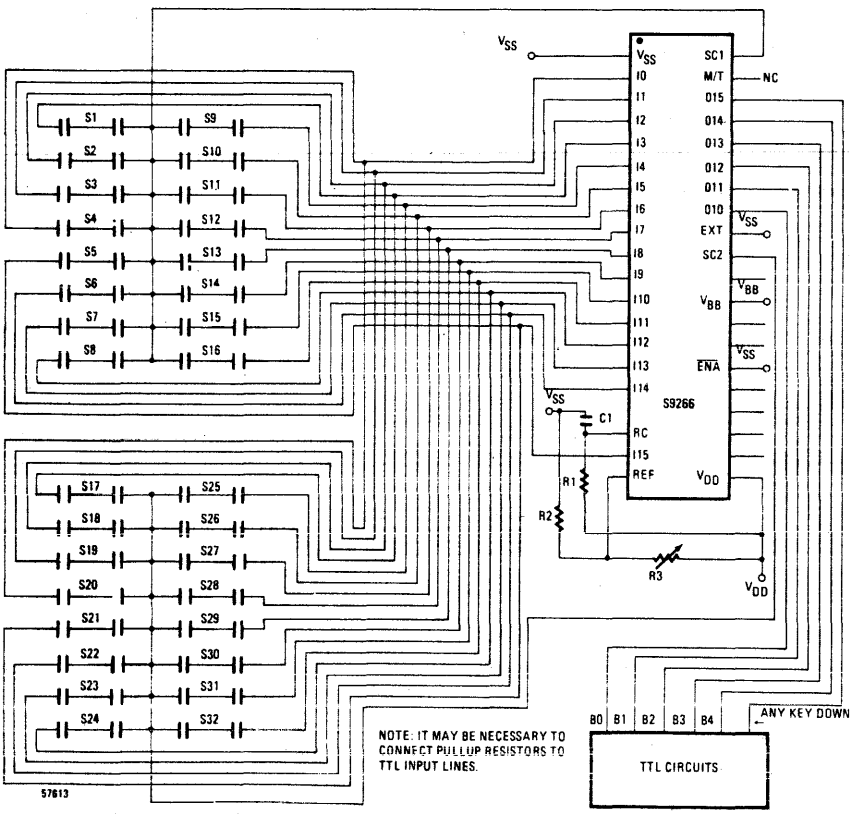
V_{BB} SUPPLY

The sources of all output devices (both "O" and "B" outputs) are common and connected to pin V_{BB}. This allows TTL compatibility as shown in Figure 1, as well as the ability to drive higher level signals. For instance, if V_{SS} = 0 volts, V_{DD} = - 16 volts, and V_{BB} = V_{SS}, then active outputs would drive a load connected to V_{DD} towards V_{SS}.

M/T INPUT

The M/T input pin selects the mode of switch operation, either momentary or toggle. Applying V_{SS} to the M/T pin selects momentary operation in which appropriate outputs are active only for the duration of touching a switch. In this mode, no output is active when no switch is touched. A V_{DD} level applied to M/T causes the circuit to operate in the toggle mode for "push-on, push-off" operation. Subsequent activation of the switch will toggle the corresponding output on and off alternately. It should be noted that each input should be cleared to the off state before selecting a new input to obtain meaningful data from the binary outputs. To reset all outputs when the toggle mode is selected, a pulse of V_{SS} level may be applied to the M/T input.

SC1 and SC2 OUTPUTS



The S9262 and S9266 have multiplexed inputs, using 2 x 7 and 2 x 16 matrices, respectively, to provide 14 and 32 input states. Clock signals SC1 and SC2 are used along with the "I" inputs to form these matrices as connected in the schematic of Figure 1.

O OUTPUTS

Each output pin labeled "O" corresponds to an input pin labeled "I". Whenever an input is selected, the output becomes active and will drive an external load toward supply voltage V_{BB}. This is true for momentary operation only; toggle operation is described in the section labeled "M/T input." When "O" outputs are not active, they are high impedance open drain.

B AND AK OUTPUTS

The S9262 has four and the S9266 has five outputs labeled "B." These supply a binary code relating to the state of the inputs. Fourteen unique states are available on S9262 and thirty-two on S9266. The output configuration is identical to the "O" outputs. An extra output labeled AK is available on the S9266 and is active whenever any key is selected.

TYPICAL VALUES:
R1 = 100KΩ V_{SS} = +5 volts
R2 = 30KΩ V_{SS} = 0 volts
R3 = 91KΩ V_{SS} = -12 volts
C1 = 220 pF

OPERATION

Device operation can be understood by referring to Figure 1, depicting a typical application of the S9266. Each of the 32 pairs of series capacitors labeled S1 – S32 is one touch switch located on a TouchControl panel constructed of glass, printed circuit board, epoxy, or other dielectric material. (For details on touch panel configuration and operation, see the TouchControl application note included in this APD.) In each capacitor pair, the two common plates represent the conductive area on the control panel surface that is to be touched. The other two plates are formed by two conductive surfaces parallel to the touched surface and located directly under it on the reverse side of the panel. Referring again to Figure 1, the S9266 generates a clock signal on output SC1 and a similar signal on output SC2. The SC1 clock output is connected to the common conductors of 16 of the 32 touch switches; the SC2 clock connects to the remaining 16 switches. For each touch switch the clock signal passes through the two series capacitors and is detected in the MOS circuit. When a panel switch surface is touched, the signal level into the chip diminishes, and the on-chip differential amplifier senses the change and performs the appropriate switching function.

I INPUTS

Inputs from the touch switch pads to the TouchControl circuit are labeled I0 through I15 (S9266), or I0 through I6 (S9262). The I inputs in conjunction with SC1 and SC2 outputs form a touch switch matrix of 2 x 16 or 2 x 7, respectively. In both these parts the outputs are binary coded and will be described later.

RC INPUT

A resistor connected to V_{DD} and a capacitor connected to V_{SS} are connected to the RC input pin to establish the on-chip clock frequency that controls the rate of multiplexing and the touch switch delay time. Nominal values for these components are suggested in Figure 1, but they may be varied to change clock frequency over a range of 50kHz to 100 kHz.

REF INPUT

In order to allow flexibility in the choice of TouchControl panel materials, switch layout, and switch size, AMI TouchControl inputs have been designed to detect a differential change rather than an absolute change in level. To obtain a reference level, two resistors are connected to input REF, one connected to input REF, one connected to V_{SS} and the other to V_{DD}.

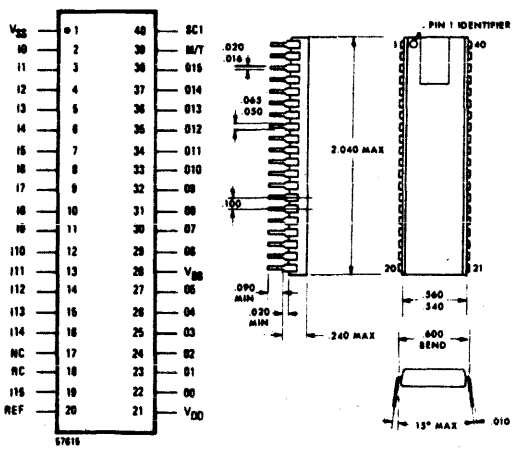
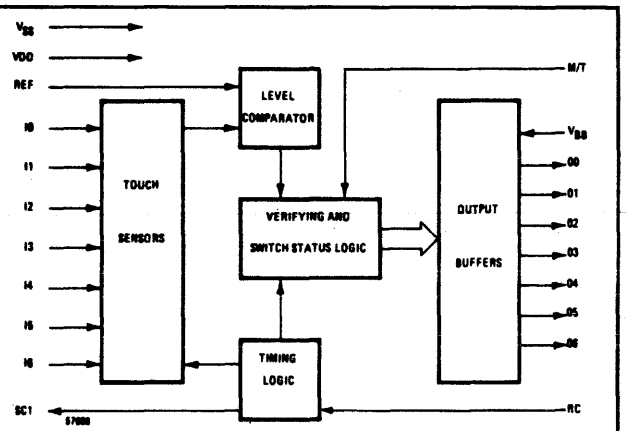
S9263/S9264/S9265
TouchControl™ Interface



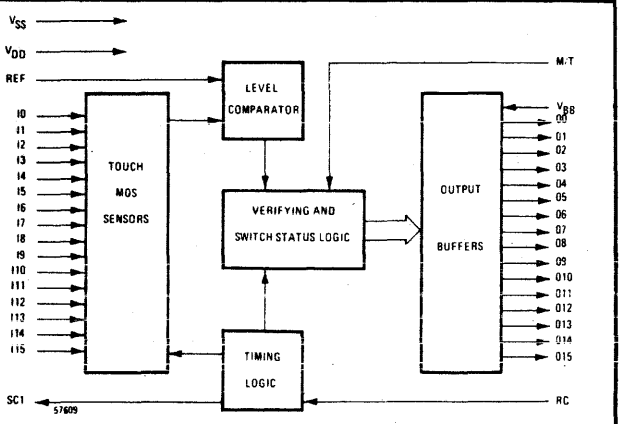
Features

- Interfaces with up to 16 Touch Switches
- Eliminates Contact Noise
- Comparator Sensing Permits Use with Wide Variety of Touch Switch Configurations
- Momentary or Toggle Operation Electrically Selectable
- Outputs are TTL/CMOS/MOS Compatible
- Simplifies Design of Touch-Sensitive Switches

ADVANCED PRODUCT DESCRIPTION



PIN/PACKAGE CONFIGURATION
S9260/S9261



PIN/PACKAGE CONFIGURATION
S9263/S9264/S9265

General Description

These TouchControl interface circuits can be connected to either seven (S9260/S9261) or sixteen (S9263/S9264/S9265) touch switches. For each switch input, there is a corresponding separate output. The outputs are open drain with their sources connected in common to supply input V_{BB}. This permits the driving of TTL as well as MOS circuits, by varying the V_{BB} voltage. The M/T input controls operation of the outputs. In the momentary mode (M) output is active only while the touch switch is being activated (touched by the operator). In the toggle mode (T), alternate actuations of a touch switch will cause its associated output to latch either on or off. On the S9260 and S9263, the M/T input affects all outputs. On the S9261, S9264, and S9265, several switch inputs are permanently fixed in the momentary mode, thus allowing both momentary and toggle switch actuation to be implemented simultaneously.

OPERATION

Device operation can be understood by referring to Figure 1, depicting a typical application of the S9263. Each of the sixteen pairs of series capacitors labeled S1 – S16 is one touch switch located on a TouchControl panel. (For details on touch panel configuration and operation, see the TouchControl application note included in this APD.) In each capacitor pair, the two common plates represent the conductive area on the control panel surface that is to be touched. The other two plates are formed by two conductive surfaces parallel to the touched surface and located directly under it on the reverse side of the panel. Referring again to Figure 1, the S9263 generates a clock signal on output SC1 that is applied to one plate of each capacitor pair; this signal passes through the two series capacitors and is detected in the MOS circuit. When a panel switch surface is touched, the signal level into the chip dimishes, and the on-chip differential amplifier senses the change and performs the appropriate switching function. For example, if surface S1 is touched, the signal at input 13 decreases, and output 03, normally open, now becomes active and drives the S1 input to the TTL circuitry toward voltage level V_{BB}.

I INPUTS

Inputs from the touch switch pads to the TouchControl circuit are labeled I0 through I15 (S9263, S9264, and S9265) or I0 through I6 (S9260 and S9261). Each I input relates directly to an O output of identical numeral.

RC INPUT

A resistor connected to V_{DD} and a capacitor connected to V_{SS} are connected to the RC input pin to establish the on-chip clock frequency that controls the touch switch delay time. Nominal values for these components are suggested in Figure 1, but they may be varied to change clock frequency over a range of 50 kHz to 100 kHz.

REF INPUT

In order to allow flexibility in the choice of TouchControl panel materials, switch layout, and switch size, AMI Touch Control inputs have been designed to detect a differential change rather than an absolute change in level. To obtain a reference level, two resistors are connected to input REF, one to V_{SS} and the other to V_{DD}.

Universal Synchronous Receiver/Transmitter (USRT)

BLOCK DIAGRAM

PIN/PACKAGE CONFIGURATION

FEATURES

- 500 KHz Data Rates
- Internal Sync Detection
- Fill Character Register
- Double Buffered Input/Output
- Bus Oriented Outputs
- 5–8 Bit Characters
- Odd/Even or No Parity
- Error Status Flags
- Single Power Supply (+5v)
- Input/Output TTL Compatible

FUNCTIONAL DESCRIPTION

The S2350 Universal Synchronous Receiver Transmitter (USRT) is a single chip MOS/LSI device that totally replaces the serial to parallel and parallel to serial conversion logic required to interface a word parallel controller or data terminal to a bit-serial, synchronous communication network.

The USRT consists of separate receiver and transmitter sections with independent clocks, data lines and status. Common with the transmitter and receiver are word length and parity mode. Data is transmitted and received in a NRZ format at a rate equal to the respective input clock frequency.

Data messages are transmitted as a contiguous character stream, bit synchronous with respect to a clock and character synchronous with respect to framing or "sync" characters initializing each message. The USRT receiver compares the contents of the internal Receiver Sync Register with the incoming data stream in a bit transparent mode. When a compare is made, the receiver becomes character synchronous formatting a 5, 6, 7, or 8 bit character for output each character time. The receiver has an output buffer register allowing a full character time to transfer the data out. The receiver status outputs indicate received data available (RDA), receiver overrun (ROR), receive parity error (RPE) and sync character received (SCR). Status bits are available on individual output lines and can also be multiplexed onto the output data lines for bus organized systems. The data lines have tri-state outputs.

The USRT transmitter outputs 5, 6, 7, or 8 bit characters with correct parity at the transmitter serial output (TSO). The transmitter is buffered to allow a full character time to respond to a transmitter buffer empty (TBMT) request for data. Data is transmitted in a NRZ format changing on the positive transition of the transmitter clock (TCP). The character in the transmitter fill register is inserted into the data message if a data character is not loaded into the transmitter after a TBMT request.

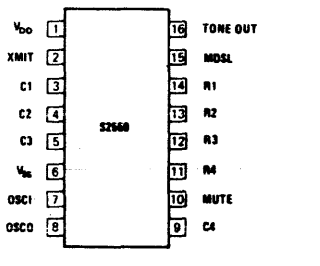
Two-of-Eight Digital Tone Generator

FEATURES



- Wide Operating Supply Voltage Range: 3.5 to 13 Volts.
- Low Power CMOS Circuitry Allows Device Power to be Derived Directly From the Telephone Lines or from Small Batteries, e.g., 9V.
- Uses TV Crystal Standard (3.58 MHz) to Derive All Frequencies Thus Providing Very High Accuracy and Stability.
- Mute and Transmitter Drivers On Chip.
- Interfaces Directly to a Standard Telephone Push-Button Keyboard.
- Digitally Synthesized Sine Wave for Individual Tones. The Harmonic Distortion is Well Below Industry Specification.
- On Chip Generation of a Reference Voltage to Assure Amplitude Stability of the Dual Tones Over the Operating Voltage and Temperature Range.
- Dual Tone as Well as Single Tone Capability.

TEST CIRCUIT FOR MEASUREMENTS OF AMPLITUDE/LOOP CURRENT AND DISTORTION

©IC MASTER 1978

Key Pulser

Features

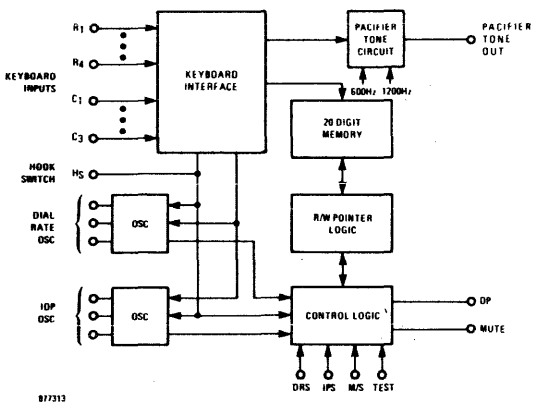
- ☐ Low Voltage CMOS Process for Direct Operation From Telephone Lines
- ☐ Inexpensive R-C Oscillator Design Provides Better than ±3% Accuracy Over Supply Voltage, Temperature and Unit to Unit Variations
- ☐ Dialing Rate Can Be Varied By Changing the Dial Rate Oscillator Frequency
- ☐ Dial Rate Select Input Allows Changing of the Dialing Rate by a 2:1 Factor Without the Need of Changing Oscillator Components
- ☐ Two Selections of Mark/Space Ratios (33-1/3 /66-2/3 or 40/60)
- ☐ Twenty Digit Memory for Input Buffering and for Redial With Access Pause Capability
- ☐ Mute and Dial Pulse Drivers on Chip
- ☐ Accepts Standard Telephone DPCT Keypad or SPST Switch X-Y Matrix Keyboard Arranged in a 2 of 7 Format; Also Capable of Logic Interface
- ☐ Ignores Multi Key Entries

General Description

The S2560 Key Pulser is a CMOS integrated circuit that converts pushbutton inputs to a series of pulses suitable for telephone dialing. It is intended as a replacement for the mechanical telephone dial and can operate directly from the telephone lines with minimum interface. Storage is provided for 20 digits, therefore, the last dialed number is available for redial until a new number is entered.

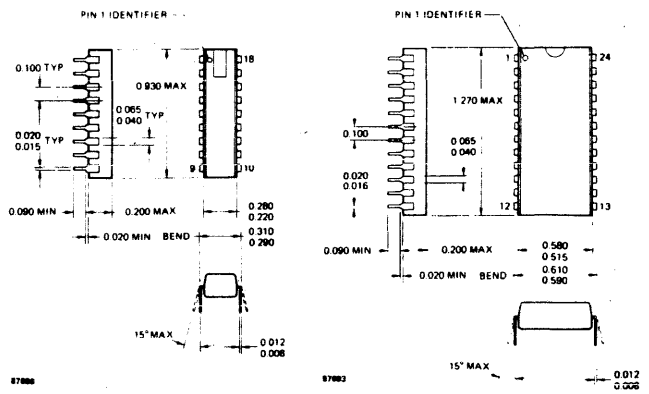
Unique Features of S2560A (18 Pin Package)

IDP scaled to the dialing rate such as to produce smaller IDP at higher dialing rates. Additionally, the IDP can be changed by a 2:1 factor at a given dialing rate by means of the IDP select input.



Unique Features of S2560B (24 Pin Package)

Separate IDP oscillator for selecting an IDP independent of the dialing rate. Provision for changing of the IDP by a 2:1 factor without the need of changing external components.



Alternating pacifier tone output simulates dual tone effects coincident with each keyboard number entry.

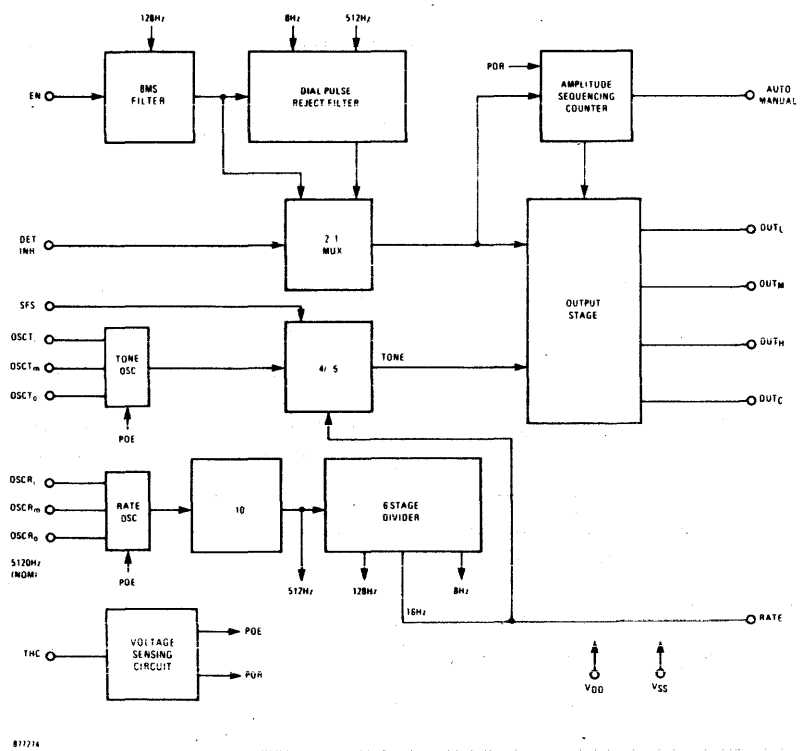
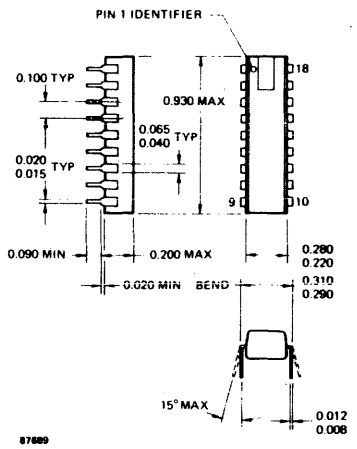
Tone Ringer

Features



- ☐ CMOS Process for Low Power Operation
- ☐ Operates Directly from Telephone Lines with Simple Interface
- ☐ Also Capable of Logic Interface for Non-Telephone Applications
- ☐ Provides a Tone Signal that Shifts Between Two Predetermined Frequencies at Approximately 16Hz to Closely Simulate the Effects of the Telephone Bell
- ☐ Push-Pull Output Stage Allows Direct Drive, Eliminating Capacitive Coupling and Provides Increased Power Output
- ☐ 50mW Output Drive Capability at 10V Operating Voltage
- ☐ Auto Mode Allows Amplitude Sequencing such that the Tone Amplitude Increases in Each of the First Three Rings and Thereafter Continues at the Maximum Level
- ☐ Single Frequency Tone Capability

General Description



The S2561 Tone Ringer is a CMOS integrated circuit that is intended as a replacement for the mechanical telephone bell. It can be powered directly from the telephone lines with minimum interface and can drive a speaker to produce sound effects closely simulating the telephone bell.

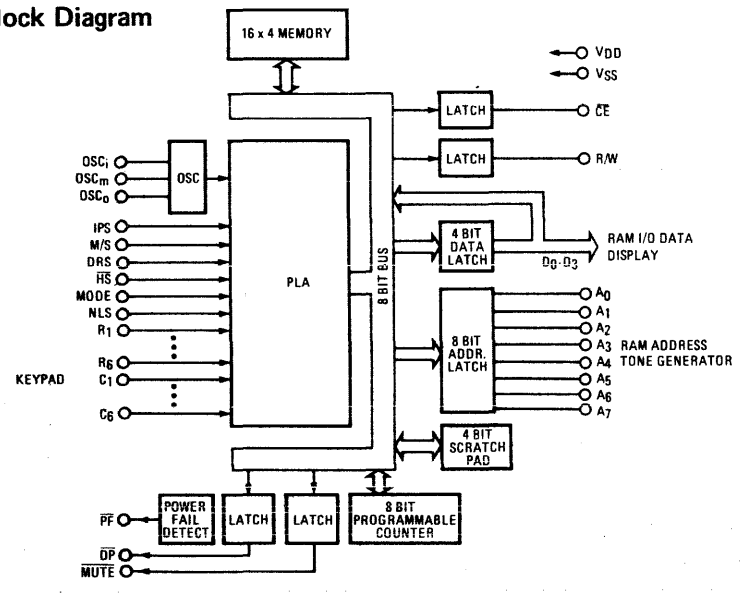
Repertory Dialer

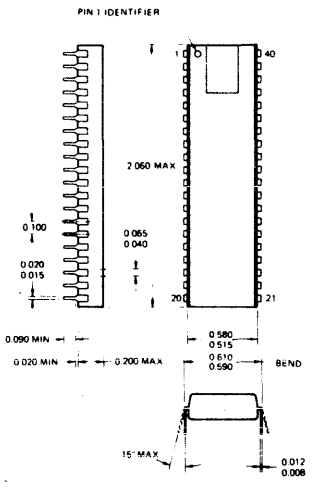
Features



- ☐ CMOS Process Achieves Low Power Operation
- ☐ 8 or 16 Digit Number Capability (Pin Programmable)
- ☐ Dial Pulse and Mute Output
- ☐ Tone Outputs Obtained by Interfacing with Standard AMI S2559 Tone Generator
- ☐ Two Selections of Dial Pulse Rate
- ☐ Two Selections of Inter-Digit Pause
- ☐ Two Selections of Mark/Space Ratio (33-1/3 / 66-2/3 or 40/60)
- ☐ Memory Storage of 32 8-Digit Numbers or 16 16-Digit Numbers with Standard AMI S5101 RAM
- ☐ 16-Digit Memory for Input Buffering and for Redial with Access Pause Capability
- ☐ Accepts the Standard Telephone DPCT Keypad or SPST Switch X-Y Matrix Keyboards; Also Capable of Logic Interface
- ☐ Ignores Multi Key Entries
- ☐ Inexpensive, but Accurate R-C Oscillator Design Provides Better Than ±3% Accuracy Over Supply Voltage, Temperature and Unit-Unit Variations and Allows Different Dialing Rates, IDP and Tone Drive Timing by Changing the Time Base
- ☐ Power Fail Detection
- ☐ BCD Output with Update for Number Display Applications

General Description

The S2562 Repertory Dialer is a CMOS integrated circuit that can perform storing or retrieving, normal dialing, redialing or auto dialing and displaying of one of several telephone numbers. It is intended to be used with the AMI standard S5101—256x4 RAM that functions as telephone number storage. With one S5101 up to 32 8-digit or 16 16-digit numbers can be stored. It can provide either dial pulses or DTMF tones with the addition of the AMI S2559 tone generator for either the dial or tone line applications.



Data subject to change at any time without notice. These sheets transferred for information only.

Functional Description

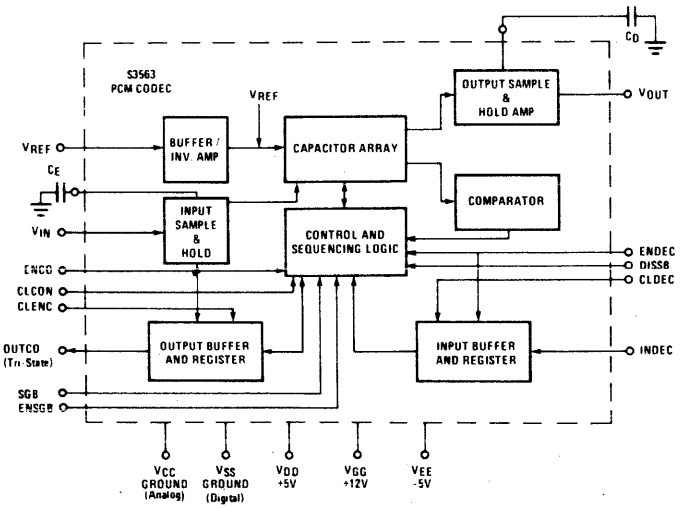
The S2562 is a CMOS controller designed for storing or retrieving, normal dialing, redialing or auto dialing and displaying of one of several telephone numbers. It is intended to be used with the AMI standard S5101 256x4 RAM that functions as a telephone number storage. A single S5101 RAM will store up to 32 8-digit or 16 16-digit telephone numbers. The S2562 can be programmed to work with either 8-digit or 16-digit numbers by means of the Number Length Select (NLS) input.

The S2562 uses an inexpensive, but accurate R-C oscillator as a time base from which the dialing rate and inter-digit pause duration (IDP) are derived. Different dialing rates and IDP durations can be implemented by simply adjusting the oscillator frequency. The dialing rate and IDP can be further changed by a 2:1 factor by means of the dialing rate select (DRS) and inter-digit pause select (IPS) inputs. Thus, for the oscillator frequency of 8kHz, dialing rates of 10 and 20 pps and IDP's of 400 and 800ms can be achieved. The mark/space ratio is fixed independent of the time base and can be selected to be either 33-1/3 / 66-2/3 or 40/60 by means of M/S input. Over supply voltage (5V ±10%), operating temperature range and unit-unit variations, timing accuracy of ±3% can be achieved. A mute output is also available for muting of the receiver during dial pulsing.

Typical Application of the S2562

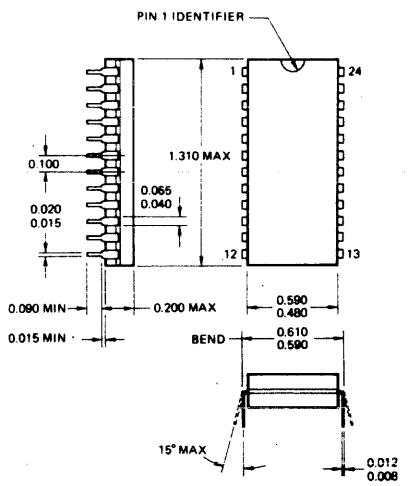
Single Channel PCM CODEC

Features



- ☐ Complete μ-Law (A-Law Option) PCM Encoder and Decoder on a Single Chip
- ☐ Time Shared Capacitor Array for Encode/Decode Functions
- ☐ Full Duplex Encode/Decode Operation Due to Input Sample and Hold Technique
- ☐ 8-Bit Companded Output for the Encoder and Full Duty Cycle PAM Sample Output for the Decoder
- ☐ Signal to Distortion Ratio Better than 22dB for Voice Signals at $-45dBV_r$
- ☐ Single Positive Polarity Reference Input
- ☐ Facility to Insert Signaling Bit in the Encoded Bit Stream
- ☐ Facility to Decode Signaling Bit Plus 7-Bit or 8-Bit PCM Word into a PAM Sample
- ☐ Reduced Power Dissipation in Non-Converting State
- ☐ Fast Conversion Time ($<30\mu s$ at 1MHz Rate)

General Description



The S2563 PCM CODEC is an LSI circuit that encodes voice signals to a serial PCM data output and decodes PCM data input into analog samples representing the original voice signal. It is designed to meet the D3 channel bank specification for the implementation of a 24 channel μ-law system. A-law option is also available for the implementation of the 30/32 (CCITT) European system.

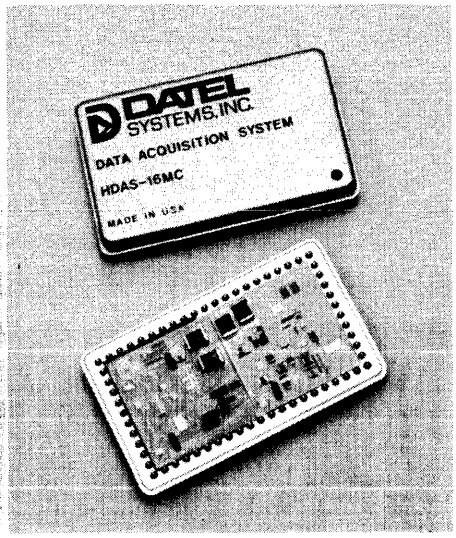
Functional Description

The Single Channel PCM CODEC (S2563) is designed to meet the D3 channel bank specification for the implementation of a 24 channel μ-law system. A-law option is available for implementation of the 30/32 channel European system. The S2563 features time shared encode and decode circuitry. The encoding of the analog voltage sample into an 8-bit companded digital output and the decoding of an 8-bit companded digital input into an analog voltage sample is based on the charge-redistribution technique using a capacitor array. Even though the same capacitor array is employed for the encode and decode functions, full duplex performance can be achieved due to the use of a sample and hold circuit on the input analog voltage. The decode time is significantly shorter (less than 3μs) than the encode time (24μs); hence, if a decode request occurs on the ENDEC input while encoding operation is under way, it is interrupted and the decoding operation started. At the end of the decode operation, control is transferred back to the encode operation. There is no loss of information because the original analog sample is preserved by the hold circuit during the decode operation. Thus, a full duplex performance can be effectively achieved.

A single reference voltage of positive polarity (typically 2.5V) is required at the V_{REF} input. This input is internally buffered so that a single external reference circuit output may be bused to additional CODEC circuits. A negative voltage reference is derived internally from the positive reference by use of a unity gain inverting amplifier when it is determined that the polarity of the input voltage is negative. Otherwise this amplifier is used as a unity gain non-inverting buffer. The input analog voltage is applied at the V_{IN} terminal. Peak-to-peak amplitude of V_{IN} should be less than or equal to $2V_{REF}$. It is assumed that the input analog signal will be capacitively coupled into the V_{IN} terminal. The V_{IN} terminal will present a high input impedance. A continuous clock signal at nominal 1.544MHz frequency should be supplied at CLENC terminal. By making ENCO line "high," an 8-bit companded PCM word can be read out serially at the CLENC clock rate out of the encoder output buffer. The ENCO line must go "low" after 8 clock cycles of CLENC. The repetition rate of the ENCO determines the rate at which the analog input voltage will be sampled and encoded and therefore must be pulsed at the 8KHz rate.



For every positive transition of the ENCO line, the old PCM data word is shifted out of the output buffer while a new analog sample is acquired simultaneously. Facility is provided for inserting the signaling bit in the encoded bit stream. When the ENSGB line is high, the data on the SGB line is substituted for the LSB of the PCM word. The decoder accepts a companded 8-bit PCM word serially at the INDEC terminal at the clock rate supplied at the CLDEC terminal when the ENDEC line is made "high." The ENDEC line must go "low" after 8 clock cycles of CLDEC. ENCO, CLENC, OUTCO, SGB, ENSGB, ENDEC, CLDEC, CLCON, and INDEC signals are TTL compatible. The OUTCO signal is a three-state output and is active when ENCO is "high." The received PCM word is decoded by the capacitor array and presented to the output sample and hold amplifier. The sample and hold amplifier holds the output voltage until a new PCM word is received. The output voltage will therefore be updated coincident with a positive transition on the ENDEC line, i.e., at the desired 8KHz rate. Facility is provided to discard the LSB of the received PCM word when DISSB line is "high" and only the most significant 7 bits are used to decode the PCM word with the LSB set to zero. When DISSB is "low" all 8 bits of the PCM word are used.

HDAS-8, HDAS-16

12 BIT HYBRID DATA ACQUISITION SYSTEMS

FEATURES

- **12 Bit Resolution**
- **8 or 16 Channels**
- **Internal Instrumentation Amp**
- **50 kHz Throughput Rate**
- **Three State Outputs**

The HDAS-8, with 8 differential input channels, and the HDAS-16, with 16 single ended input channels, are industry's first complete 12 bit data acquisition systems in a single hybrid package. Acquisition and conversion times combined are 20μsec. maximum, giving a 50 kHz throughput rate. The 12 bit output data can be transferred out in three 4 bit bytes by means of three state data bus drivers. Output coding is straight binary for unipolar operation and offset binary for bipolar operation.

The HDAS circuitry includes an analog multiplexer, programmable gain instrumentation amplifier, sample-bold circuit with MOS hold capacitor, 10 volt buffered reference, 12 bit A/D converter, three state bus driver and digital control circuitry. The instrumentation amplifier can be programmed by a single external resistor for gains from 1 to 1000. This is an important feature for processing signals in the range of 10mV to 10 V full scale.

The internal sample-hold device has excellent characteristics and has its own self contained MOS hold capacitor. Aperture delay time is 50nsec. and hold mode droop is 1μV/μsec. Nonlinearity error is less than ½ LSB and total error is 1 LSB maximum at 50 kHz throughput rate.

The HDAS units are especially useful for microcomputer based measurement and control systems. The package is a miniature 2.3 × 1.4 × 0.24 inches

ADC-HC12B

12 BIT, LOW POWER A/D CONVERTER

FEATURES

- **Single Supply Operation**
- **CMOS Circuitry**
- **12 Bit Resolution**
- **6 Input Voltage Ranges**
- **26 mW Consumption at 1000 Conversions/Sec.**

The ADC-HC12B is a complete, low power, 12 bit A/D converter utilizing CMOS circuitry. It is specifically designed for portable and remote instrumentation applications where low power consumption is essential; this unit operates from either a single +9 VDC to +15 VDC power source (interrupt mode) or from a dual ±9 VDC to ±15 VDC source (continuous mode). In the interrupt mode of operation the converter is initially in standby mode, drawing only 10 μA of current from the supply until a start convert pulse is applied to it. With the pulse applied the converter turns on, stabilizes, and then performs a 12 bit conversion and returns to the standby mode while the 12 bit data word is held at the output.

Power consumption is 112 milliwatts in the continuous mode and 26 milliwatts in the interrupt mode at 1,000 conversions per second. There are six different analog input voltage ranges.

SPECIFICATIONS, Typical at 25°C

	ADC-HC12B
Resolution	12 Bits
Conversion Time, continuous mode	305 μsec. max.
Conversion Time, interrupt mode	350 μsec. max.
Gain Tempco, max.	30 ppm/°C
Nonlinearity Error, max.	½ LSB
Differential Nonlinearity, max.	½ LSB
Differential Nonlinearity Tempco	2 ppm/°C of FSR
No Missing Codes	Over Op. Temp. Range
Power Supply Sensitivity	0.003%/%
Analog Input Ranges	0 to +5 V, +10 V, +20 V ±2.5 V, ±5 V, ±10 V
Input Impedance	5K, 10K, or 20K
Output Logic	CMOS
Unipolar Coding	Straight Binary
Bipolar Coding	Offset Binary Two's Complement
Power Requirement, continuous	±9 V to ±15 V
Power Requirement, interrupt	+9 V to +15 V
Package	32 Pin DIP

ADC-HF12B

12 BIT, ULTRA-FAST A/D CONVERTER

FEATURES

- **12 Bit Resolution**
- **2.0 μsec. Conversion Time**
- **5 Programmable Input Ranges**
- **100 Megohm Buffer Amplifier**
- **Short Cycling Capability**

The ADC-HF12B is an ultra-fast, 12 bit A/D converter manufactured with thin film hybrid technology. Using the successive approximation technique this converter completes a 12 bit conversion in just 2 microseconds. Five different input voltage ranges are available by simple external pin connection. An input buffer amplifier is also provided for applications where 100 megohm input impedance is required.

The ADC-HF12B circuit design uses an ultra-fast DAC with 12 matched current sources; it also contains a fast comparator, precision reference, clock, successive approximation register, and buffer amplifier. A thin film R-2R resistor ladder network is actively laser trimmed for optimum linearity.

Excellent tracking of the DAC current sources results in no missing codes over the operating temperature range.

SPECIFICATIONS, Typical at 25°C

	ADC-HF12B
Resolution	12 Bits
Conversion Time, max.	2 μsec.
Gain Tempco, max.	20 ppm/°C
Nonlinearity Error, max.	½ LSB

ADC-HS12B

12 BIT A/D CONVERTER WITH SAMPLE HOLD

FEATURES

- **Internal Sample-Hold**
- **6 μsec. Acquisition Time**
- **8 μsec. Conversion Time**
- **12-Bit Resolution**
- **Programmable Input Ranges**

The ADC-HS12B is a high performance 12 bit A/D converter combined with a sample-hold in a miniature 32 pin package. It is specifically designed for systems applications where the sample-hold is an integral part of the conversion process. The sample hold has a 6 μsec. acquisition time and the A/D converter has an 8 μsec. conversion time. Five input voltage ranges are programmable by external pin connection. The input impedance to the sample-hold is 100 megohms, permitting direct connection to an analog multiplexer.

This converter incorporates proven thin film hybrid technology used in high volume production. The thin film resistor network is fabricated of nichrome on glass and then actively laser trimmed for best linearity. Other features include 20 ppm/°C gain tempco, 2 ppm/°C differential nonlinearity tempco and no missing codes over the operating temperature range.

SPECIFICATIONS, Typical at 25°C

ADC-HX12B

12 BIT, LOW COST A/D CONVERTER

FEATURES

- **12 Bit Resolution**
- **20 μsec. Conversion Time**
- **5 Programmable Ranges**
- **100 Megohm Buffer**
- **Lowest Cost**

The ADC-HX12B is a very low cost, 12 bit A/D converter which is functionally complete. It is fabricated with thin film hybrid technology to perform a conversion in 20 μsec. By means of external pin connections it can be programmed for 5 different input voltage ranges. An internal 100 megohm buffer is provided for high input impedance applications.

The circuit consists of a 12 bit DAC which employs quad current switches, a precision zener reference, a fast comparator, clock, successive approximation register, and buffer amplifier. A nichrome thin film resistor network is actively laser trimmed to achieve optimum linearity.

Output data is available in both parallel and serial forms. This converter can also be short cycled to achieve faster conversions at lower resolutions.

SPECIFICATIONS, Typical at 25°C

	ADC-HX12B
Resolution	12 Bits
Conversion Time, max.	20 μsec.
Gain Tempco, max.	20 ppm/°C
Nonlinearity Error, max.	½ LSB
Differential Nonlinearity, max.	½ LSB
Diff. Nonlinearity Tempco	2 ppm/°C of FSR
No Missing Codes	Over Op. Temp. Range
Power Supply Rejection, max.	0.002%/%
Analog Input Ranges	0 to +5 V, 0 to +10V ±2.5 V, ±5 V, ±10 V
Input Impedance	2.5 K, 5 K or 10 K
Buffer Input Impedance	100 Megohms
Buffer Bias Current	125 nA
Buffer Settling Time	3 μsec.
Unipolar Coding	Complementary Binary
Bipolar Coding	Comp. Offset Binary Comp. 2's Complement
Power Requirement	+15 VDC at 55 mA −15 VDC at 45 mA +5 VDC at 100 mA
Package	32 Pin DIP

ADC-HZ12B

12 BIT, HIGH PERFORMANCE A/D CONVERTER

FEATURES

- **8 μsec. Conversion Time**
- **20 ppm/°C Tempco**
- **5 Programmable Ranges**
- **Short Cycle Capability**
- **100 Megohm Buffer**

The ADC-HZ12B features high conversion speed in a hybrid 12 bit A/D converter. By employing a low capacitance nichrome-on-glass thin film resistor network, a conversion time of only 8 μsec. is achieved. This converter also has 5 different input voltage ranges determined by external pin connection and a 100 megohm buffer which may be connected if desired.

This ADC-HZ12B is functionally complete, incorporating a 12 bit DAC, precision reference, fast comparator, successive approximation register, a clock, and buffer amplifier. The thin film resistor network has excellent tracking characteristics resulting in no missing codes over the operating temperature range. The network is functionally laser trimmed.

Output coding is complementary binary, complementary offset binary, or complementary two's complement. Provision is made for precise, external adjustment of offset and gain.

SPECIFICATIONS, Typical at 25°C

DAC-HA14B
HIGH RESOLUTION, MULTIPLYING CMOS D/A CONVERTER

FEATURES
- **14 Bit Resolution**
- **2 & 4 Quadrant Multiplying**
- **500 nsec. Settling Time**
- **10 ppm/°C Tempco**
- **+5 V or +15 V Power Supply**

The DAC-HA14B is a 14 bit, CMOS multiplying D/A converter. There are two versions, offering a choice of either +5 V or +15 V power supply operation. The +5 V model draws only 10 μA quiescent current while the +15 V model draws 2 mA. The device is packaged in a 20 pin ceramic DIP package.

The combination of low ON resistance CMOS switches and a laser-trimmed nichrome thin film resistor network result in a maximum nonlinearity of ±1 LSB with 14 bit monotonicity at 25°C. The gain temperature coefficient of the circuit is 10 ppm/°C maximum. The resistor network is an R-2R ladder with resistance values of 10K and 20K ohms.

The input resistance to the ladder is 10K ohms for the external reference source, which may be ±10 V. Bandwidth for the reference input is 200 kHz. The DAC-HA14B incorporates internal protection on the power supply and digital input terminals to prevent latch-up problems.

SPECIFICATIONS, Typical at 25°C

DAC-HF SERIES

ULTRA-FAST, CURRENT OUTPUT D/A CONVERTERS

NOTE: FOR DAC-HF10B PINS 11 & 12 ARE NO CONNECTION
FOR DAC-HF8B PINS 9, 10, 11 & 12 ARE NO CONNECTION

FEATURES

- **8, 10, or 12 Bit Resolution**
- **25 nsec. Settling (8 or 10 Bits)**
- **50 nsec. Settling (12 Bits)**
- **Unipolar or Bipolar Operation**
- **10 mA Output Current**

The DAC-HF series features ultra-fast current outputs for 8, 10, and 12 bit resolutions. These state-of-the-art digital to analog converters give output settling times of 25 nanoseconds maximum for 8 and 10 bits and 50 nanoseconds maximum for 12 bits. They can be used to drive a load resistor directly for up to ±1.2 V outputs or with a fast inverting operational amplifier (Datel System's AM-500) for up to ±10 V outputs at sub-microsecond settling times. The required feedback resistors are incorporated inside the unit and give a selection of five different output ranges by external pin connection.

The circuit uses high speed PNP current switches combined with a low impedance R-2R ladder network. The network is fabricated with nichrome thin-film resistors which are then laser trimmed for optimum linearity. The output current is 0 to +10 mA or +5 mA with a 200 ohm output impedance.

DAC-HK SERIES

HIGH PERFORMANCE 12 BIT DAC'S WITH INPUT REGISTER

FEATURES

- **12 Bit Resolution**
- **Input Register**
- **20 ppm/°C Tempco**
- **Binary, BCD, or 2's Comp. Coding**
- **3 μsec. Settling Time**

The DAC-HK series D/A converters are high performance 12-bit devices with a fast settling voltage output. They incorporate a level controlled input storage register and are specifically designed for systems applications such as data-bus interfacing with computers. When the "load" input is high data in the storage register is held, and when the load input is low data is transferred through to the DAC. There are three basic models available by coding option: binary, BCD, and two's complement. The output voltage ranges are externally pin-programmable and include: 0 to +2.5 V, 0 to +5 V, 0 to +10 V, ±2.5 V, ±5 V, and ±10 V.

Quad current switches are combined with a low T.C. thin film resistor network and a low T.C. Zener reference to achieve better than 20 ppm/°C gain tempco. Optimum linearity is attained by functional laser trimming of the thin film nichrome resistors.

DAC-HP16B, DAC-HP16D

HIGH RESOLUTION D/A CONVERTERS

FEATURES

- **16 Bit Binary Model**
- **4 Digit BCD Model**
- **Linearity to 0.003%**
- **15 ppm/°C Tempco, Max.**
- **Voltage Output**

The DAC-HP series are high resolution D/A converters with voltage output. They are self-contained, including a low tempco zener reference circuit and output operational amplifier, all in a miniature 24 pin double spaced ceramic DIP package. There are two basic models in the series. The DAC-HP16B has 16 bit binary resolution with ±0.003% linearity while the DAC-HP16D has 4 digit BCD resolution with ±0.005% linearity. Input coding is complementary binary and complementary offset binary for the DAC-HP16B and complementary BCD for the DAC-HP16D. The binary version operates in both unipolar and bipolar modes with output voltages of 0 to +10 V and ±5 V; the BCD version operates in unipolar mode only with 0 to +10 V output.

The DAC-HP design incorporates thin film hybrid technology which has been in volume production. Selected low tempco nichrome on silicon thin film resistor networks are combined with tightly matched quad current switches to achieve 16 bit resolution.

DAC-HZ12B SERIES

LOW COST, HIGH PERFORMANCE 12 BIT D/A CONVERTERS

FEATURES

- **12 Bits Binary**
- **3 Digits BCD**
- **5 Output Ranges**
- **3 μsec. Settling time**
- **20 ppm/°C Tempco**

The DAC-HZ series are high performance, hybrid 12 bit binary and 3 digit BCD digital-to-analog converters. They are complete and self-contained with a precision internal reference and fast output operational amplifier. Pin programmable output voltage ranges are provided for a high degree of application flexibility; the output voltage ranges are 0 to +5 V, 0 to +10 V, ±2.5 V, ±5 V, and ±10 V with only unipolar ranges available on the BCD models.

The internal design utilizes three quad current switches, two thin film resistor networks, a precision zener reference circuit, reference control circuit and output amplifier. The thin film resistor networks are functionally trimmed with a laser to precisely set the binary weights of the current switches. The excellent tracking of the thin film resistors in conjunction with the tightly matched current switches results in a differential nonlinearity tempco of only 2 ppm/°C.

SHM-IC-1, SHM-LM-2

MONOLITHIC SAMPLE-HOLDS

FEATURES

- **Acquisition Time to 5 μsec.**
- **0.01% Accuracy**
- **Bandwidth to 2 MHz**
- **0.01% Feedthrough**
- **Low Cost**

These monolithic sample-hold devices feature excellent performance specifications at a low price. They are self-contained units requiring only an external hold capacitor for operation. The SHM-LM-2 operates in a fixed gain configuration of +1 while the SHM-IC-1 can be externally connected for gains of ±1 or for higher gains by means of two external resistors. Both models consist of a high impedance input amplifier, a fast electronic switch, and a high impedance output buffer amplifier. The circuit operates in a closed loop configuration for maximum accuracy.

Accuracy is 0.01% for both models making them useful in 12 bit A/D converter applications. For a 1000pF hold capacitor the acquisition time is 5 μsec. for the SHM-IC-1 and 6 μsec. for the SHM-LM-2. Better accuracy with lower feedthrough and hold mode droop can be achieved by using higher value hold capacitance such as .01 μF.

HI-200

Dual SPST CMOS Analog Switch

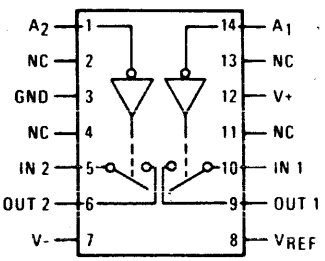
FEATURES

- ANALOG VOLTAGE RANGE ±15V
- ANALOG CURRENT RANGE 80mA
- TURN-ON TIME 240ns
- LOW R_{ON} 55Ω
- LOW POWER DISSIPATION 15mW
- TTL/CMOS COMPATIBLE
- NO DIGITAL INPUT CURRENT SPIKE

APPLICATIONS

- HIGH FREQUENCY ANALOG SWITCHING
- SAMPLE AND HOLD CIRCUITS
- DIGITAL FILTERS
- OP AMP GAIN SWITCHING NETWORKS

DESCRIPTION



HI-200 is a monolithic device comprising two independently selectable SPST switches which feature fast switching speeds (290ns) combined with low power dissipation (15mW at 25°C). Each switch provides low "ON" resistance operation for input signal voltages up to the supply rails and for signal currents up to 80mA. Employing Dielectric Isolation and Complementary CMOS processing, HI-200 operates without any applications problems induced by latch-up or SCR mode phenomena.

All devices provide break-before-make switching and are TTL and CMOS compatible for maximum application versatility. HI-200 is an ideal component for use in high frequency analog switching. Typical applications include signal path switching, sample and hold circuit, digital filters and op amp gain switching networks.

HI-200 is available in D.I.P. (TO-116) and metal (TO-100) cans. HI-200-2 is specified from -55°C to +125°C while HI-200-5 operates from 0°C to +75°C. HI-200 is functionally and pin compatible with other available "200 series" switches.

HI-201

Quad SPST CMOS Analog Switch

FEATURES

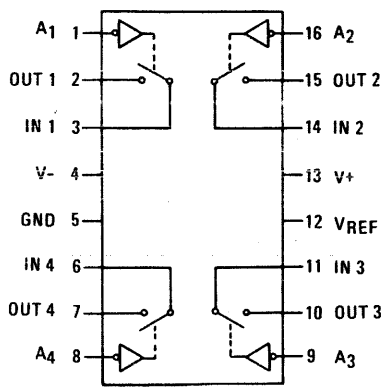
- ANALOG VOLTAGE RANGE ±15V
- ANALOG CURRENT RANGE 80mA
- TURN-ON TIME 185ns
- LOW R_{ON} 65Ω
- LOW POWER DISSIPATION 15mW
- TTL/CMOS COMPATIBLE
- NO DIGITAL INPUT CURRENT SPIKE

APPLICATIONS

- HIGH FREQUENCY ANALOG SWITCHING
- SAMPLE AND HOLD CIRCUITS
- DIGITAL FILTERS
- OP AMP GAIN SWITCHING NETWORKS

DESCRIPTION

HI-201 is a monolithic device comprising four independently selectable SPST switches which feature fast switching speeds (185ns) combined with low power dissipation (15mW at 25°C). Each switch provides low "ON" resistance operation for input signal voltages up to the supply rails and for signal currents up to 80mA. Employing Dielectric Isolation and Complementary CMOS processing, HI-201 operates without any applications problems induced by latch-up or SCR-mode phenomena.



All devices provide break-before-make switching and are TTL and CMOS compatible for maximum application versatility. HI-201 is an ideal component for use in high frequency analog switching. Typical appliations include signal path switching, sample and hold circuit, digital filters and op amp gain switching networks.

HI-201 is available in a 16 lead dual-in-line package. HI-201-2 is specified from -55°C to +125°C while HI-201-5 operates from 0°C to +75°C. HI-201 is functionally and pin compatible with other available "200 series" switches.

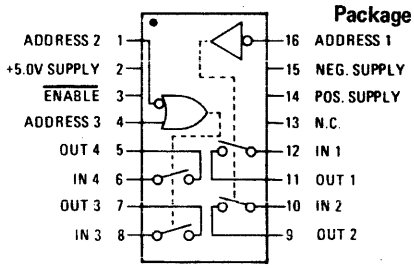
HI-1800A

Low Leakage Dual DPDT Analog Switch

FEATURES

- LEAKAGE AT +125°C (TYP.) 40nA
- SIGNAL RANGE ±15V
- "ON" RESISTANCE (TYP.) 125Ω
- ACCESS TIME (TYP.) 500ns
- DTL/TTL COMPATIBLE ADDRESS
- -55°C TO +125°C OPERATION

APPLICATIONS



- SIGNAL SELECTOR
- CHOPPER
- SAMPLE AND HOLD
- GAIN SWITCHING

DESCRIPTION

The HI-1800A is a general purpose analog switch which may be used as a signal selector, multiplexer, chopper, or cross-point switch for signals from D.C. to R.F. The configuration is two independent DPST switches with versatile TTL compatibile addressing logic which allows connection as two SPDT, or as a single DPDT, SPDT, or SPST switch by connection of external jumpers. ON resistance decreases correspondingly when switching elements are connected in parallel. The HI-1800A is fabricated on a single dielectrically isolated chip using complementary N and P channel MOS devices. This unique process produces exceptionally low leakage currents (even at +125°C), constant ON resistance, low power dissipation, and fast switching. The HI-1800A is available in a hermetic 16 pin dual-in-line package.

CMOS Analog Switches

FEATURES

- WIDE ANALOG SIGNAL RANGE ±15V
- LOW "ON" RESISTANCE (TYP) 25Ω
- HIGH CURRENT CAPABILITY (TYP) 80mA
- BREAK-BEFORE-MAKE SWITCHING
  - TURN-ON TIME (TYP) 370ns
  - TURN-OFF TIME (TYP) 280ns
- NO LATCH-UP
- INPUT MOS GATES ARE PROTECTED FROM ELECTROSTATIS DISCHARGE
- DTL, TTL, CMOS, PMOS COMPATIBLE

APPLICATIONS

- HIGH FREQUENCY SWITCHING
- SAMPLE AND HOLD
- DIGITAL FILTERS
- OP AMP GAIN SWITCHING

DESCRIPTION

This family of CMOS analog switches offers low-resistance switching performance for analog voltages up to the supply rails and for signal currents up to 80mA. "ON" resistance is low and stays reasonably constant over the full range of operating signal voltage and current. R_{ON} remains exceptionally constant for input voltages between +5V and -5V and currents up to 50mA. Switch impedance also changes very little over temperature, particularly between 0°C and +75°C. R_{ON} is nominally 25 ohms for HI-5048 through HI-5051 and HI-5046A/5047A and 50Ω for HI-5040 through HI-5047.

All devices provide break-before-make switching and are TTL and CMOS compatible for maximum application versatility. Performance is further enhanced by Dielectric Isolation processing which insures latch-free operation with very low input and output leakage currents (0.8nA at 25°C). This family of switches also features very low power operation (1.5mW at 25°C).

There are 14 devices in this switch series which are differentiated by type of switch action and value of R_{ON} (see Functional diagram). All devices are available in 16 pin D.I.P. packages. The HI-5040/5050 switches can directly replace IH-5040 series devices and are functionally compatible with the DG 180/190 family. Each switch type is available in the -55°C to +125°C and 0°C to +75°C performance grades.

HI-506/HI-507

Single 16/Differential 8 Channel CMOS Analog Multiplexers

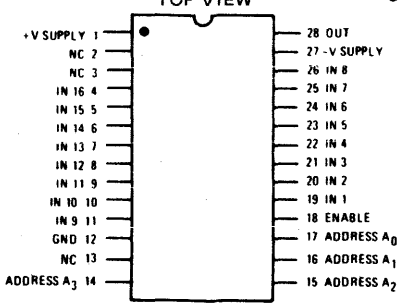
FEATURES

- LOW ON RESISTANCE (TYP.) 170Ω
- WIDE ANALOG SIGNAL RANGE ±15V
- DIRECTLY TTL/CMOS COMPATIBLE 2.4V (LOGIC "1")
- ACCESS TIME (TYP.) 300ns
- HIGH CURRENT CAPABILITY (TYP.) 50mA
- BREAK-BEFORE-MAKE SWITCHING
- NO LATCH-UP

APPLICATIONS

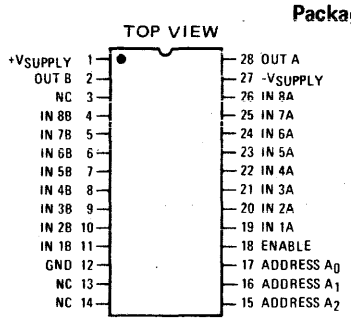
- DATA ACQUISITION SYSTEMS
- PRECISION INSTRUMENTATION
- DEMULTIPLEXING
- SELECTOR SWITCH

DESCRIPTION



The HI-506/507 are monolithic high performance CMOS analog multiplexers offering built-in channel selection decoding plus an inhibit input for disabling all channels. Dielectric Isolation (DI) is used to fabricate these devices for enhanced reliability and performance over conventional Junction-Isolated (JI) devices. (See Application Note 521). Substrate leakages and parasitic capacitance are much lower in DI resulting in extremely low static errors and high throughput rates. Low output leakage (typically 0.3nA) and low channel ON resistance (170Ω) assure optimum performance in low level or current mode applications. Operation is specified with nominal ±15V supplies, however, supplies as low as ±7V can be used at somewhat lower performance. The HI-506/507 internally develops a +5V digital logic reference from the positive supply which eliminates an additional supply and provides direct TTL/CMOS compatibility without interface pull-up resistors.

The HI-506 is a single-ended 16 channel multiplexer while the HI-507 is a differential 8 channel version. Either device is ideally suited for medical instrumentation, telemetry systems and microprocessor based data acquisition systems.



The HI-506-2 and HI-507-2 are specified over -55°C to +125°C, while the -5 versions are specified over 0°C to +75°C.

16 Channel CMOS Analog Multiplexer with Overvoltage Protection

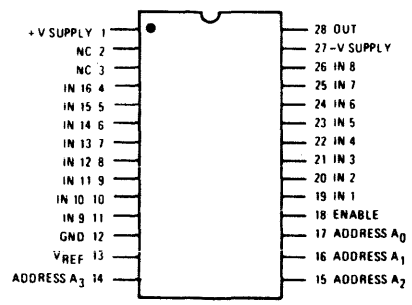
FEATURES

- ANALOG/DIGITAL OVERVOLTAGE PROTECTION
- FAIL SAFE WITH POWER LOSS (NO LATCHUP)
- BREAK-BEFORE-MAKE SWITCHING
- DTL/TTL AND CMOS COMPATIBLE
- ANALOG SIGNAL RANGE ±15V
- ACCESS TIME (TYP.) 500ns
- SUPPLY CURRENT AT 1MHz ADDRESS TOGGLE (TYP.) 4mA
- STANDBY POWER (TYP.) 7.5mW

APPLICATIONS

- DATA ACQUISITION
- INDUSTRIAL CONTROLS
- TELEMETRY

DESCRIPTION



The HI-506A and HI-507A are dielectrically isolated CMOS analog multiplexers incorporating an important feature; they withstand analog input voltages much greater than the supplies. This is essential in any system where the analog inputs originate outside the equipment. They can withstand a continuous input up to 10 volts greater than either supply, which eliminates the possibility of damage when supplies are off, but input signals are present. Equally important, they can withstand brief input transient spikes of several hundred volts; which otherwise would require complex external protection networks. Necessarily, ON resistance is somewhat higher than similar unprotected devices, but very low leakage currents combine to produce low errors. Application Notes 520 and 521 further explain these features.

The HI-506A-2 and HI-507A-2 are specified over -55°C to +125°C while the -5 versions are specified over 0°C to +75°C.

HI-1818A/1828A

Low Resistance 8 Channel CMOS Analog Multiplexers

FEATURES

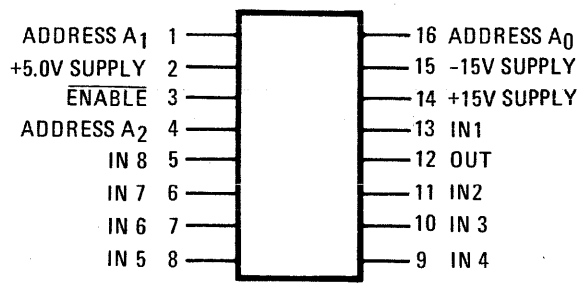
- SIGNAL RANGE ±15V
- "ON" RESISTANCE (TYP.) 250Ω
- INPUT LEAKAGE AT +125°C (TYP.) 20nA
- ACCESS TIME (TYP.) 350ns
- POWER CONSUMPTION (TYP.) 5mW
- DTL/TTL COMPATIBLE ADDRESS
- -55°C to +125°C OPERATION

APPLICATIONS

- DATA ACQUISITION SYSTEMS
- PRECISION INSTRUMENTATION
- DEMULTIPLEXING
- SELECTOR SWITCH

DESCRIPTION

The HI-1818A/1828A are monolithic high performance CMOS analog multiplexers offering built-in channel selection decoding plus an inhibit (enable) input for disabling all channels. Dielectric Isolation (DI) processing is used for enhanced reliability and performance (see Application Note 521). Substrate leakage and parasitic capacitance are much lower, resulting in extremely low static errors and high throughput rates. Low output leakage (typically 0.1nA) and low channel ON resistance (250 Ω) assure optimum performance in low level or current mode applications.



The 1818A is a single-ended 8 channel multiplexer, while the HI-1828A is a differential 8 channel version. Either device is ideally suited for medical instrumentation, telemetry systems, and microprocessor based data acquisition systems.

The HI-1818A-2 and HI-1828A are specified over -55°C to +125°C, while the -5 versions are specified over 0°C to +75°C.

HI-1840

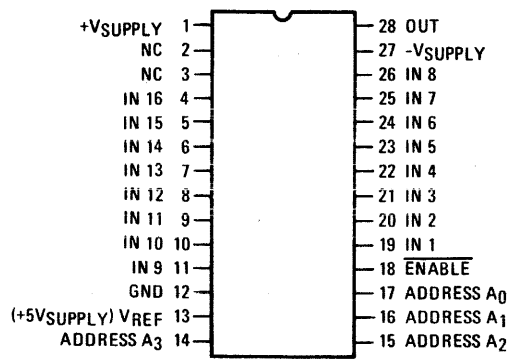
16 Channel CMOS Analog Multiplexer with High-Z Analog Input Protection

FEATURES

- HIGH ANALOG INPUT IMPEDANCE DURING POWER LOSS (OPEN) 500MΩ
- LOW POWER CONSUMPTION (STANDBY) 600μW
- ACCESS TIME 500ns
- EXCELLENT IN HI-REL REDUNDANT SYSTEMS
- BREAK-BEFORE-MAKE SWITCHING
- NO LATCH-UP

APPLICATIONS

- FAIL-SAFE DATA ACQUISITION SYSTEMS
- FAIL-SAFE TELEMETRY SYSTEMS
- AIRCRAFT INSTRUMENTATION AND CONTROL



DESCRIPTION

The HI-1840 is a monolithic 16 channel multiplexer constructed with the Harris Linear Dielectric Isolation CMOS process. It is designed to provide a high input impedance to the analog source if device power fails (open) or the analog signal voltage inadvertently exceeds the supply rails during powered operation. Excellent for use in redundant applications, since the secondary device can be operated in a standby unpowered mode affording no additional power drain. But more significantly, a very high impedance exists between the active and inactive devices preventing any interaction. One of sixteen channel selection is controlled by a 4-bit binary address plus an Enable-Inhibit input which conveniently controls the ON/OFF operation of several multiplexers in a system. All digital inputs have electrostatic discharge protection. The HI-1840 is tested and guaranteed within the military temperature range and is available in a 28 pin dual-in-line package.

PRELIMINARY HI-562

12 Bit High Speed Monolithic Digital-to-Analog Converter

FEATURES

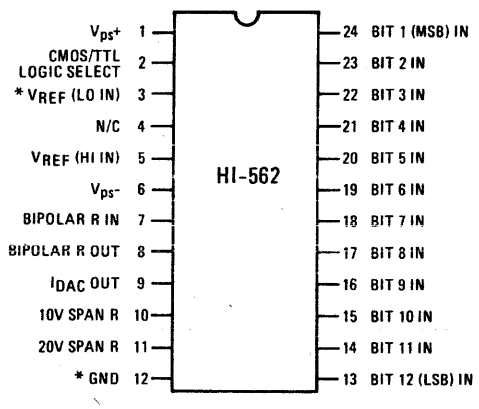
- MONOLITHIC CONSTRUCTION
- EXTREMELY FAST SETTLING — 200ns TO 0.01% (TYP.)
- LOW GAIN DRIFT — ±2ppm/°C (MAX.)
- EXCELLENT LINEARITY OVER TEMPERATURE — ±1/2 LSB (MAX.)
- DESIGNED FOR MINIMUM GLITCHES
- MONOTONIC OVER TEMPERATURE

APPLICATIONS

- CRT DISPLAY GENERATION
- HIGH SPEED A/D CONVERTERS
- VIDEO SIGNAL RECONSTRUCTION
- WAVEFORM SYNTHESIZERS
- HIGH SPEED DATA ACQUISITION
- HIGH-REL APPLICATIONS
- PRECISION INSTRUMENTS

DESCRIPTION

The Harris HI-562 is the first monolithic digital-to-analog converter to combine both ultra-high speed performance and true 12-bit accuracy on the same chip. The HI-562's fast output current settling of 200ns to 0.01% is achieved using dielectric isolation processing to reduce internal parasitics for fast rise and fall times during switching. Output glitches are minimized in the HI-562 by incorporating equally weighted current sources switched into an R-2R ladder network for symmetrical turn-ON and turn-OFF switching times. This creates within the chip a very uniform and constant thermal distribution for excellent linearity and also completely eliminates thermal transients during switching. High stability thin film resistor processing together with laser trimming provide the HI-562 with guaranteed true 12-bit linearity to within ±1/2 LSB maximum over the -55°C to +125°C temperature range. Beyond that, the HI-562's low offset and gain drift over this temperature range assure that its absolute accuracy when referred to a fixed 10V reference will not deviate more than ±3/2 LSB for unipolar mode operation (±2 LSB for bipolar operation). The input reference can be varied from +2V to +10V for two quadrant multiplying mode operation.



The HI-562 is recommended as a replacement for higher cost hybrid and modular units for increased reliability and accuracy in applications such as CRT displays, precision instruments and data acquisition systems requiring throughput rates as high as 5MHz for full range transitions. Its small size makes it an ideal choice as the heart of high speed A/D converter designs or as a building block in high speed or high resolution industrial process control systems. The HI-562 is also ideally suited for aircraft and space instrumentation where operation over a wide temperature range is required.

The HI-562-5 is specified for operation over 0°C to +70°C, the HI-562-4 over -25°C to +85°C and the HI-562-2 and HI-562-8 over -55°C to +125°C. Processing to MIL-STD-883A Class B screening is available by selecting the HI-562-8. All are available in a hermetically sealed 24-lead dual-in-line package.

NOTES

1. Absolute maximum ratings are limiting values, applied individually, beyond which the serviceability of the circuit may be impaired. Functional operation under any of these conditions is not necessarily implied.
2. V_{ps}+ tolerance is ±10% for HI-562-2, -8. and ±5% for HI-562-4, -5.
3. See Definitions.
4. FSR is "full scale range" and is 20V for ±10V range, 10V for ±5V range, etc.; or 5mA(±20%) for current output.
5. After 30 seconds warm-up.
6. Using an external op amp with internal span resistors and specified external trim resistors in place of potentiometers R_1 and R_2. Errors are adjustable to zero using R_1 and R_2 potentiometers. (See Operating Instructions Figure 2.)
7. Maximum V_{ps}+ is +12V for high level logic only, i.e. when pin 1 is tied to pin 2.

DEFINITIONS OF SPECIFICATIONS

DIGITAL INPUTS

The HI-562 accepts digital input codes in binary format and may be user connected for any one of three binary codes. Straight Binary, Two's Complement, or Offset Binary, (See Operating Instructions).

DIGITAL INPUT	ANALOG OUTPUT		
	Straight Binary	Offset Binary	Two's Complement*
MSB LSB			
000...000	Zero	-FS (Full Scale)	Zero
100...000	½FS	Zero	-FS
111...111	+FS – 1 LSB	+FS – 1 LSB	½FS – 1 LSB
011...111	½FS – 1 LSB	Zero – 1 LSB	+FS – 1 LSB

*Invert MSB with external inverter to obtain Two's Complement Coding

ACCURACY

NONLINEARITY – Nonlinearity of a D/A converter is an important measure of its accuracy. It describes the deviation from an ideal straight line transfer curve drawn between zero (all bits OFF) and full scale (all bits ON).

DIFFERENTIAL NONLINEARITY – For a D/A converter, it is the difference between the actual output voltage change and the ideal (1 LSB) voltage change for a one bit change in code. A Differential Nonlinearity of ±1 LSB or less guarantees monotonictiy; i.e., the output always increases and never decreases for an increasing input.

SETTLING TIME

Settling time is the time required for the output to settle to within the specified error band for any input code transition. It is usually specified for a full scale or major carry transition.

DRIFT

GAIN DRIFT – The change in full scale analog output over the specified temperature range expressed in parts per million of full scale range per °C (ppm of FSR/°C). Gain error is measured with respect to +25°C at high (T_H) and low (T_L) temperatures. Gain drift is calculated for both high (T_H -25°C) and low ranges (+25°C -T_L) by dividing the gain error by the respective change in temperature. The specification is the larger of the two representing worst case drift.

OFFSET DRIFT – The change in analog output with all bits OFF over the specified temperature range expressed in parts per million of full scale range per °C (ppm of FSR/°C). Offset error is measured with respect to +25°C at high (T_H) and low (T_L) temperatures. Offset Drift is calculated for both high (T_H -25°C) and low (+25°C -T_L) ranges by dividing the offset error by the respective change in temperature. The specification given is the larger of the two, representing worst-case drift.

POWER SUPPLY SENSITIVITY

Power Supply Sensitivity is a measure of the change in gain and offset of the D/A converter resulting from a change in -15V, +5V or +15V supplies. It is specified under DC conditions and expressed as parts per million of full scale range per percent of change in power supply (ppm of FSR/%).

COMPLIANCE

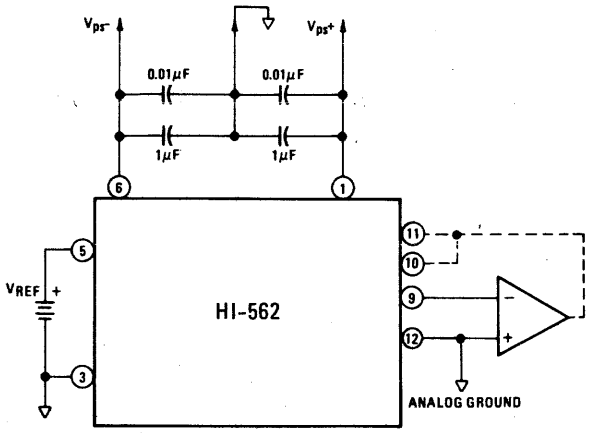
Compliance voltage is the maximum output voltage range that can be tolerated and still maintain its specified accuracy. Compliance limit implies functional operation only and makes no claims to accuracy.

GLITCH

A glitch on the output of a D/A converter is a large transient spike resulting from unequal internal ON-OFF switching times. Worst case glitches usually occur at half-scale or the major carry code transition from 011...1 to 100...0 or vice versa. For example, if turn ON is greater than turn OFF for 011...1 to 100...0, an intermediate state of 000...0 exists, such that, the output momentarily glitches to zero output. Matched switching times and fast switching will reduce glitches considerably.

DECOUPLING AND GROUNDING

For best accuracy and high frequency performance, the grounding and decoupling scheme shown in Figure 1 should be used. Decoupling capacitors should be connected close to the HI-562 (preferrably to the device pins) and should be tantalum or electrolytic bypassed with ceramic types for best high frequency noise rejection.



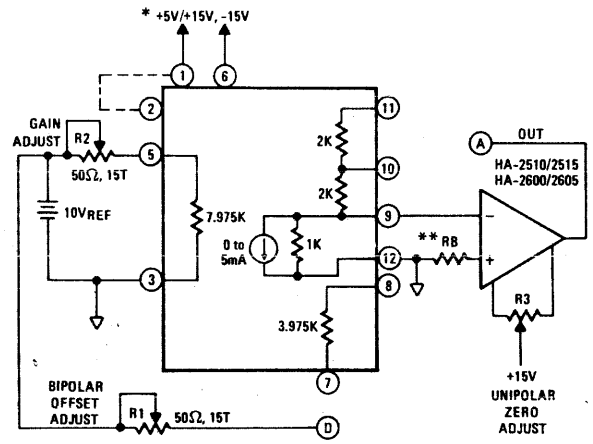


Figure 1

UNIPOLAR AND BIPOLAR VOLTAGE OUTPUT CONNECTIONS

CONNECTIONS – Using an external resistive load, the output compliance should not exceed ±1V to maintain specified accuracy. For higher output voltages, accuracy can be maintained by using an external op amp and the internal span resistors as shown in Figure 2 and defined in Table 1 for unipolar and bipolar modes.

* For TTL and DTL compatibility, connect +5V to pin 1 and leave pin 2 open. For CMOS compatibility, connect digital power supply (+4.85V ≤ VDD ≤ +12V) to pin 1 and short pin 2 to pin 1.

** Bias resistor, RB, should be chosen to equalize op amp offset voltage due to bias current. Its value is calculated from the parallel combination of the current source output resistance (1K) and the op amp feedback resistor. See Table 1 for values of RB.

Figure 2

Table 1

	OUTPUT RANGE	CONNECTIONS Pin 7 to	Pin 8 to	Pin 10 to	Pin 11 to	BIAS (R_B) RESISTOR
Unipolar Mode	0 to +10V	N.C.	N.C.	A	N.C.	667Ω
	0 to +5V	N.C.	N.C.	A	9	500Ω
Bipolar Mode	±10V	D	9	N.C.	A	667Ω
	±5V	D	9	A	N.C.	580Ω
	±2.5V	D	9	A	9	444Ω

EXTERNAL GAIN AND ZERO CALIBRATION (See Figure 2)

The input reference resistor (7.975K) and bipolar offset resistors shown in Figure 2 are both intentionally set low by 25Ω to allow the user to externally trim-out initial errors to a very high degree of precision. The adjustments are made in the voltage output mode using an external op amp as current-to-voltage converter and the HI-562 internal scaling resistors as feedback elements for optimum accuracy and temperature coefficient. For best accuracy over temperature, select an op amp that has good front-end temperature coefficients such as the HA-2600/2605 with offset voltage and offset current tempco's of 5μV/°C and 1nA/°C, respectively. For high speed voltage mode applications where fast settling is required, the HA-2510/2515 is recommended for better than 1.5μs settling to 0.01%. Using either one, potentiometer R_3 conveniently nulls unipolar offset plus op amp offset in one operation (for HA-2510/2515 and HA-2600/2605 use R_3 = 20K and 100K, respectively). For bipolar mode operation, R_3 should be used to null op amp offset to optimize its tempco (i.e., short 9 to A and adjust R_3 for zero before calibrating in bipolar mode). The gain and bipolar offset adjustment range using 50Ω potentiometers is ±12 LSB and ±25 LSB respectively. If desired, the potentiometers can be replaced with fixed 24.9Ω (1%) resistors resulting in an initial gain and bipolar offset accuracy of typically ±1/2 LSB.

UNIPOLAR CALIBRATION

Step 1: Unipolar Offset
- Turn all bits OFF
- Adjust R3 for zero volts output

Step 2: Gain
- Turn all bits ON
- Adjust R2 for an output of FS -1 LSB
  That is, adjust for:
  9.9976V for 0V to +10V range
  4.9988V for 0V to +5V range

BIPOLAR CALIBRATION

Step 1: Bipolar Offset
- Turn all bits OFF
- Adjust R1 for an output of:
  -10V for ±10V range
  -5V for ±5V range
  -2.5V for ±2.5V range

Step 2: Gain
- Turn bit 1 (MSB) ON; all other bits OFF
- Adjust R2 for zero volts output

HI-1080/1085

Precision Monolithic 8-Bit D to A Converter

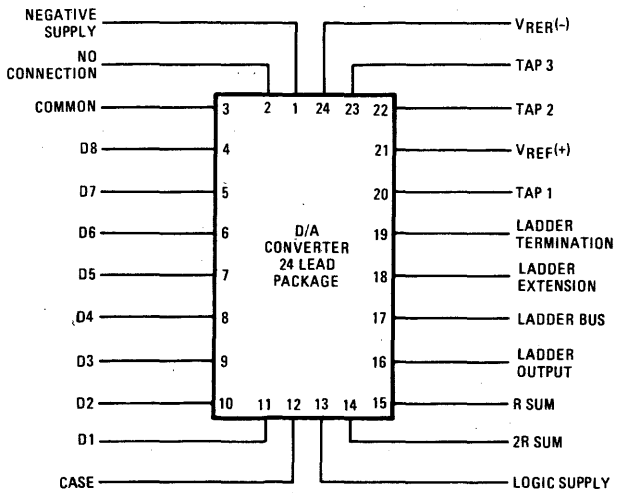
FEATURES

- GUARANTEED ±1 L.S.B. ACCURACY OVER TEMPERATURE
  - HI-1080 -55°C to +125°C
  - HI-1085 0°C to +75°C
- FAST SETTLING 1.5 μs to ½ L.S.B.
- EXPANDABLE FOR HIGHER RESOLUTIONS
- MONOLITHIC CONSTRUCTION
- DTL/TTL COMPATIBLE INPUTS
- RELIABLE MONOLITHIC CONSTRUCTION MEETS REQUIREMENTS OF MIL-STD-883

APPLICATIONS

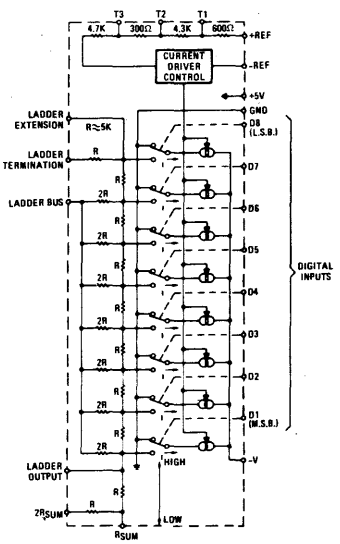
- WAVEFORM SYNTHESIZERS
- MICROPROCESSOR I/O INTERFACE
- HIGH REL APPLICATIONS
- A TO D CONVERTER (USING COMPARATOR AND DIGITAL LOGIC)
- DATA ACQUISITION SYSTEMS

DESCRIPTION



The HI-1080/1085 is a monolithic 8 bit digital-to-analog converter employing bipolar current switches feeding a thin film R-2R ladder network.

Because of the excellent stability of this device, it is practical to specify one all-inclusive accuracy parameter: ±1L.S.B. accuracy over the operating temperature range. This means that once the desired full scale output level is set at room temperature by adjustment of the input reference current, each of the 256 output levels will always measure within ±1 L.S.B. of the corresponding output of a "perfect" DAC. Thus the accuracy specification includes the worst case effects of all of the normally published errors such as non-linearity, zero drift, full scale drift, etc.



The device is exceptionally versatile, since it may be used in a voltage or current output mode, and may be offset to produce bipolar operation. Matched auxillary resistors are provided for amplifier feedback or current summing. Provisions are also made for scale factor adjustment and for cascading of additional D/A converters for extended resolution.

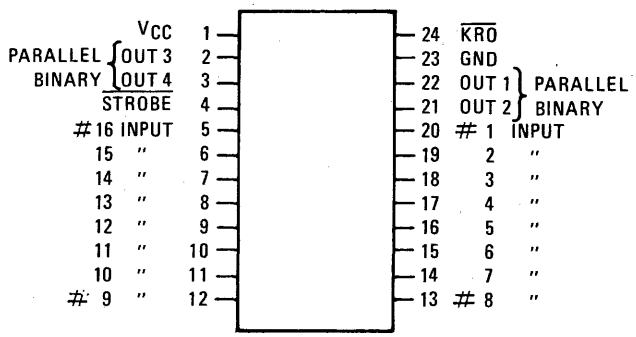
Keyboard Encoder

FEATURES

- STROBE OUTPUT
- KEY ROLLOVER OUTPUT
- EXPANDABLE: 2 PACKAGES REQUIRED FOR FULL TELETYPEWRITER, EIGHT-BIT ENCODING
- SINGLE +5.0V SUPPLY REQUIRED
- DTL/TTL OUTPUTS
- MONOLITHIC RELIABILITY

APPLICATIONS

- MICROPROCESSOR DATA ENTRY (16 KEY TO HEX CODE)
- BCD DATA ENTRY
- TYPEWRITER TYPE KEYBOARDS
- CONTROL PANELS



DESCRIPTION

The HD-0165 Keyboard Encoder is a 16 line to four-bit parallel encoder intended for use with manual data entry devices such as calculator or typewriter keyboards. In addition to the encoding function, there is a Strobe output and a Key Rollover output which energizes whenever two or more inputs are energized simultaneously. Any four-bit code can be implemented by proper wiring of the input lines. Inputs are normally wired through the key switches to the +5.0V power supply. Full typewriter keyboard encoding up to eight bits can be accomplished with two Encoder circuits by the use of double pole key switches or single pole switches with two isolation diodes per key. Outputs will interface with all popular DTL and TTL logic families. The circuit is packaged in a hermetic 24-pin dual-in-line package and operates over the temperature range of 0°C to +75°C.

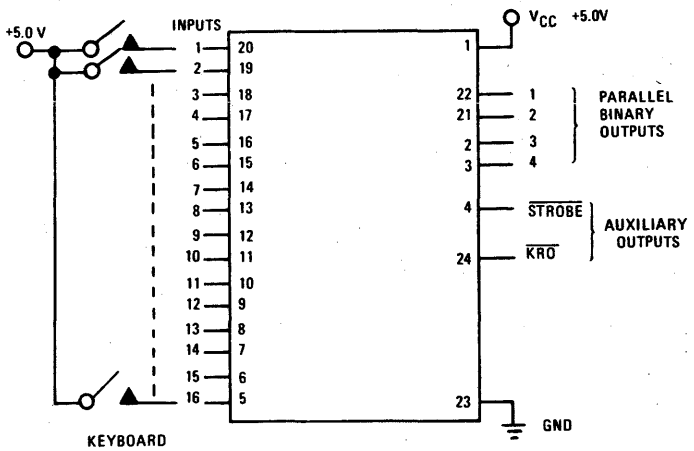

Figure 1. GENERAL CONFIGURATION FOR ENCODING TWO TO SIXTEEN KEYS

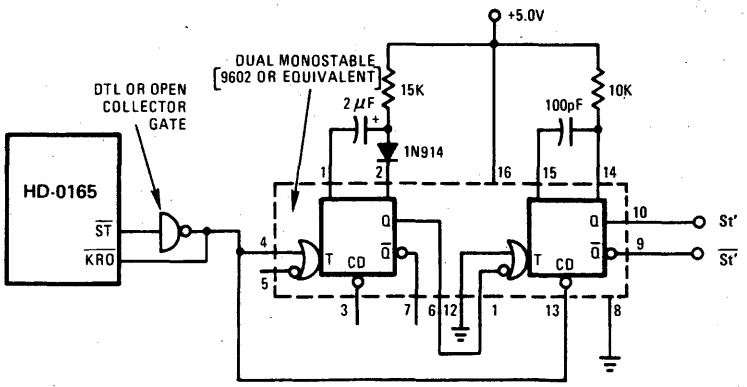
The Truth Table is used to determine wiring from the key switches to Encoder inputs to produce desired output codes.



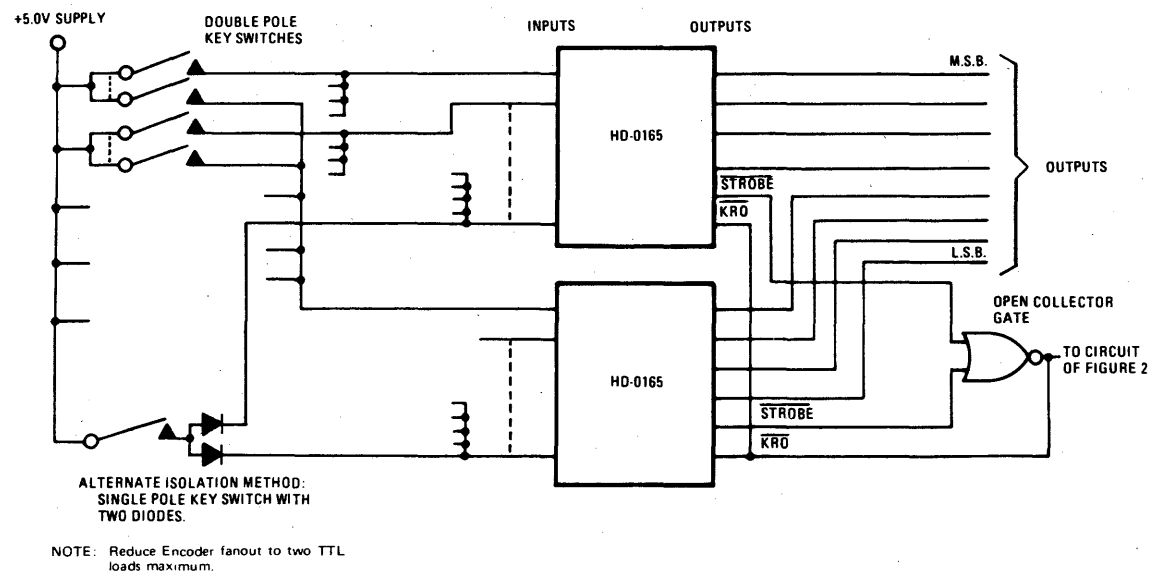


Figure 2. SWITCH BOUNCE ELIMINATION

This circuit generates a delayed Strobe pulse (St'). Delay time is determined by first monostable and should be about 10ms. Pulse width is determined by second monostable and should be set according to system requirements. Effect of switch bounce or arcing on make or break is positively eliminated and proper encoding will take place under two key rollover conditions.

NOTE: Reduce Encoder fanout to two TTL loads maximum.

Figure 3. ENCODING UP TO 256 KEYS

Use upper Encoder to produce the four most significant output bits; the lower to produce the least significant bits. Use Truth Table and required output codes to determine wiring from each key to the two Encoders.

SHIFT and CONTROL functions can be implemented by logic gates in series with the output lines.

HD-245/545 *Triple Line Transmitter*
HD-246/546/249/549 *Triple Line Receivers*
HD-248/548 *Triple Party Line Receiver*

FEATURES

- CURRENT MODE OPERATION
- HIGH SPEED: 15MHz WITH 50 FT. CABLE; 2MHz WITH 1,000 FT. CABLE
- HIGH NOISE IMMUNITY
- LOW EMI GENERATION
- LOW POWER DISSIPATION
- HIGH COMMON MODE REJECTION
- TRANSMITTER AND RECEIVER PARTY LINE CAPABILITY
- TOLERATES -2.0V GROUND DIFFERENTIAL (Transmitter with respect to receiver)
- TRANSMITTER INPUT/RECEIVER OUTPUT TTL/DTL COMPATIBLE

APPLICATIONS

- AIRCRAFT INSTRUMENTATION
- TELEMETRY
- INDUSTRIAL CONTROLS
- DATA EXCHANGE WITHIN AND BETWEEN BUILDINGS

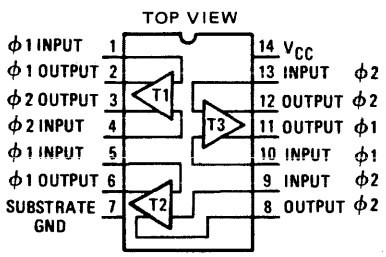
DESCRIPTION

Each transmitter-receiver combination provides a digital interface between systems linked by 100Ω twisted pair, shielded cable. Each device contains three circuits fabricated within a single monliithic chip. Data rates greater than 15MHz are possible depending on transmission line loss characteristics and length.

The transmitter employs constant current switching which provides high noise immunity along with high speeds, low power dissipation, low EMI generation and the ability to drive high capacitance loads. In addition, the transmitters can be turned "off", allowing several transmitters to time-share a single line.

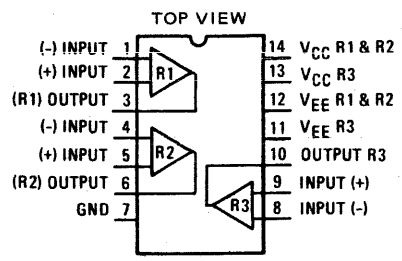
Receiver input/output differences are shown in the following table:

	INPUT	OUTPUT
HD-246 / 546	100 Ω	OPEN COLLECTOR
HD-248 / 548	HI-Z	6K PULL-UP RES.
HD-249 / 549	100Ω	6K PULL-UP RES.



The internal 100Ω cable termination consists of 50Ω from each input to ground.

HD-248/548 "party line" receivers have a high-Z input such that as many as ten of these receivers can be used on a single transmission line.



Each transmitter input and receiver output can be connected to TTL and DTL systems. When used with shielded transmission line, the transmitter-receiver system has very high immunity to capacitive and magnetic noise coupling from adjacent conductors. The system can tolerate ground differentials of -2.0V to +20.0V (transmitter with respect to receiver).

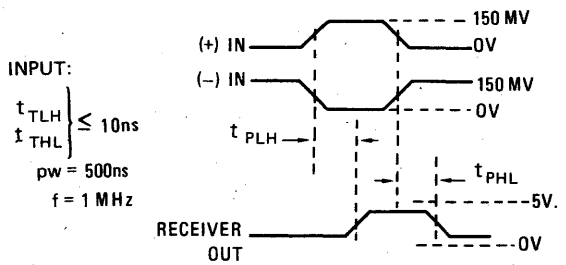
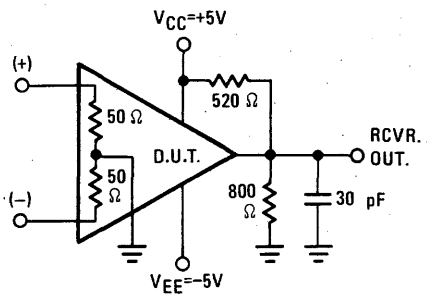
TEST CIRCUITS

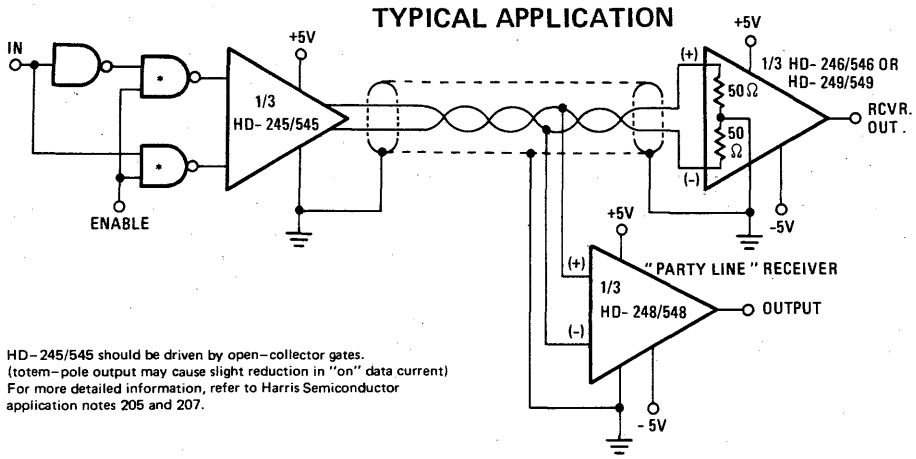


TEST CIRCUIT 1 - TRANSMITTER PROPAGATION DELAY



All measurements referenced to 50 % V points

TEST CIRCUIT 2 - RECEIVER PROPAGATION DELAY



All measurements referenced to 50%V points.

NOTE: External 50Ω resistors needed for HD–248/548.

APPLICATIONS

TYPICAL APPLICATION

* HD–245/545 should be driven by open–collector gates. (totem–pole output may cause slight reduction in "on" data current) For more detailed information, refer to Harris Semiconductor application notes 205 and 207.

Octal Latch
Octal Register

SN54/74S373 and Options
SN54/74S374 and Options

FEATURES

- Inverting and Non-Inverting Outputs
- 20 mA and 32 mA I_{OL}
- 3-State Outputs Drive Bus Lines
- Slim 20 Pin Package Saves Space
- 8 Bits Matches Byte Boundaries
- Hystersis Improves Noise Margin
- Low Current PNP Inputs Reduce Loading
- Ideal for Microprocessor Interface

DESCRIPTION

The latch passes eight (octal) bits of data from the inputs (D) to the outputs (Q) when the gate (G) is high. The data is "latched" when the gate (G) goes low. The register loads eight (octal) bits of input data and passes it to the output on the "rising edge" of the clock.

The three state outputs are active when $\overline{OE}$ is low, and high impedance when $\overline{OE}$ is high. Schmitt-trigger buffers at the gate/clock inputs improve system noise margin by providing typically 400 mV of hystersis.

The SN54/74SXXX device types are industry standard parts. The 57/67SXXX device types are Monolithic Memories' "enhanced" versions. The enhancements include:

1) Increased output sink current (I_{OL}) from the standard Schottky I_{OL} of 20 mA to an improved 32 mA.

2) Inverting outputs instead of the standard non-inverting outputs.

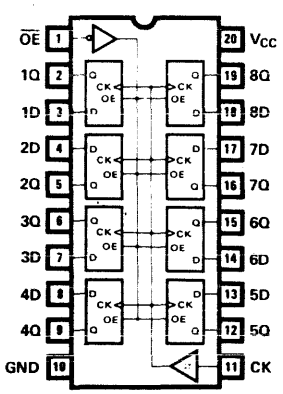
		32 mA	com	67S378	J, N	20
			mil	57S378	J	20

Package Types: J - Ceramic DIP, N - Plastic DIP



The higher I_{OL} is intended for upgrading systems which presently satisfy 32 mA requirements with SN54/74365, 366, 367, 368, Hex Buffers. The inverting outputs are intended for bus applications that require inversion as in interfacing the Am 2901A 4-Bit Slice to an active low bus.

All of the octal devices are packaged in the popular 20 pin skinny DIP.

Octal Buffers

SN74S240 SN74S241 SN74S244
SN54S240 SN54S241 SN54S244

FEATURES

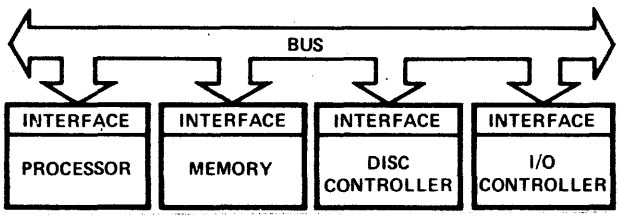
- 3-State Outputs Drive Bus Lines
- Slim 20 Pin Package Saves Space
- 8 Bits Matches Byte Boundaries
- Hystersis Improves Noise Margin
- Low Current PNP Inputs Reduce Loading
- Ideal for Microprocessor Interface

DESCRIPTION

The Octal Buffers pack eight high current bus drivers into one 20 pin skinny DIP. Each output can deliver a source current of 15 mA and a sink current of 64 mA. The drive power is sufficient to drive two of the popular 330Ω/220Ω computer peripheral terminations. (Two are important as both ends of a transmission line need to be terminated). PNP inputs and hystersis provide improved fan-in and 400 mV noise margin.

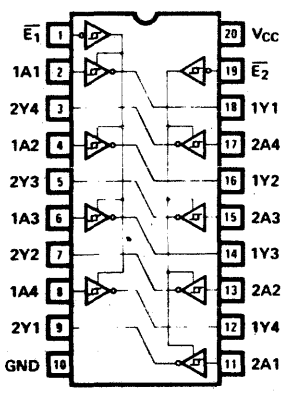
The series includes three options which are distinguished as follows:

DEVICE	OUTPUT	ENABLE
S240	inverting	active low
S241	non-inverting	active low and active high
S244	non-inverting	active low



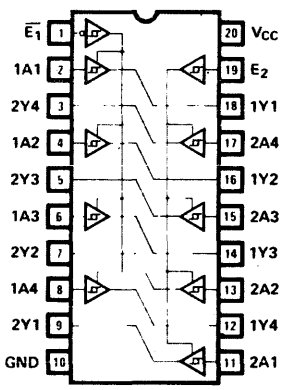
The S240 and S244 provide both output polarities with the standard active low enable ($\overline{E}$ low enables the output). The S241 allows transceiver operation when $\overline{E}$ and E are tied together.

TYPE	OUTPUT	I_{OL}	TEMP	PART NUMBER	PACKAGE TYPE	PACKAGE PINS
Buffer	invert	64 mA	com	SN74S240	J, N	20
	invert	48 mA	mil	SN54S240	J	20
	non-invert	64 mA	com	SN74S241	J, N	20
	non-invert	48 mA	mil	SN54S241	J	20
	non-invert	64 mA	com	SN74S244	J, N	20
	non-invert	48 mA	mil	SN54S244	J	20



Package Types: J - Ceramic DIP, N - Plastic DIP

APPLICATIONS



The Octal Buffers are used in both high performance microprogrammed digital processors and low performance MOS microcomputer systems. As buffers are used to interface computer components together over a common bus, their usage spans the entire digital system as shown below.

WHEN THE CHIPS ARE DOWN...

THE NEW 1978 IC MASTER PAYS OFF!

The new IC MASTER is the ultimate IC source book.

It lists virtually every IC device manufactured in the United States.

The IC MASTER is the easy, sensible means of narrowing down your IC choices quickly, accurately and systematically. All information is cross-referenced and indexed for rapid problem solving and device selection. And, additionally, the MASTER is updated three times yearly by accumulative supplements.

THE FORMAT OUTLINED:

- **FIVE MASTER SELECTION GUIDES** — Over 85 companies' IC's organized by type, function, key parameters
- **OVER 1500 PAGES OF TECHNICAL INFORMATION** — Provided directly by manufacturers covering 20,000 IC's
- **ALTERNATE SOURCE DIRECTORY** — The only industry-wide, pin-for-pin version available
- **MILITARY PARTS INDEX AND CROSS REFERENCE CHART** — identifies all IC's with JAN qualification
- **MILITARY DEVICE TESTING TABLE** — List companies that screen to Mil. Std. 883
- **MILITARY PARTS INDEX** — The first functional guide to JAN qualified parts
- **PART NUMBER INDEX** — Parts from over 80 manufacturers, in numerical sequence
- **APPLICATION NOTE DIRECTORY** — Digest of currently active application note material
- **PRODUCT INDEX** — Provides alphanumeric listing of over 80 manufacturers' lines
- **PART NUMBER GUIDE** — Instantly decodes each company's part numbering system
- **MANUFACTURERS AND DISTRIBUTORS DIRECTORY**

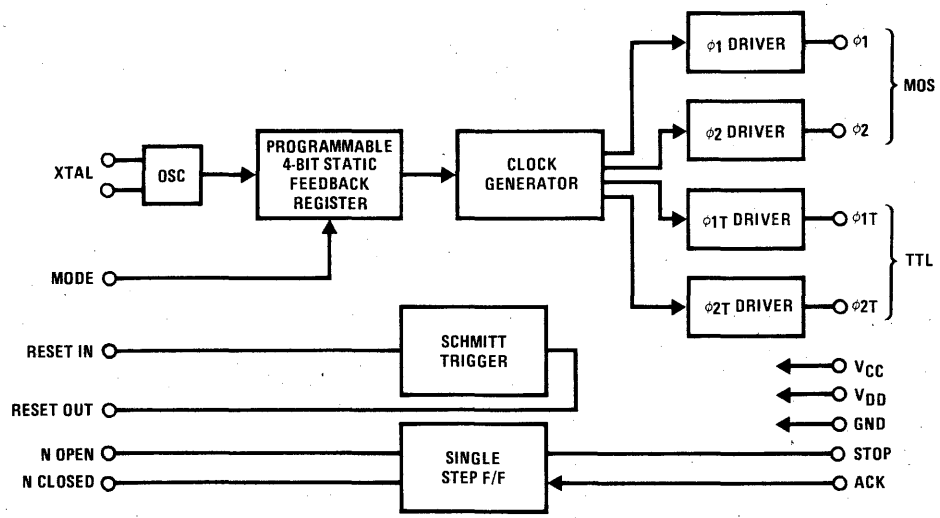
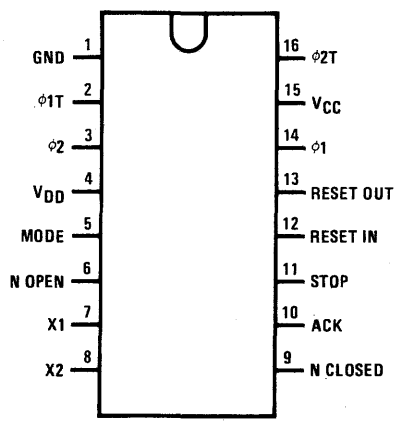
DP/INS4201 clock generator



general description

The DP4201 Clock Generator is designed for 4004 micro-computer series family applications, and satisfies clock signal requirements MCS-40™ and FIPS (4-Bit Integrated Processing System) micro-computer devices. An externally crystal controlled oscillator is required for generation of TTL and MOS level clock signals. Power "ON" or external reset may be accomplished with the DP4201. A single step feature also exists.

features



- Satisfies clock requirements for FIPS and MCS-40
- Crystal controlled oscillator
- MOS and TTL level clock outputs
- Power "ON" and external reset control
- Operative frequency from dc to 6 MHz

pin description

Pin No.	Designation	Description of Function
1	GND	Circuit ground potential. This pin can be left floating for low power application. MOS clock output will be operative. TTL clock outputs will not.
2	ϕ_{1T}	Phase 1. TTL level clock output. Positive true.
3	ϕ_2	Phase 2. MOS level clock output.
4	V_{DD}	Main power supply pin. $V_{DD} = V_{CC} - 15V \pm 5\%$.
5	MODE	Counter mode control pin. Determines whether counter divides basic frequency by 8 or 7. Mode = V_{CC}; ÷7 Mode = V_{DD}; ÷8
6	N. OPEN	Input of single step circuitry to which normally open contact of SPDT switch is connected.
7	X1	External crystal connection. This pin may be driven by an external frequency source. X2 should be left unconnected.
8	X2	External crystal connection.
9	N. CLOSED	Input of single step circuitry to which normally closed contact of SPDT switch is connected.
10	ACK	Acknowledge input to single step circuitry normally connected to stop acknowledge output of 4004.
11	STOP	Stop output of single step circuitry normally connected to stop input of 4004. A SPDT toggle switch may be inserted in this line for RUN/HALT control.
12	RESET IN	Input to which RC network is connected to provide power on reset timing.
13	RESET OUT	This signal is active low.
14	ϕ_1	Phase 1 MOS level clock output.
15	V_{CC}	Circuit reference potential—most positive supply voltage.
16	ϕ_{2T}	Phase 2. TTL level clock output. Positive true.

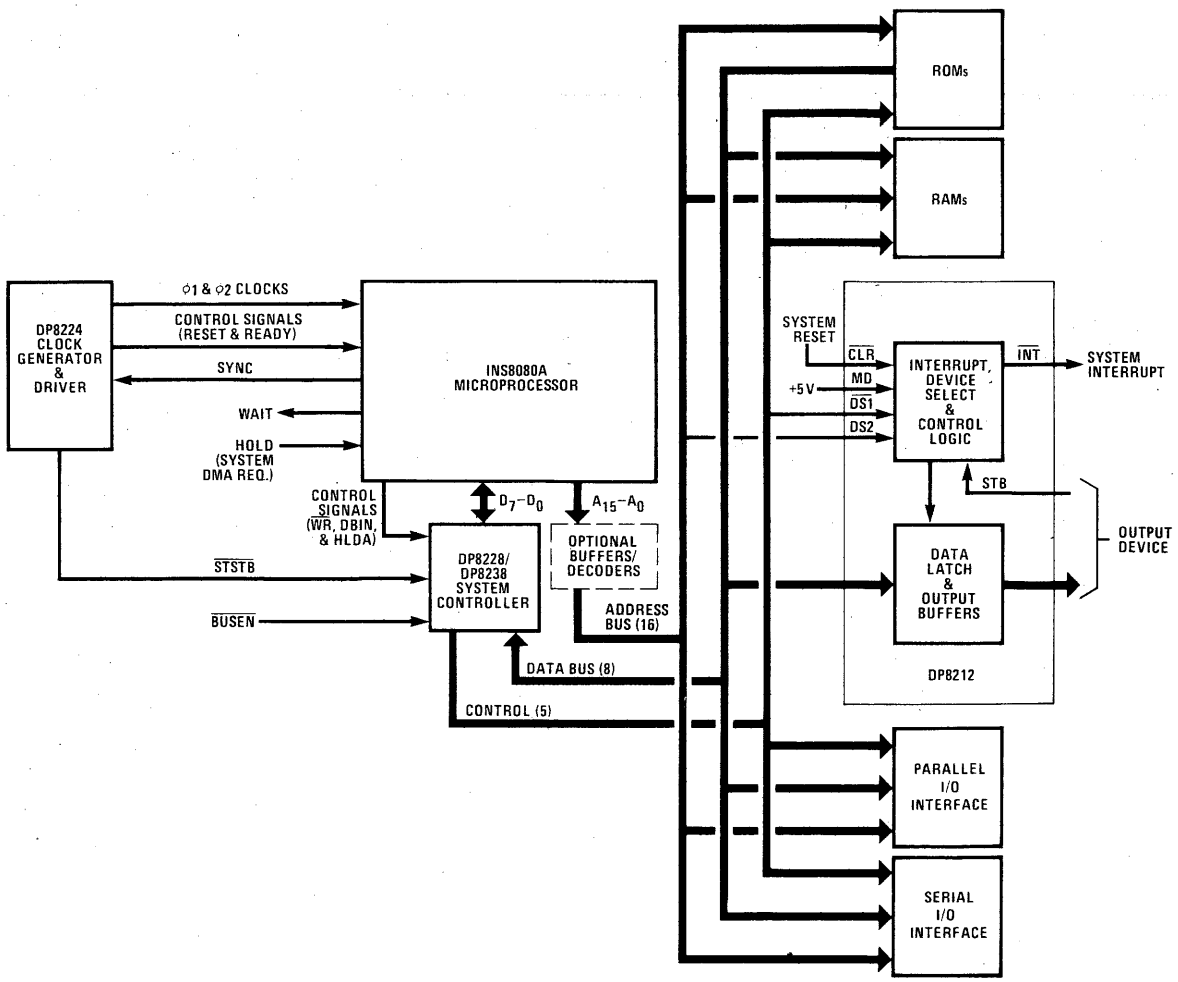
DP8212 8-Bit Input/Output Port

general description



The DP8212 is an 8-bit input/output port contained in a standard 24-pin dual-in-line package. The device, which is fabricated using Schottky Bipolar technology, is part of National Semiconductor's N8080 microcomputer family. The DP8212 can be used to implement latches, gated buffers, or multiplexers. Thus, all of the major peripheral and input/output functions of a microcomputer system can be implemented with this device.

The DP8212 includes an 8-bit latch with TRI-STATE® output buffers, and device selection and control logic. Also included is a service request flip-flop for the generation and control of interrupts to the microprocessor.

features

- 8-Bit Data Latch and Buffer
- Service Request Flip-flop for Generation and Control of Interrupts
- 0.25mA Input Load Current
- TRI-STATE TTL Output Drive Capability
- Outputs Sink 15mA
- Asynchronous Latch Clear
- 3.65V Output for Direct Interface to INS8080A
- Reduces System Package Count by Replacing Buffers, Latches, and Multiplexers in Microcomputer Systems

DP8212 functional pin definitions

The following describes the function of all the DP8212 input/output pins. Some of these descriptions reference internal circuits.

INPUT SIGNALS

Device Select ($\overline{DS_1}$, DS_2): When $\overline{DS_1}$ is low and DS_2 is high, the device is selected. The output buffers are enabled and the service request flip-flop is asynchronously reset (cleared) when the device is selected.

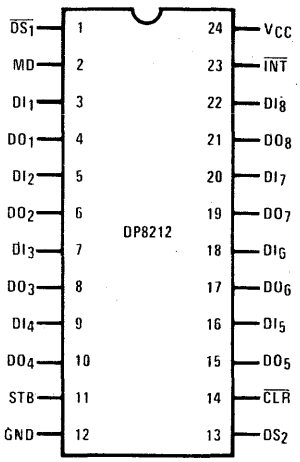
Mode (MD): When high (output mode), the output buffers are enabled and the source of the data latch clock input is the device selection logic ($DS_1 \cdot DS_2$). When low (input mode), the state of the output buffers is determined by the device selection logic ($DS_1 \cdot DS_2$) and the source of the data latch clock input is the strobe (STB) input.

©IC MASTER 1978

DP8212 functional pin definitions (cont'd.)

Strobe (STB): Used as data latch clock input when the mode (MD) input is low (input mode). Also used to synchronously set the service request flip-flop, which is negative edge triggered.

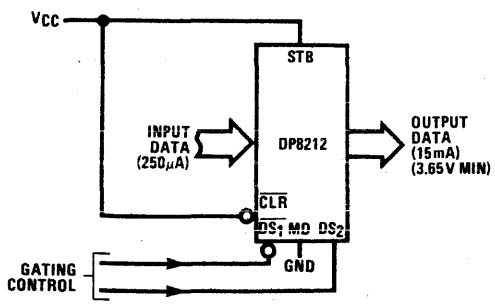
Data In ($DI_1 - DI_8$): Eight-bit data input to the data latch, which consists of eight D-type flip-flops. While the data latch clock input is high, the Q output of each flip-flop follows the data input. When the clock input returns low, the data latch stores the data input. The clock input high overrides the clear ($\overline{CLR}$) input data latch reset.



Clear ($\overline{CLR}$): When low, asynchronously resets (clears) the data latch and the service request flip-flop. The service request flip-flop is in the non-interrupting state when reset.

OUTPUT SIGNALS

Interrupt ($\overline{INT}$): Goes low (interrupting state) when either the service request flip-flop is synchronously set by the strobe (STB) input or the device is selected.



Data Out ($DO_1 - DO_8$): Eight-bit data output of data buffers, which are TRI-STATE, non-inverting stages. These buffers have a common control line that either enables the buffers to transmit the data from the data latch outputs or disables the buffers by placing them in the high-impedance state.

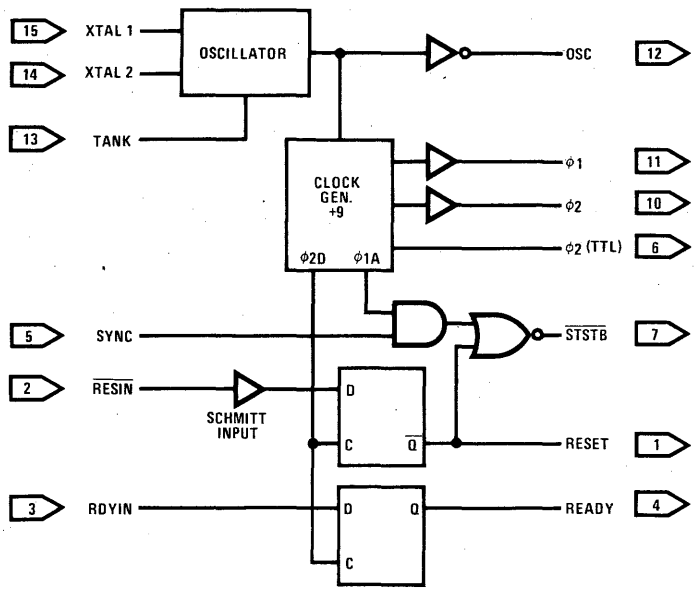
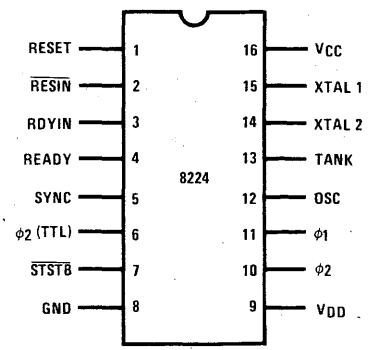
DP8224 Clock Generator and Driver

general description



The DP8224 is a clock generator/driver contained in a standard, 16-pin dual-in-line package. The chip, which is fabricated using Schottky Bipolar technology, generates clocks and timing for National Semiconductor's N8080 microcomputer family.



Included in the DP8224 is an oscillator circuit that is controlled by an external crystal, which is selected by the designer to meet a variety of system speed requirements. Also included in the chip are circuits that provide: a status strobe for the DP8228 or DP8238 system controllers, power-on reset for the INS8080A microprocessor, and synchronization of the READY input to the INS8080A.

features

- Crystal-Controlled Oscillator for Stable System Operation
- Single Chip Clock Generator and Driver for INS8080A Microprocessor
- Provides Status Strobe for DP8228 or DP8238 System Controllers
- Provides Power-On Reset for INS8080A Microprocessor
- Synchronizes READY Input to INS8080A Microprocessor
- Provides Oscillator Output for Synchronization of External Circuits
- Reduces System Component Count

DP8224 functional pin definitions

The following describes the function of all of the DP8224 input/output pins. Some of these descriptions reference internal circuits.

INPUT SIGNALS

Crystal Connections (XTAL 1 and XTAL 2): Two inputs that connect an external, series resonant, crystal to the oscillator circuit of the DP8224. Normally, a fundamental mode crystal is used to determine the basic operating frequency of the oscillator. However, overtone mode crystals may also be used. The crystal frequency is nine times the desired microprocessor speed (that is, crystal frequency = $1/t_{CY} \times 9$). When the crystal frequency is above 10 MHz, a selected capacitor (3 to 10 picofarads) may have to be connected in series with the crystal to produce the exact desired frequency.

Tank: Allows the use of overtone mode crystals with the oscillator circuit. When an overtone mode crystal is used, the tank input connects to a parallel LC network that is ac coupled to ground. The formula for determining the resonant frequency of this LC network is as follows:

$$F = \frac{1}{2\pi\sqrt{LC}}$$

Synchronizing (SYNC) Signal: When high, indicates the beginning of a new machine cycle. The INS8080A microprocessor outputs a status word (which describes the current machine cycle) onto its data bus during the first state (SYNC interval) of each machine cycle.

Reset In ($\overline{\text{RESIN}}$): Provides an automatic system reset and start-up upon application of power as follows. The $\overline{\text{RESIN}}$ input, which is obtained from the junction of an external RC network that is connected between V_{CC} and ground, is routed to an internal Schmitt Trigger circuit. This circuit converts the slow transition of the power supply rise into a sharp, clean edge when its input reaches a predetermined value. When this occurs, an internal D-type flip-flop is synchronously reset, thereby providing the RESET output signal discussed below.

For manual system reset, a momentary contact switch that provides a low (ground) when closed is also connected to the $\overline{\text{RESIN}}$ input.

Ready In (RDYIN): An asynchronous READY signal that is re-clocked by a D-type flip-flop of the DP8224 to provide the synchronous READY output discussed below.

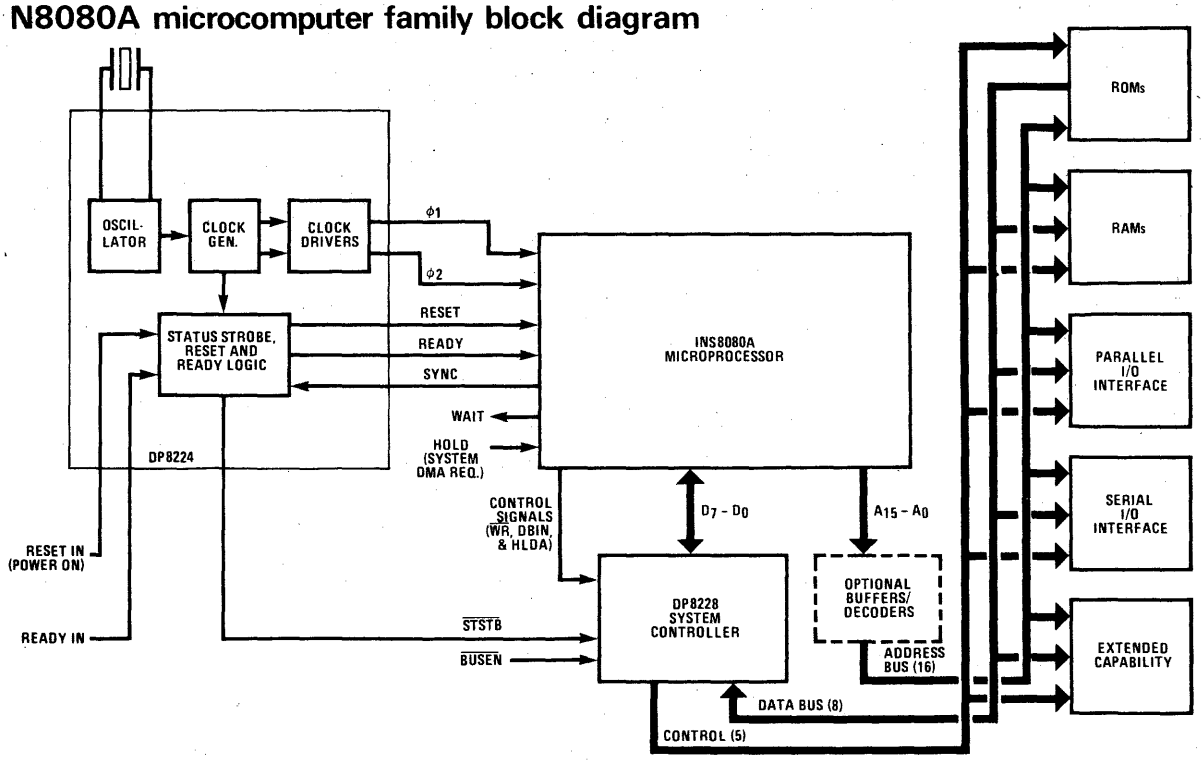
+5 Volts: V_{CC} supply.

+12 Volts: V_{DD} supply.

Ground: 0 volt reference.

OUTPUT SIGNALS

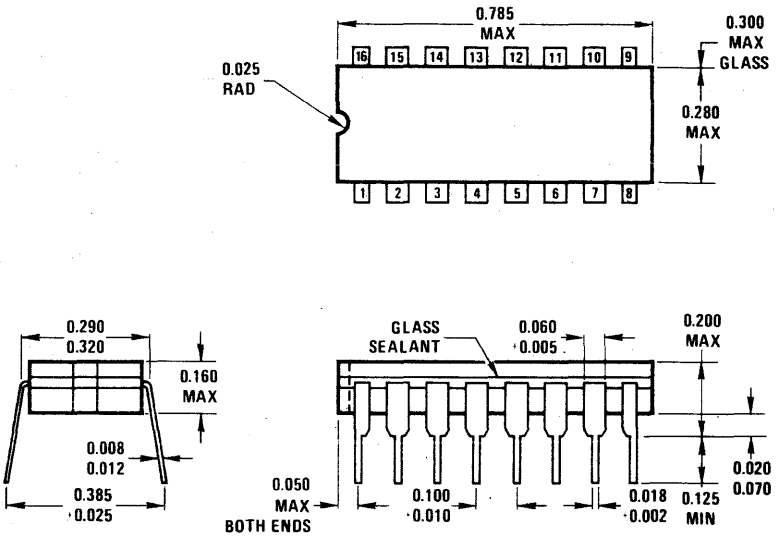
Oscillator (OSC): A buffered oscillator signal that can be used for external timing purposes.



ϕ_1 and ϕ_2 Clocks: Two non-TTL compatible clock phases that provide nonoverlapping timing references for internal storage elements and logic circuits of the INS8080A microprocessor. The two clock phases are produced by an internal clock generator that consists of a divide-by-nine counter and the associated decode gating logic.

ϕ_2 (TTL) Clock: A TTL ϕ_2 clock phase that can be used for external timing purposes.

Status Strobe ($\overline{\text{STSTB}}$): Activated (low) at the start of each new machine cycle. The $\overline{\text{STSTB}}$ signal is generated by gating a high-level SYNC input with the ϕ_{1A} timing signal from the internal clock generator of the DP8224. The $\overline{\text{STSTB}}$ signal is used to clock status information into the status latch of the DP8228 system controller and bus driver.



The power-on reset $\overline{\text{RESIN}}$ input also generates a $\overline{\text{STSTB}}$ signal. However, since this signal lasts for a longer duration, it is used to reset the status latch of the DP8228.

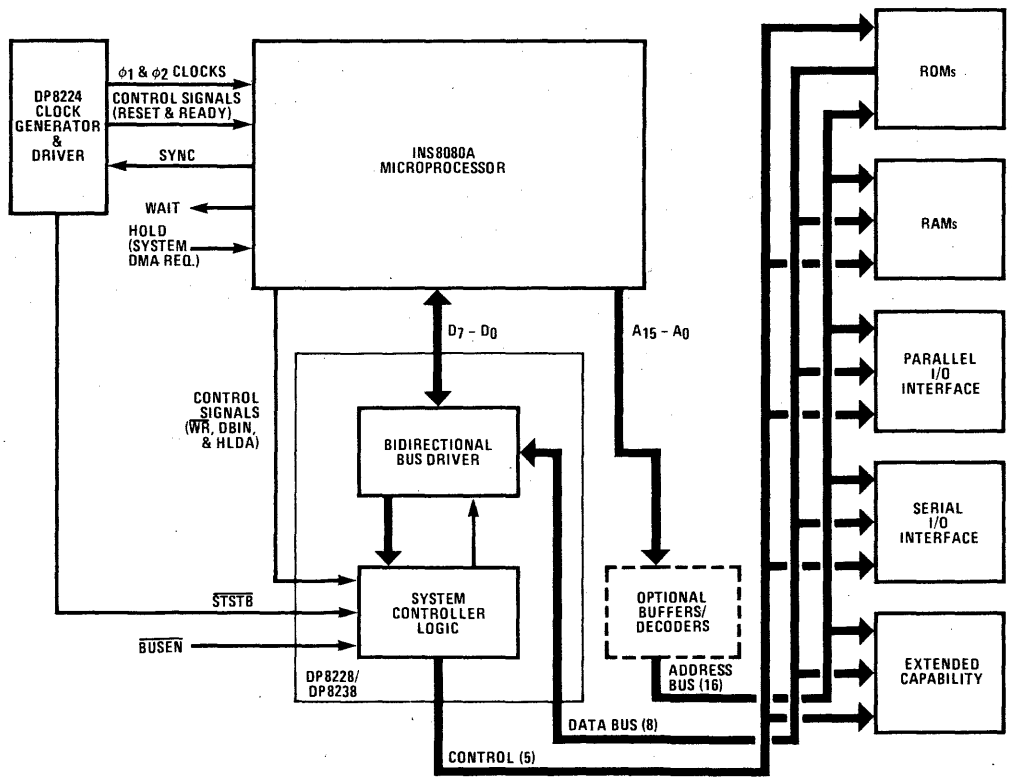
DP8228/DP8238 system controller and bus driver

general description



The DP8228/DP8238 is a system controller/bus driver contained in a standard, 28-pin dual-in-line package. The chip, which is fabricated using Schottky Bipolar technology, generates all the read and write control signals required to directly interface the memory and input/output components of National Semiconductor's INS8080A microcomputer family. The chip also provides drive and isolation for the bidirectional data bus of the INS8080A microprocessor. Data bus isolation enables the use of slower memory and input/output components in a system, and provides for enhanced system noise immunity.

A user-selected single-level interrupt vector (RST 7) is provided by the chip for use in the interrupt structure of small systems that need only one basic vector. No additional components (such as an interrupt instruction port) are required to use the single interrupt vector in these systems. The DP8228/DP8238 also generates an Interrupt Acknowledge ($\overline{INTA}$) control signal for each byte of a multibyte CALL instruction when an interrupt is acknowledged by the INS8080A. This feature permits the use of a multilevel priority interrupt structure in large, interrupt-driven systems.

features

- Single Chip System Controller and Bus Driver for INS8080A Microcomputer Systems
- Allows Use of Multibyte CALL Instructions for Interrupt Acknowledge
- Provides User-Selected Single-Level Interrupt Vector (RST 7)
- Provides Isolation for Data Bus
- Supports A Wide Variety of System Bus Structures
- Reduces System Component Count
- DP8238 Provides Advanced Input/Output Write and Memory Write Control Signals for Large System Timing Control

DP8228/DP8238 functional pin definitions

The following describes the function of all of the DP8228/DP8238 pinouts. Some of these descriptions reference internal circuits.

INPUT SIGNALS

Status Strobe ($\overline{STSTB}$): Activated (low) at the start of each new machine cycle. The $\overline{STSTB}$ input is used to store a status word (refer to chart) from the INS8080A microprocessor into the internal status latch of the DP8228/DP8238. The INS8080A outputs this status word onto its data bus during the first state (SYNC interval) of each machine cycle.

Data Bus In (DBIN): When high, indicates that the INS8080A data bus is in the input mode. The DBIN signal is used to gate data from memory or an input/output device onto the data bus.

Write ($\overline{WR}$): When low, indicates that the data on the INS8080A data bus are stable for WRITE memory or output operation.

Hold Acknowledge (HLDA): When high, indicates that the INS8080A data and address buses will go to their high impedance state. When in the data bus read mode, DBIN input in the high state, a high HLDA input will latch the data bus information into the driver circuits and gate off the applicable control signal $\overline{I/OR}$, $\overline{MEMR}$, or $\overline{INTA}$ (return to the output high state).

Bus Enable ($\overline{BUSEN}$): Asynchronous DMA input to the internal gating array of the DP8228/DP8238. When low, normal operation of the internal bidirectional bus driver and gating array occurs. When high, the bus driver and gating array are driven to their high impedance state.

V_{CC} Supply: +5 volts.

Ground: 0 volt reference.

OUTPUT SIGNALS

Memory Read ($\overline{MEMR}$): When low, signals data to be loaded in from memory. The $\overline{MEMR}$ signal is generated by strobing in status word 1, 2, or 4. (Refer to status word chart.)

Memory Write ($\overline{MEMW}$): When low, signals data to be stored in memory. The $\overline{MEMW}$ signal is generated for the DP8238 by strobing in status word 3 or 5. (Refer to status word chart.) For the DP8228, the $\overline{MEMW}$ signal is generated by gating a low-level $\overline{WR}$ input with the strobed in status word 3 or 5.

Input/Output Read ($\overline{I/OR}$): When low, signals data to be loaded in from an addressed input/output device. The $\overline{I/OR}$ signal is generated by strobing in status word 6.

Input/Output Write ($\overline{I/OW}$): When low, signals data to be transferred to an addressed input/output device. The I/OW signal for the DP8238 is generated by strobing in status word 7. For the DP8228 the $\overline{I/OW}$ signal is generated by gating in a low-level WR input with the strobed in status word 7.

Interrupt Acknowledge ($\overline{INTA}$): When low, indicates that an interrupt has been acknowledged by the INS8080A microprocessor. The $\overline{INTA}$ signal is generated by strobing in status word 8 or 10.

Single Level Interrupt (RST 7): When the $\overline{INTA}$ output is tied to 12 V through a 1 kΩ resistor, strobing in status work 8 or 10 will cause the CPU data bus outputs, when active, to go to the high state.

INPUT/OUTPUT SIGNALS

CPU Data (D_7 - D_0) Bus: This bus comprises eight TRI-STATE input/output lines that connect to the INS8080A microprocessor. The bus provides bidirec-

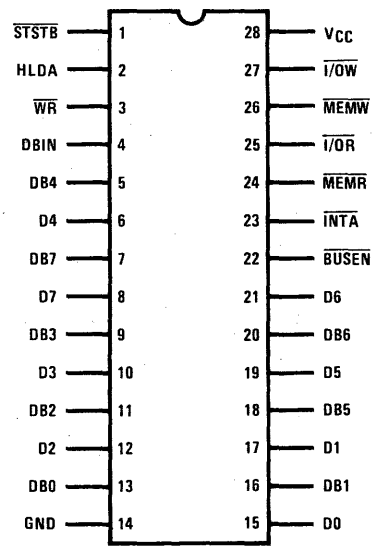
tional communication between the CPU, memory, and input/output devices for instructions and data transfers. A status word (which describes the current machine cycle) is also outputted on this data bus during the first microcycle of each machine cycle (SYNC = logic 1).



System Data (DB_7 - DB_0) Bus: This bus comprises eight TRI-STATE input/output lines that connect to the memory and input/output components of the system. The internal bidirectional bus driver isolates the DB_7 - DB_0 Data Bus from the D_7 - D_0 Data Bus.

Status Word Chart

DP8300 PACE bidirectional transceiver element (PACE BTE/8)

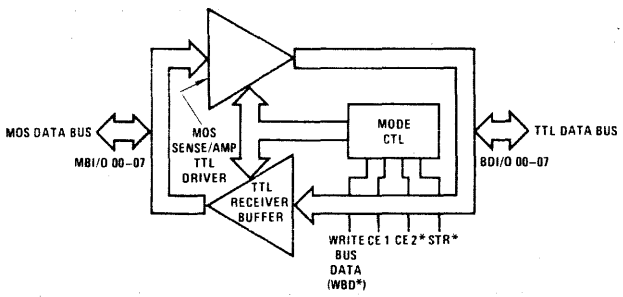
general description

The DP8300 is an 8-bit TRI-STATE® MOS/TTL bus transceiver element specifically intended for application in PACE microprocessor-based systems. Its electrical characteristics and control flexibility make the BTE/8 attractive in other applications requiring the translation of MOS current outputs to high fan-out TTL levels.

Two BTE/8 devices provide complete system buffering for all 16-bit address and data input/output between the PACE CPU and all system memory and peripheral interfaces.

In the driving mode, the MOS sense amplifiers convert the MOS current outputs of the PACE CPU to a fan-out 30 (50 mA) TTL system bus. [This characteristic makes the BTE/8 an ideal buffer (driving mode only) for the PACE system timing and control bus consisting of the address data strobe (NADS), input data strobe (IDS), output data strobe (ODS) and the four output control flags (F11, F12, F13, F14).]

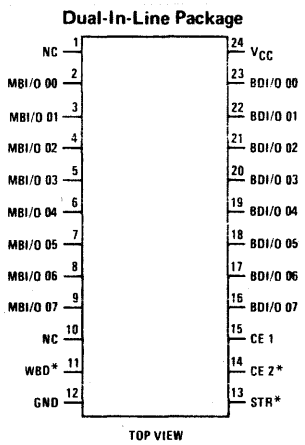
In the receiving mode the BTE accepts bus data through high impedance input buffers and applies the TTL signals to the PACE I/O pins.



A third mode allows both the MOS and TTL bus to be placed in the TRI-STATE (high impedance) mode. This function facilitates direct memory access (DMA) over the TTL system bus.

A latched chip enable allows the use of multiplexed address/data lines to drive CE 1 and CE 2*, selecting the BTE/8 for an input cycle. The latching function may be eliminated by connecting the strobe to ground.

features



- High TTL fan-out eliminates additional buffering requirements
- Low system data bus loading for minimum input drive
- TRI-STATE data ports and chip enables maximize application flexibility
- 8-bit parallel data flow reduces system package count
- Pin-outs are compatible with hybrid version and simplify system interconnections and layout
- Latched chip enable simplifies transmit/receive control
- High voltage output high level (V_{CC} − 1.1V) on TTL bus

I_{CC}	Power Supply Current	V_{CC} = 5.25V		70	110	mA

Note 1: "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. They are not meant to imply that the devices should be operated at these limits. The table of "Electrical Characteristics" provides conditions for actual device operation.

Note 2: Unless otherwise specified, min/max limits apply across the 0°C to +70°C temperature range and the 4.75V to 5.25V power supply range. All typicals are given for V_{CC} = 5V and T_A = 25°C.

Note 3: All currents into device pins are shown as positive, out of device pins are negative. All voltages are referenced to ground unless otherwise noted.

Note 4: Only one output at a time should be shorted.

Note 5: The MBI/O Input Characteristic Graph illustrates this parameter and defines the regions of guaranteed logical "0" and logical "1" outputs. See equivalent input structure for clarification. When the MBI/O input is loaded with a high impedance source (open), the TTL output will be in the logic "0" state.

Note 6: The maximum MOS bus positive input current specification is intended to define the upper limit on guaranteed input clamp operation. At higher input currents (up to the absolute maximum rating) clamp operation is not guaranteed but TTL bus logic state is valid and no device damage will occur.

Note 7: In most applications the MOS bus data lines are higher impedance and more sensitive to noise coupling than TTL bus lines. Conservative design practice would dictate routing MOS bus lines away from high speed, low impedance TTL lines and MOS clock lines or providing a ground shield when they are adjacent.

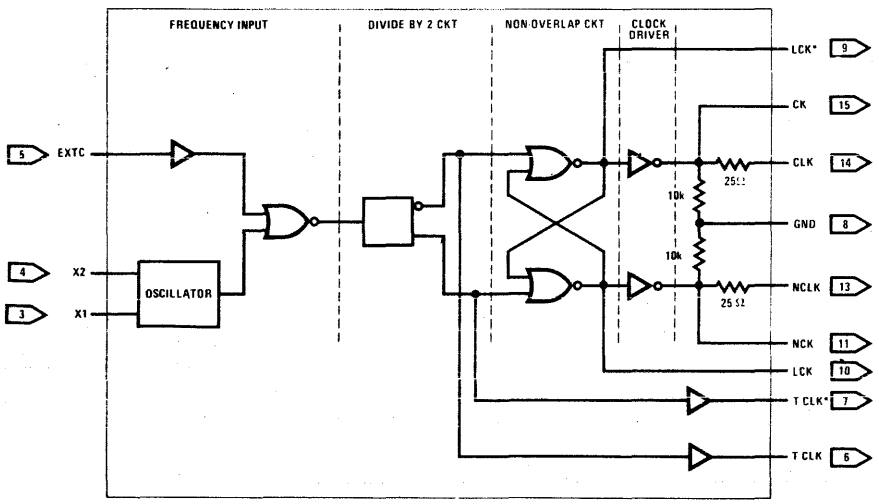
DP8302 PACE system timing element (PACE STE)

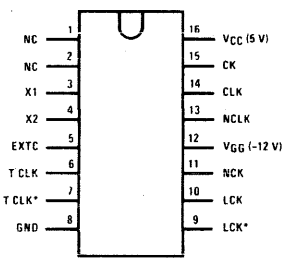
general description

The PACE STE provides an oscillator, CPU clock driver, and TTL system clocks in a single 16-pin DIP. The STE is intended specifically for application in PACE microprocessor-based systems.



An external crystal provides frequency control. True and complemented non-overlapping clock outputs are generated at one-half the oscillator frequency. Non-overlap intervals may be controlled with a single external capacitor. Series damping resistors are provided on the MOS (CPU) clock outputs (CLK, NCLK).

TTL level system clock outputs are also provided to facilitate the synchronizing of system operations.



features

- Internal Oscillator Driven Directly from External Crystal, Minimizing Package Count
- External Oscillator Input Maximizes Application Flexibility
- TTL System Clocks Simplify Interfaces and Facilitate Synchronization of System Operations
- MOS Clock Outputs, No External MOS Clock Drivers Required
- High Voltage Output High Level (V_{CC} − 1.1 V) on TTL System Clocks

recommended crystal specifications

- At-cut crystal
- 4.0 MHz ± 0.1%, or 2.6667 MHz ± 0.1%, fundamental mode
- 5 mW maximum
- 150 Ω maximum series resistance

functional description

OSCILLATOR

The oscillator incorporates a low-power inverter biased in the linear region utilizing an internal feedback network. An external crystal is connected between pins X1 and X2 to provide frequency control. EXTC must be grounded for this operating mode. The circuit board traces connecting the crystal to pins X1 and X2 should be as short as possible and should be physically isolated from all high energy level switching signal traces, particularly the CPU MOS clock lines.

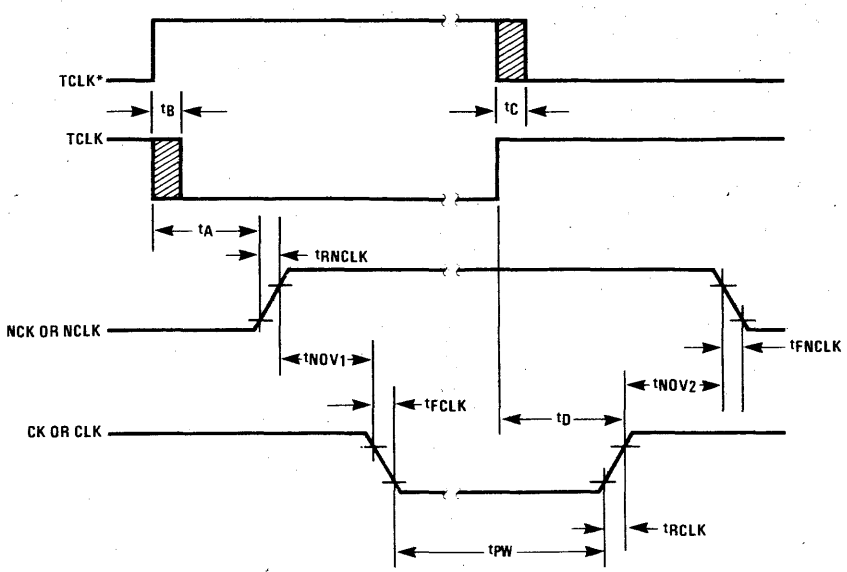
When an external oscillator is to be used in place of the internal crystal oscillator, pin X1 must be tied to V_{GG} and pin X2 must be left open. Then, EXTC may be used as a TTL input for the external oscillator.

DIVIDE AND SQUARING CIRCUIT

A flip-flop is used to provide a square wave clock signal by dividing the buffered oscillator output by two. The outputs of this circuit are buffered to provide TTL system clock signals which lead the MOS level clock outputs.

NON-OVERLAP CIRCUIT

The Divider output drives a cross-coupled latch containing a delay in the feedback path which insures non-overlapping MOS clock signals. The delay in the feedback path can be increased by connecting a capacitor between pins LCK and LCK*. The effect of the capacitor on increasing the non-overlap interval is shown in the Typical Characteristics section.



MOS CLOCK DRIVER

The MOS Clock Driver produces output voltage swings from the +5 V supply to the −12 V supply. CLK and NCLK outputs contain a 25 Ω series damping resistor, a typically optimum value for circuit board layouts with clock interconnect lines of less than two inches.

Undamped MOS clock outputs, CK and NCK, are also available in the event other values of series damping resistors are desired.

It is recommended that 0.1 μF high frequency capacitors be provided from V_{CC} to ground and from V_{GG} to ground immediately adjacent to the STE.

DP8304 8-bit bidirectional bus transceiver

general description

The DP8304 is an 8-bit bidirectional Bus transceiver able to drive a common Bus (B port) or 10 LS input loads (A port). Inputs to both ports are LSTTL. A chip disable provides TRI-STATE® to both ports when high, and data flow is controlled by the transmit/$\overline{\text{receive}}$ enable. Both outputs provide 3.6V V_{OH} when active. Signals are non-inverting for both ports. With T/$\overline{R}$ low data flows from B port to A port.

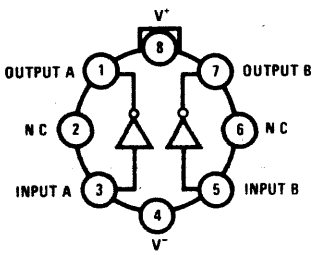
DS0025/DS0025C two phase MOS clock driver

general description



The DS0025/DS0025C is monolithic, low cost, two phase MOS clock driver that is designed to be driven by TTL/DTL line drivers or buffers such as the DM932, DS8830 or DM7440. Two input coupling capacitors are used to perform the level shift from TTL/DTL to MOS logic levels. Optimum performance in turn-off delay and fall time are obtained when the output pulse is logically controlled by the input. However, output pulse widths may be set by selection of the input capacitors eliminating the need for tight input pulse control.

features

- 8-lead TO-5 or 8-lead dual-in-line package
- High Output Voltage Swings—up to 30V
- High Output Current Drive Capability—up to 1.5A
- Rep. Rate: 1.0 MHz into > 1000 pF
- Driven by DM932, DS8830, DM7440 (SN7440)
- "Zero" Quiescent Power

DS0026, DS0056 5 MHz two phase MOS clock drivers

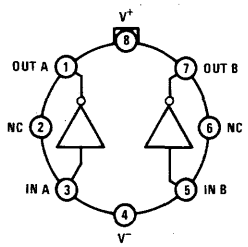
general description

DS0026/DS0056 are low cost monolithic high speed two phase MOS clock drivers and interface circuits. Unique circuit design provides both very high speed operation and the ability to drive large capacitive loads. The device accepts standard TTL/DTL outputs and converts them to MOS logic levels. They may be driven from standard 54/74 series and 54S/74S series gates and flip-flops or from drivers such as the DS8830 or DM7440. The DS0026 and DS0056 are intended for applications in which the output pulse width is logically controlled; i.e., the output pulse width is equal to the input pulse width.

The DS0026/DS0056 are designed to fulfill a wide variety of MOS interface requirements. As a MOS clock driver for long silicon-gate shift registers, a single device can drive over 10k bits at 5 MHz. Six devices provide input address and precharge drive for a 8k by 16-bit 1103 RAM memory system. Information on the correct usage of the DS0026 in these as well as other systems is included in the application note AN-76A.

The DS0026 and DS0056 are identical except each driver in the DS0056 is provided with a V_{BB} connection to supply a higher voltage to the output stage. This aids in pulling up the output when it is in the high state. An external resistor tied between these extra pins and a supply higher than V^+ will cause the output to pull up to $(V^+ - 0.1V)$ in the off state.

For DS0056 applications, it is required that an external resistor be used to prevent damage to the device when the driver switches low. A typical V_{BB} connection is shown on the next page.



These devices are available in 8-lead TO-5, one watt copper lead frame 8-pin mini-DIP, and one and a half watt ceramic DIP, and TO-8 packages.

features

- Fast rise and fall times—20 ns with 1000 pF load
- High output swing—20V
- High output current drive—±1.5 amps
- TTL/DTL compatible inputs
- High rep rate—5 to 10 MHz depending on power dissipation
- Low power consumption in MOS "0" state—2 mW
- Drives to 0.4V of GND for RAM address drive

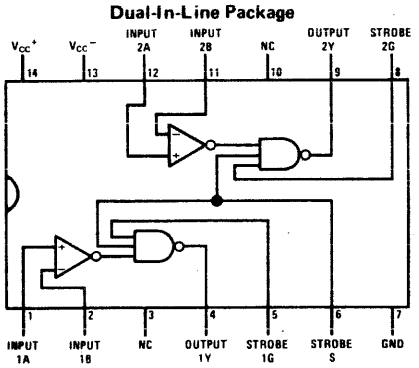
DS1603/DS3603, DS3604, DS55107/DS75107, DS55108/DS75108, DS75207, DS75208 dual line receivers

general description



The nine products described herein are TTL compatible dual high speed circuits intended for sensing in a broad range of system applications. While the primary usage will be for line receivers or MOS sensing, any of the products may effectively be used as voltage comparators, level translators, window detectors, transducer preamplifiers, and in other sensing applications. As digital line receivers the products are applicable with the DS55109/DS75109 and DS55110/DS75110 companion drivers, or may be used in other balanced or unbalanced party-line data transmission systems. The improved input sensitivity and delay specifications of the DS75207, DS75208 and DS3604 make them ideal for sensing high performance MOS memories as well as high sensitivity line receivers and voltage comparators. TRI-STATE® products enhance bused organizations.

features

- Diode protected input stage for power "OFF" condition
- 17 ns typ high speed
- TTL compatible
- ±10 mV or ±25 mV input sensitivity
- ±3V input common-mode range
- High input impedance with normal V_{CC}, or $V_{CC} = 0V$
- Strobes for channel selection
- TRI-STATE outputs for high speed buses
- Dual circuits
- Sensitivity gntd. over full common-mode range
- Logic input clamp diodes—meets both "A" and "B" version specifications
- ±5V standard supply voltages

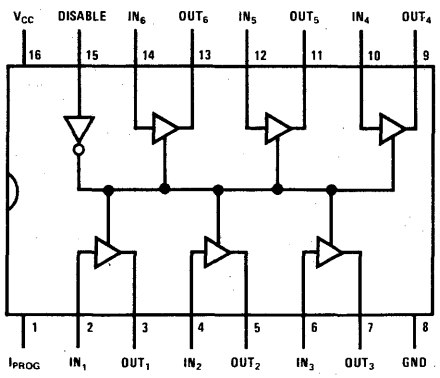
DS1605/DS3605, DS1606/DS3606, DS1607/DS3607, DS1608/DS3608 hex MOS sense amplifiers (MOS to TTL converters)

general description

The DS3605 series is a new series of programmable hex MOS sense amplifiers featuring high speed direct MOS sense capability with high impedance states to allow use of a common bus line. The DS1605/DS3605 and the DS1606/DS3606 have TRI-STATE® outputs. The DS1607/DS3607 and DS1608/DS3608 have both TRI-STATE inputs and outputs. High impedance states are controlled by an enable input.

Input current threshold (the level at which the output changes state) is determined by the current at the programming pin. The current threshold is 100μA with the programming pin grounded and 250μA with the pin unconnected. The threshold can be set from 100μA to 300μA by connecting a resistor from the pin to ground, and set above 300μA by connecting a resistor from the pin to the positive supply.



Outputs are high current drivers capable of sinking 50 mA in the low state and sourcing 5 mA in the high state.

features

- Non-inverting inputs (DS1605/DS3605, DS1607/DS3607)
- Inverting inputs (DS1606/DS3606, DS1608/DS3608)
- No external components required (direct MOS sensing)
- Programmable input thresholds
- Current sensing—100μA minimum
- 50 mA drive capability
- TRI-STATE control
- Single 5V supply
- 15 ns typical propagation delay (DS3605)

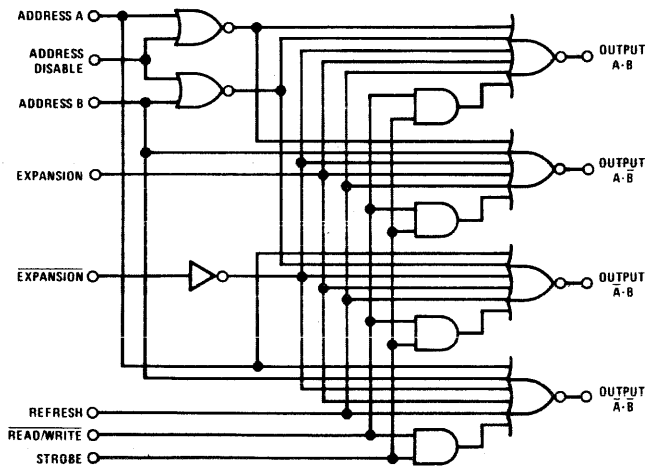
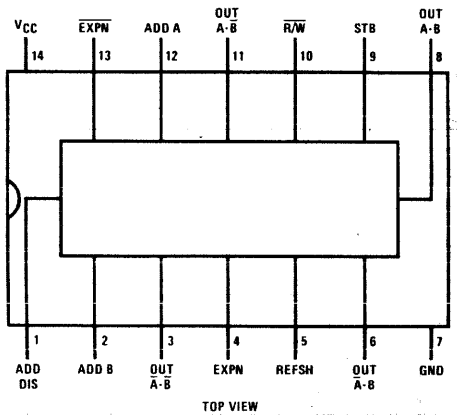
DS1640/DS3640, DS1670/DS3670 quad MOS TRI-SHARE™ port drivers general description

The DS1640/DS3640 and DS1670/DS3670 are quad MOS TRI-SHARE port drivers with outputs designed to drive large capacitive loads up to 500 pF associated with MOS memory systems. PNP input transistors are employed to reduce input current, allowing the large fan-out to these drivers needed in memory systems. The circuit has Schottky-clamped transistor logic for minimum propagation delay.



The DS1640/DS3640 has a 15 Ω resistor in series with the outputs to dampen transients caused by the fast switching output circuit. The DS1670/DS3670 has a direct, low impedance output source for use with or without an external resistor.

The DS1640/DS1670 has two address inputs which decode to one-of-four-high outputs. Provisions are made for address expansion. For example, two packages may be used to implement a three-input, eight-output decoder. Also included is a refresh control, read/write, and strobe input. These functions are required by the MM5270 4k TRI-SHARE MOS RAM.



features

- TRI-SHARE port driver for MM5270 RAM
- TTL/DTL compatible inputs
- PNP inputs minimize loading
- Capacitance-driving outputs
- Built-in damping resistor (DS1640/DS3640)

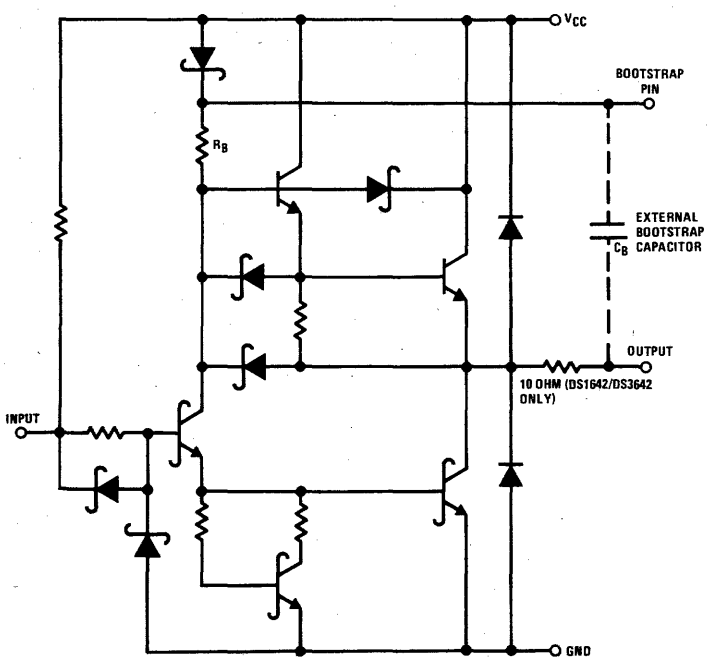
DS1642/DS3642, DS1672/DS3672
dual bootstrapped TTL to MOS clock drivers

general description

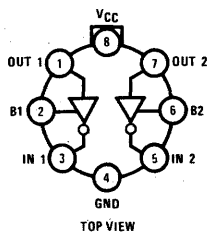
The DS1672 is a dual bipolar-to-MOS clock driver designed to provide high output current and voltage capabilities necessary for driving high capacitance (up to 500 pF) MOS memory systems. The circuit needs only one power supply, (12V typical). This feature greatly reduces high stand-by power levels and at the same time simplifies system deisgn.

The circuit also features output bootstrapping, eliminating the need for an additional supply to provide a higher voltage to the output stage. The function is accomplished by connecting a small value capacitor (typically 200 pF) from the output to the bootstrap pin on each driver.



The circuit has Schottky-clamped transistor logic for minimum propagation delay. Typical stand-by power (output low) is 48 mW per driver. A fail-safe condition is provided in the circuit, so if the input is opened the output assumes the logic "0" state.

The DS1642/DS3642 has a 10 Ω resistor in series with each output to dampen transients caused by the fast-switching output. The DS1672/DS3672 has a direct low impedance output for use with or without an external resistor.



features

- High output voltage capability 13.2V
- TTL/DTL compatible inputs
- High speed operation
- Bootstrapping eliminates extra supplies—reduces power
- Low stand-by power 48 mW/driver
- Built-in 10 Ω damping resistor (DS1642/DS3642)

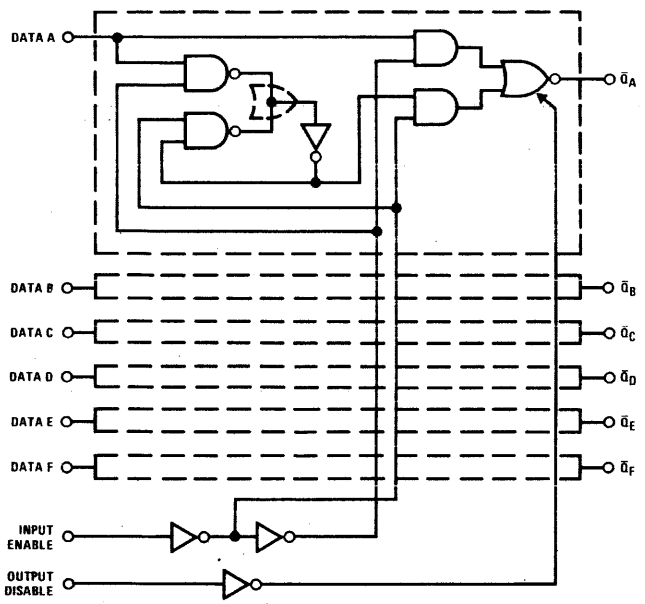
DS1645/DS3645, DS1675/DS3675 hex TRI-STATE® TTL to MOS latch/drivers

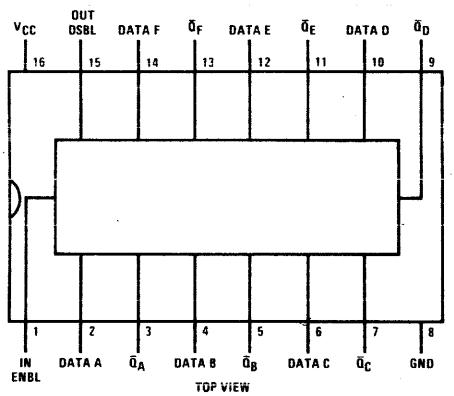
general description

The DS1645/DS3645 and DS1675/DS3675 are hex MOS latch/drivers with outputs designed to drive large capacitive loads up to 500 pF associated with MOS memory systems. PNP input transistors are used to reduce input currents, allowing the large fan-out to these drivers needed in memory systems. The circuit has Schottky-clamped transistor logic for minimum propagation delay, and TRI-STATE® outputs which allow bus operation.



The DS1645/DS3645 has a 15 Ω resistor in series with the outputs to dampen transients caused by the fast switching output circuit. The DS1675/DS3675 has a direct, low impedance output for use with or without an external resistor.

The circuit employs a fall-through-latch which captures the data in parallel with the output, thereby eliminating the delay normally encountered in other latch circuits. The DS1645/DS3645 and DS1675/DS3675 may be used for input address lines or input/output data lines of a MOS memory system.



features

- TTL/DTL compatible inputs
- PNP inputs minimize loading
- Capacitance-driving outputs
- TRI-STATE outputs
- Built-in damping resistor (DS1645/DS3645)

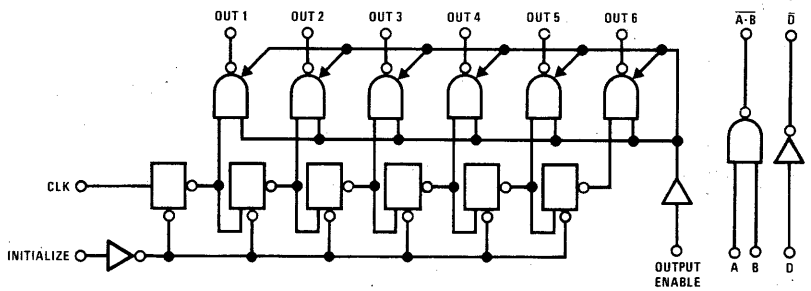
DS1646/DS3646, DS1676/DS3676 6-bit TRI-STATE® MOS refresh counter/driver

general description

The DS1646/DS3646 and DS1676/DS3676 are 6-bit refresh counters with outputs designed to drive large capacitive loads up to 500 pF associated with MOS memory systems. PNP input transistors are employed to reduce input currents. The circuit has Schottky-clamped transistor logic for minimum propagation delay, and TRI-STATE outputs allow it to be used on common data buses.

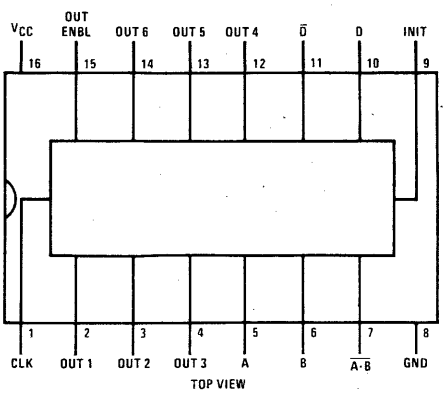
The DS1646/DS3646 has a 15Ω resistor in series with the outputs to dampen transients caused by the fast switching output circuit. The DS1676/DS3676 has a direct, low impedance output, for use with or without an external resistor.



The counter uses as its input the RAM clock signal, and with each clock input, it advances the count by one, thus generating a new refresh address.

Extra pins in the package are used for a 2-input NAND gate and a 2-input NOR gate, both of which have capacitive drive outputs.

features



- Circuit counts when clock goes high
- TTL/DTL compatible inputs
- PNP inputs minimize loading
- Capacitance-driver outputs
- TRI-STATE outputs
- Extra gates on unused pins
- Built-in damping resistor (DS1646/DS3646)
- Initialize input

typical application

The DS1646/DS3646 and DS1676/DS3676 have TRI-STATE outputs which can be tied to the outputs of another TRI-STATE driver. The refresh counter can control the address lines into a memory array during a short refresh cycle, and then return to the high-impedance state to allow the primary driver to control the address lines.

*Specifications may change.

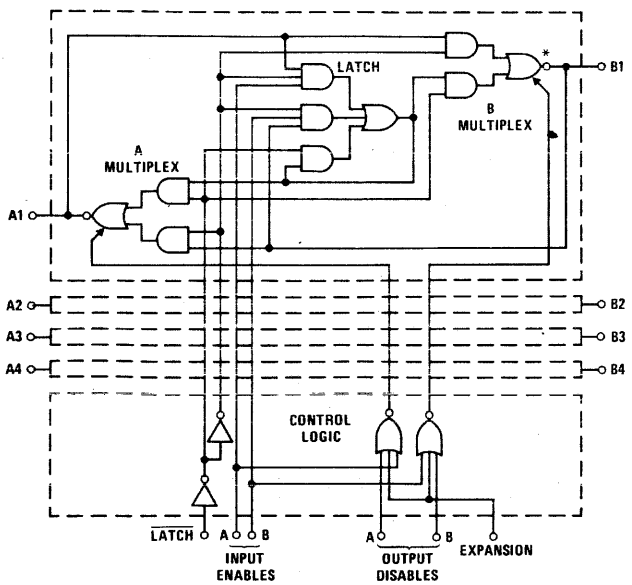
DS1647/DS3647, DS1677/DS3677, DS16147/DS36147, DS16177/DS36177 quad TRI-STATE® MOS memory I/O registers

general description

The DS1647/DS3647 series are 4-bit I/O buffer registers intended for use in MOS memory systems. The circuits employ a fall-through latch for data storage. This method of latching captures the data in parallel with the output, thus eliminating the delays encountered in other designs. The circuits use Schottky-clamped transistor logic for minimum propagation delay and employ PNP input transistors so that input currents are low, allowing large fan-out to these circuits needed in a memory system.

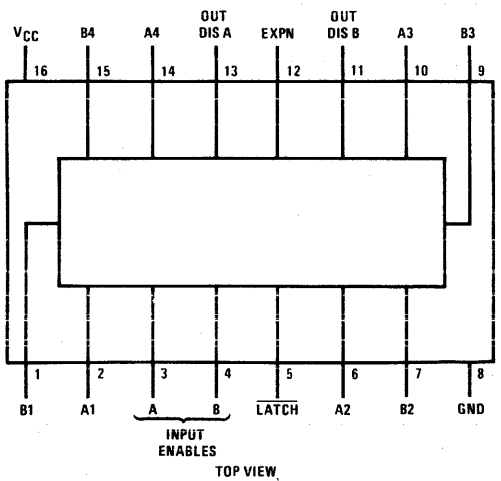
Two pins per bit are provided, and data transfer is bi-directional so that the register can handle both input and output data. The direction of data flow is controlled through the input enables. The latch control, when taken low, will cause the register to hold the data present at that time and display it at the outputs. Data can be latched into the register independent of the output disables or EXPANSION input. Either or both of the outputs may be taken to the high-impedance state with the output disables. The EXPANSION pin disables both outputs to facilitate multiplexing with other I/O registers on the same data lines.



The "B" port outputs in the DS16147/DS36147 and DS16177/DS36177 are open collectors, and in the DS1647/DS3647 and DS1677/DS3677 they are TRI-STATE. The "B" port outputs are also designed for use in bus organized data transmission systems and can sink 50 mA and source −5.2 mA. The "A" port outputs in all four types are TRI-STATE.

Data going from port "A" to port "B" is inverted in the DS1647/DS3647 and DS16147/DS36147 and is not inverted in the DS1677/DS3677 and DS16177/DS36177. Data going from port "B" to port "A" is inverted in all four types.

features



- PNP inputs minimize loading
- Fall-through latch design
- High speed circuitry
- TRI-STATE outputs
- EXPANSION control
- Bi-directional data flow
- TTL/DTL compatible
- Transmission line driver output

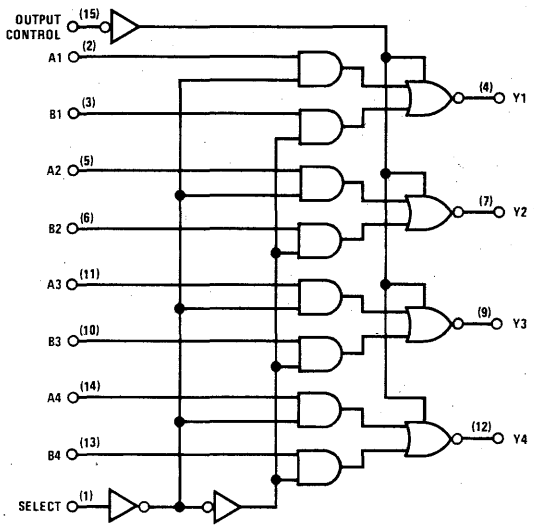
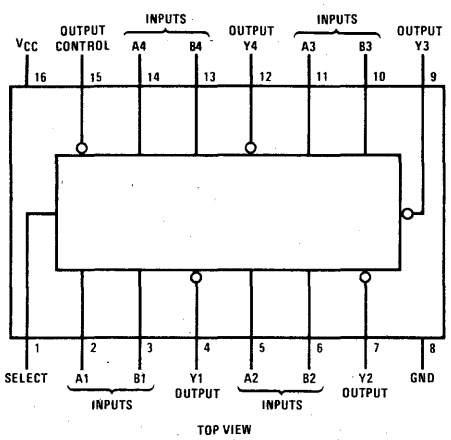
DS1648/DS3648, DS1678/DS3678
TRI-STATE® TTL to MOS multiplexer/drivers

general description



The DS1648/DS3648 and DS1678/DS3678 are quad 2-input multiplexers with TRI-STATE outputs designed to drive the large capacitive loads (up to 500 pF) associated with MOS memory systems. A PNP input structure is employed to minimize input currents so that driver loading in large memory systems is reduced. The circuit employs Schottky-clamped transistors for high speed and TRI-STATE outputs for bus operation.

The DS1648/DS3648 has a 15 Ω resistor in series with the outputs to dampen transients caused by the fast-switching output. The DS1678/DS3678 has a direct, low impedance output for use with or without an external resistor.



features

- TRI-STATE outputs interface directly with system bus
- Schottky-clamped for better ac performance
- PNP inputs to minimize input loading
- DTL and TTL compatible
- High-speed capacitive load drivers
- Built-in damping resistor (DS1648/DS3648 only)

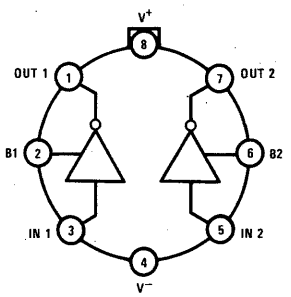
DS1671/DS3671 bootstrapped two phase MOS clock driver

general description

The DS1671/DS3671 is a high speed dual MOS clock driver and interface circuit. Unique circuit design provides both very high speed operation and the ability to drive large capacitive loads. The device accepts standard TTL/DTL outputs and converts them to MOS logic levels. It may be driven from standard 54/74 and 54S/74S series gates and flip-flops or from drivers such as the DS8830 or DM7440. The circuit can be used in both P-channel and N-channel MOS memory system drive applications.

The DS1671/DS3671 is intended to fulfill a wide variety of MOS interface requirements. As a MOS clock driver for long silicon gate shift registers, a single device can drive over 10k bits at 5 MHz. Six devices provide input address and precharge drive for an 8k by 16-bit 1103 RAM memory system.



Each driver uses output bootstrapping to provide a higher voltage to the output stage, thus eliminating the need for an additional V_{DD} supply. The bootstrapping function is accomplished by connecting a small value capacitor (typically 200 pF) from each output to each drivers bootstrap node.

features

- Fast rise and fall times—20 ns with 1000 pF load
- High output swing—20V
- High output current drive—±1.5A
- TTL/DTL compatible inputs
- High rep rate—5 to 10 MHz depending on power dissipation
- Low power consumption in MOS "0" state—2 mW
- Swings to 0.4V of GND for RAM address drive

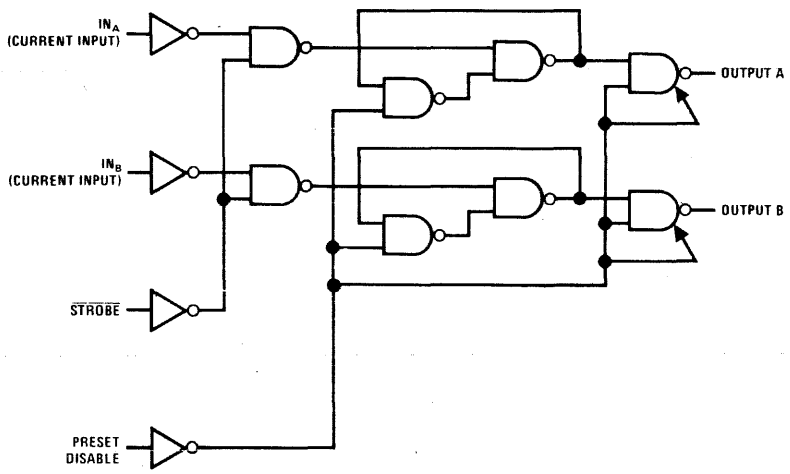
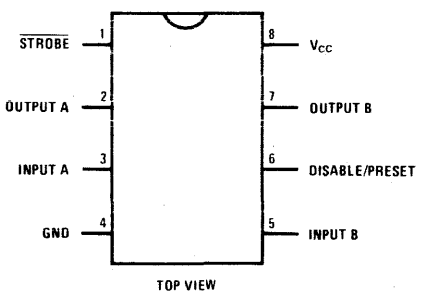
DS3625 dual high speed MOS sense amp



general description

The DS3625 is a dual high speed MOS to TTL level converter. It acts as an interface level converter between MOS and TTL logic devices. It consists of two 1-input converters with common strobe input to inhibit "0" entry when strobe is high. It allows parallel entry when strobe is low and the internal latch is preset by the common preset input. TRI-STATE® output logic is implemented in this circuit to facilitate high speed time sharing of decoder-drivers, fast random-access (or sequential) memory arrays, etc.



features

- Easily interfaces with most popular 1k and 2k dynamic MOS RAMs
- Pin-for-pin replacement for the 8T25
- Very low output impedance — high drive ability
- High impedance output state which allows many outputs to be connected to a common bus line
- Average power dissipation 110 mW per converter

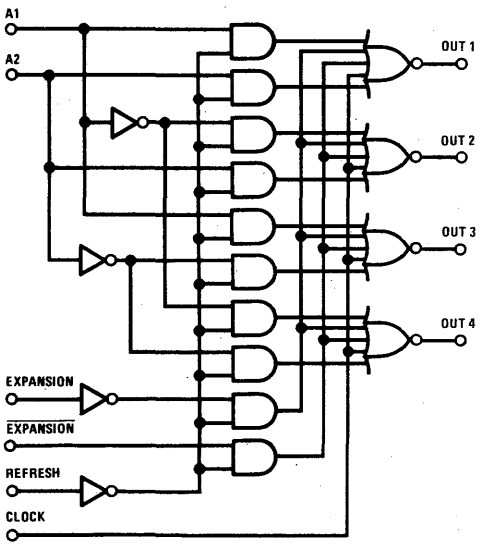
DS3643, DS3673 decoded quad MOS clock drivers

general description

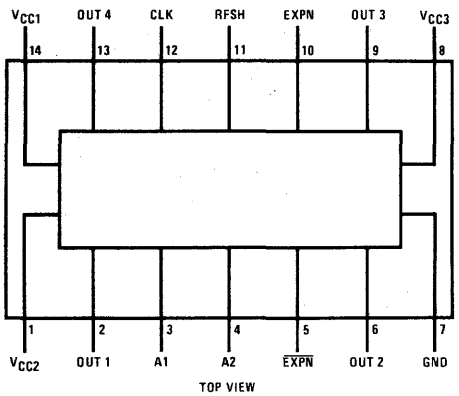
The DS3643 and DS3673 are quad bipolar-to-MOS decoder/clock drivers with TTL/DTL compatible inputs. They are designed to provide high output current and voltage capabilities necessary for optimum driving of high capacitance N-channel MOS memory systems.

The device features full decoding of input address lines from two inputs to one of four outputs. Also featured is the capability of expanding to three inputs to one of eight outputs with the use of the Expansion and $\overline{\text{Expansion}}$ inputs. Also included are clock and refresh inputs.



The circuit was designed for driving large capacitive loads at high speeds and uses Schottky-clamped transistors. PNP transistors are used on all inputs, thereby minimizing input loading.

The DS3643 has a 10 Ω damping resistor in series with each output to dampen transients caused by the fast switching output, while the DS3673 has a direct, low impedance output, for use with or without an external resistor.



features

- TTL/DTL compatible inputs
- Operates from standard bipolar and MOS supplies
- PNP inputs minimize input loading
- Full logic decoding for either two inputs to one of four outputs or three inputs to one of eight outputs
- High voltage/current outputs
- Input and output clamping diodes
- Control logic optimized for use with MOS memory systems
- Built-in damping resistors (DS3643)

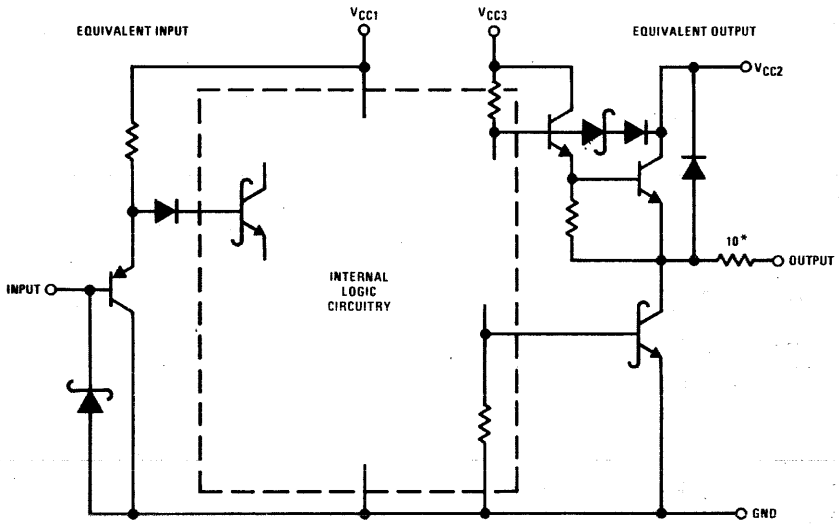
DS3644, DS3674 quad TTL to MOS clock drivers general description

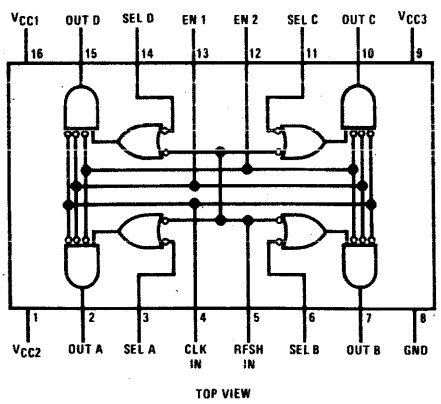
The DS3644 and DS3674 are quad bipolar-to-MOS clock drivers with TTL/DTL compatible inputs. They are designed to provide high output current and voltage capabilities necessary for optimum driving of high capacitance N-channel MOS memory systems.



The device features two common enable inputs, a refresh input, and a clock control input for simplified system designs. The circuit was designed for driving highly capacitive loads at high speeds and uses Schottky-clamped transistors. PNP transistors are used on all inputs thereby minimizing input loading.

The DS3644 contains a 10 Ω resistor in series with each output to dampen the transients caused by the fast-switching output, while the DS3674 has a direct, low impedance output for use with or without an external damping resistor.

features



- TTL/DTL compatible inputs
- Operates from standard bipolar and MOS supplies
- PNP inputs minimize loading
- High voltage/current outputs
- Input and output clamping diodes
- Control logic optimized for use with MOS memory systems
- Pin and function compatible with MC3460 and 3235

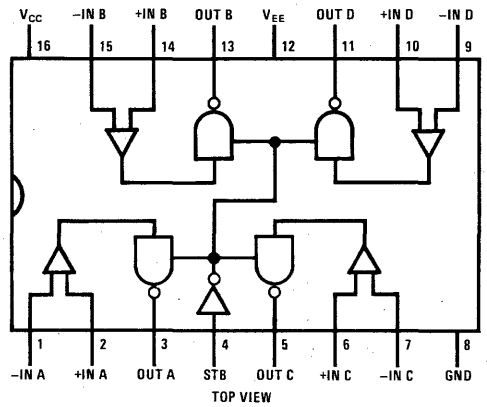
DS3651, DS3653 quad high speed MOS sense amplifiers

general description

The DS3651 and DS3653 are TTL compatible high speed circuits intended for sensing in a broad range of MOS memory system applications. Switching speeds have been enhanced over conventional sense amplifiers by application of Schottky technology, and TRI-STATE® strobing is incorporated offering a high impedance output state for bused organization.



The DS3651 has active pull-up outputs, and the DS3653 offers open collector outputs providing implied "AND" operations.

features

- High speed — 15 ns (typ)
- TTL compatible
- Input sensitivity — ±7 mV
- TRI-STATE outputs for high speed buses
- Standard supply voltages — ±5V
- Pin and function compatible with MC3430 and MC3432

X = Indeterminate State

typical applications

A Typical MOS Memory Sensing Application for a 4k word by 4-bit memory arrangement employing 1103 type memory devices

Note: Only four devices are required for a 4k word by 16-bit memory system.

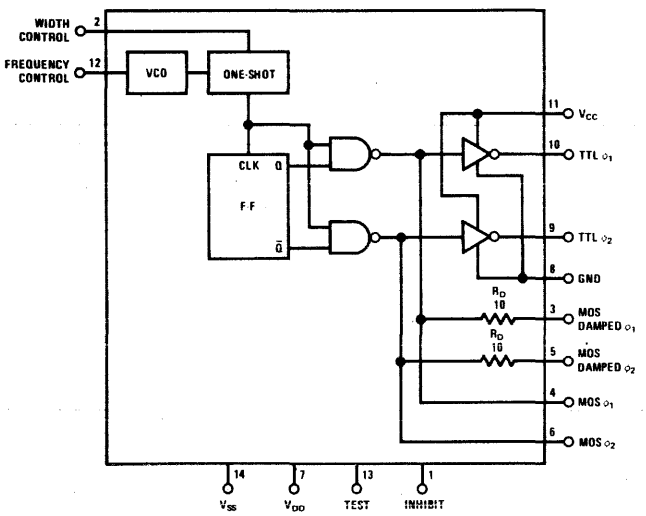
*Specifications may change

Interface

DS7803/DS8803, DS8813 two phase oscillator/clock driver

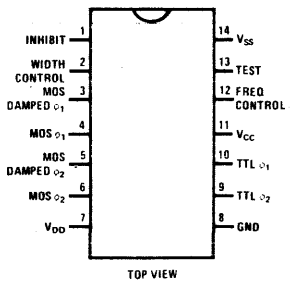
general description

The DS7803 is a self contained two phase oscillator/clock driver. It requires no external components to generate one of three primary oscillator frequencies and pulse widths. Other frequencies can easily be obtained by programming input voltages. Three sets of outputs are provided: damped and undamped MOS outputs and TTL monitor outputs. The MOS outputs easily drive 500 pF loads with less than 150 ns rise and fall times. In addition the outputs have current limiting to protect against momentary shorts to the supplies.



The DS7803 and DS8803 are available in a 14-lead cavity DIP. The DS8803 is also available in a 14-pin molded DIP. The DS8813 comes in an 8-pin molded DIP, providing damped MOS outputs only.

features



- Two phase non-overlapping outputs
- No external timing components required
- Frequency adjustable from 100 kHz to 500 kHz
- Pulse width adjustable from 260 ns to 1.4μs
- Damped and undamped MOS outputs
- TTL monitor outputs

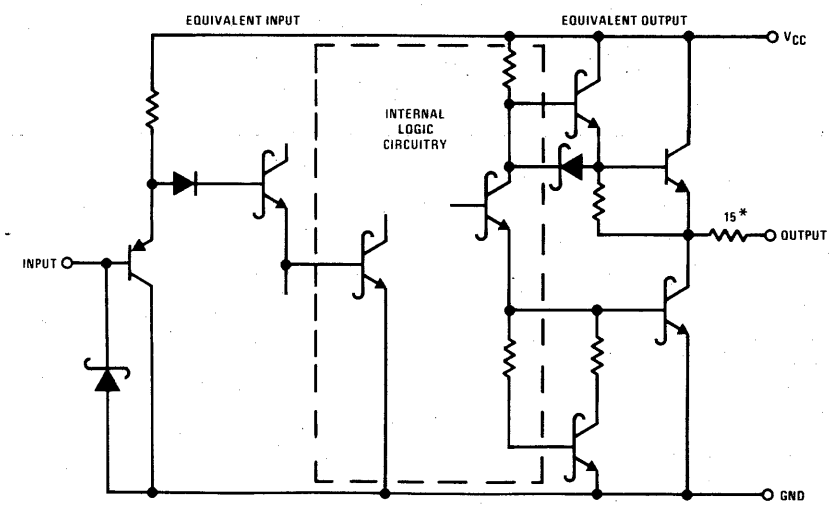
DS16149/DS36149, DS16179/DS36179 hex MOS drivers

general description

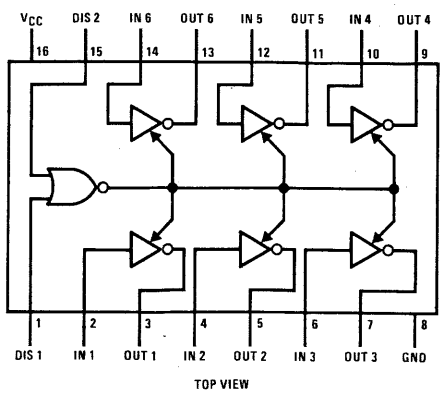


The DS16149/DS36149 and DS16179/DS36179 are Hex MOS drivers with outputs designed to drive large capacitive loads up to 500 pF associated with MOS memory systems. PNP input transistors are employed to reduce input currents allowing the large fan-out to these drivers needed in memory systems. The circuit has Schottky-clamped transistor logic for minimum propagation delay, and a disable control that places the outputs in the logic "1" state (see truth table). This is especially useful in MOS RAM applications where a set of address lines has to be in the logic "1" state during refresh.

The DS1649/DS3649 has a 15 Ω resistor in series with the outputs to dampen transients caused by the fast-switching output. The DS1679/DS3679 has a direct low impedance output for use with or without an external resistor.

features

- High speed capabilities
  - Typ 9 ns driving 50 pF
  - Typ 29 ns driving 500 pF
- TRI-STATE outputs for data bussing
- Built-in 15 Ω damping resistor (DS16149/DS36149)
- Same pin-out as DM8096 and DM74366



schematic diagram

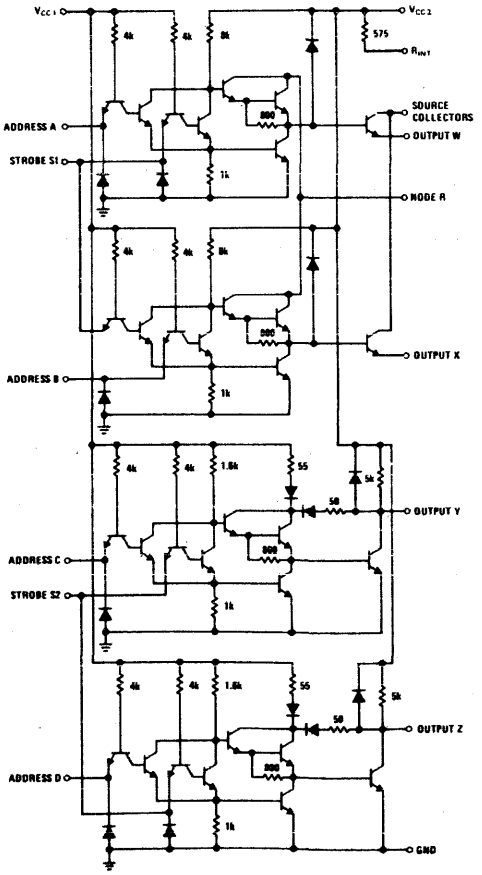
DS55325/DS75325 memory drivers general description

The DS55325 and DS75325 are monolithic memory drivers which feature high current outputs as well as internal decoding of logic inputs. These circuits are designed for use with magnetic memories.

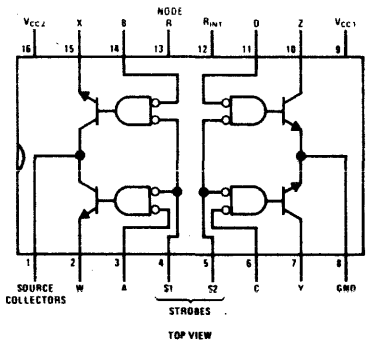
The circuit contains two 600 mA sink-switch pairs and two 600 mA source-switch pairs. Inputs A and B determine source selection while the source strobe (S_1) allows the selected source turn on. In the same manner, inputs C and D determine sink selection while the sink strobe (S_2) allows the selected sink turn on.

Sink-output collectors feature an internal pull-up resistor in parallel with a clamping diode connected to V_{CC2}. This protects the outputs from voltage surges associated with switching inductive loads.



The source stage features Node R which allows extreme flexibility in source current selection by controlling the amount of base drive to each source transistor. This method of setting the base drive brings the power associated with the resistor outside the package thereby allowing the circuit to operate at higher source currents for a given junction temperature. If this method of source current setting is not desired, then Nodes R and R_{INT} can be shorted externally activating an internal resistor connected from V_{CC2} to Node R. This provides adequate base drive for source currents up to 375 mA with V_{CC2} = 15V or 600 mA with V_{CC2} = 24V.

The DS55325 operates over the fully military temperature range of −55°C to +125°C, while the DS5325 operates from 0°C to +70°C.



features

- 600 mA output capability
- 24V output capability
- Dual sink and dual source outputs
- Fast switching times
- Source base drive externally adjustable
- Input clamping diodes
- DTL/TTL compatible

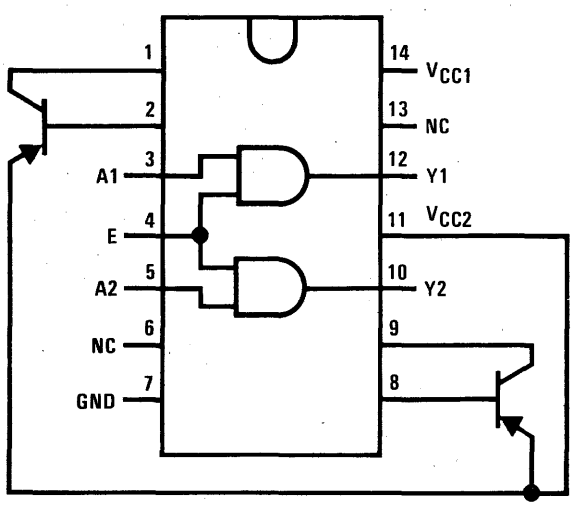
DS75322 dual TTL-to-MOS driver

general description

The DS75322 is a monolithic integrated dual TTL-to-MOS driver and interface circuit. The device has separate driver address inputs with common strobe. The device accepts standard TTL and DTL input signals and provides high-current and high-voltage output levels suitable for driving MOS circuits. The DS75322 is designed for driving N-channel RAMs where low power dissipation is desirable when the driver output is in the low state. It may be used to drive the chip-enable clock of 4096-bit dynamic MOS RAM components.

The DS75322 requires two external PNP transistors per package.



The DS75322 operates from the TTL 5V supply and the MOS V_{DD} supply. With the use of an external pull-down resistor, the driver output of the DS75322 will be forced to the low state upon loss of the 5V supply.

features

- Operates from standard bipolar and MOS supply voltages
- High speed switching
- TTL and DTL compatible inputs
- Separate driver address inputs with common strobe
- V_{OH} and V_{OL} compatible with 4k RAMs
- No 12V supply current (except leakage) when output in low state
- Low 5V supply supply current when output in low state
- Output in high impedance state upon loss of 5V supply
- Requires 2 external PNPs per package for operation

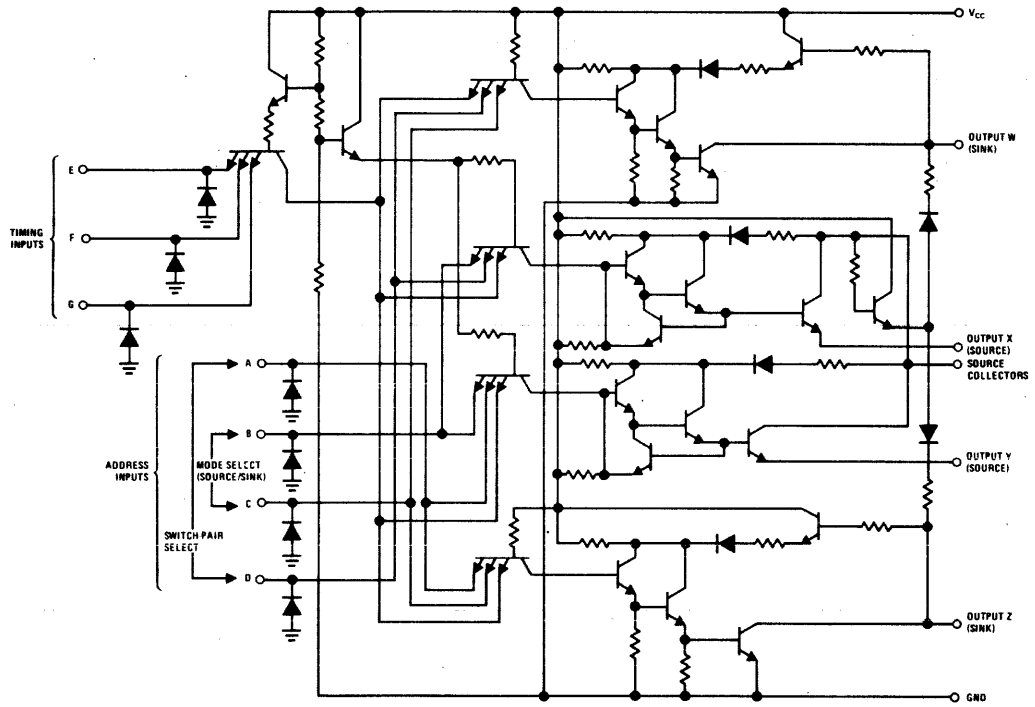
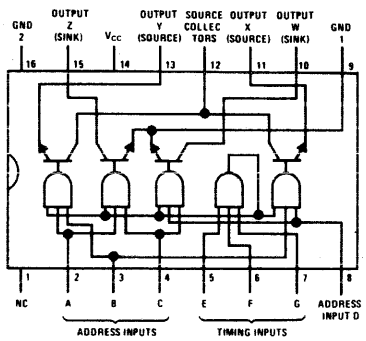
DS75324 memory driver with decode inputs



general description

The DS75324 is a monolithic memory driver which features two 400 mA (source/sink) switch pairs along with decoding capability from four address lines. Inputs B and C function as mode selection lines (source or sink) while lines A and D are used for switch-pair selection (output pair Y/Z or W/X).



features

- High voltage outputs
- Dual sink/source outputs
- Internal decoding and timing circuitry
- 400 mA output capability
- DTL/TTL compatible
- Input clamping diodes

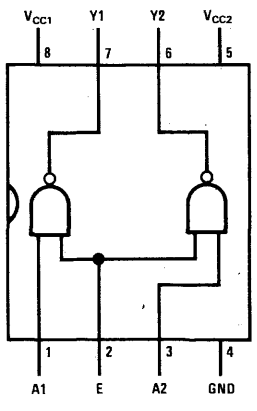
DS75361 dual TTL-to-MOS driver

general description

The DS75361 is a monolithic integrated dual TTL-to-MOS driver interface circuit. The device accepts standard TTL and DTL input signals and provides high-current and high-voltage output levels for driving MOS circuits. It is used to drive address, control, and timing inputs for several types of MOS RAMs including the 1103 and MM5270 and MM5280



The DS75361 operates from standard TTL 5V supplies and the MOS V_{SS} supply in many applications. The device has been optimized for operation with V_{CC2} supply voltage from 16V to 20V; however, it is designed for use over a much wider range of V_{CC2}.

features

- Capable of driving high-capacitance loads
- Compatible with many popular MOS RAMs
- V_{CC2} supply voltage variable over wide range to 24V
- Diode-clamped inputs
- TTL and DTL compatible
- Operates from standard bipolar and MOS supplies
- High-speed switching
- Transient overdrive minimizes power dissipation
- Low standby power dissipation

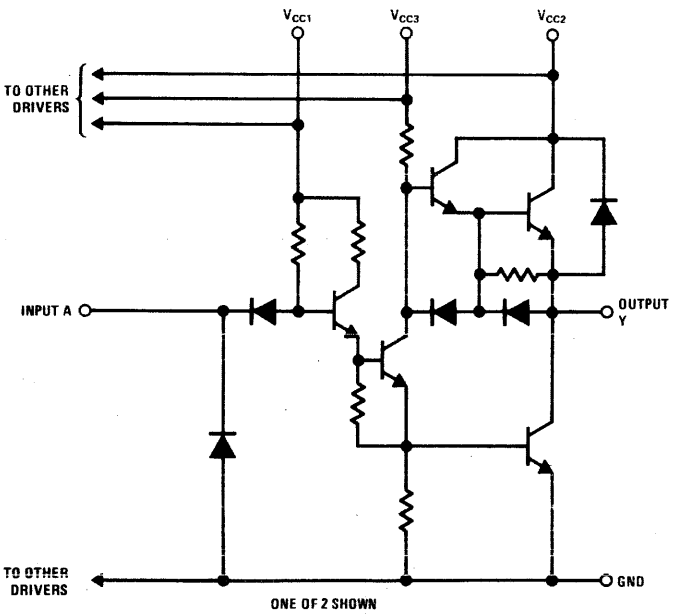
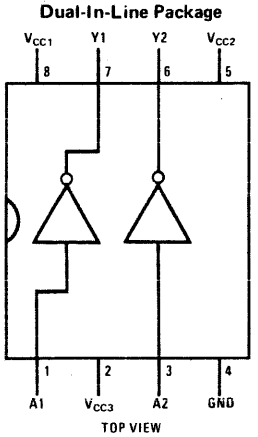
DS75362 dual TTL-to-MOS driver

general description



The DS75362 is a dual monolithic integrated TTL-to-MOS driver and interface circuit that accepts standard TTL and DTL input signals and provides high-current and high-voltage output levels suitable for driving MOS circuits. It is used to drive address, control, and timing inputs for several types of MOS RAMs including the 1103.

The DS75362 operates from the TTL 5V supply and the MOS V_{SS} and V_{BB} supplies in many applications. This device has been optimized for operation with V_{CC2} supply voltage from 16V to 20V, and with nominal V_{CC3} supply voltage from 3V to 4V higher than V_{CC2}. However, it is designed so as to be usable over a much wider range of V_{CC2} and V_{CC3}. In some applications the V_{CC3} power supply can be eliminated by connecting the V_{CC3} pin to the V_{CC2} pin.



features

- Dual positive-logic NAND TTL-to-MOS driver
- Versatile interface circuit for use between TTL and high-current, high-voltage systems
- Capable of driving high-capacitance loads
- Compatible with many popular MOS RAMs
- V_{CC2} supply voltage variable over wide range to 24V maximum
- V_{CC3} supply voltage pin available
- V_{CC3} pin can be connected to V_{CC2} pin in some applications
- TTL and DTL compatible diode-clamped inputs
- Operates from standard bipolar and MOS supply voltages
- High-speed switching
- Transient overdrive minimizes power dissipation
- Low standby power dissipation

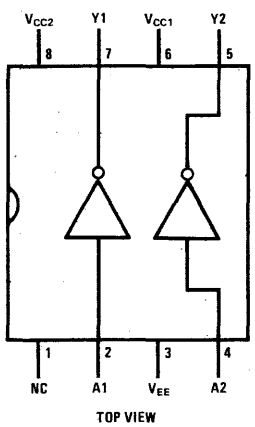
DS75364 dual MOS clock driver

general description

The DS75364 is a dual MOS driver and interface circuit that operates with either current source or voltage source input signals. The device accepts signals from TTL levels or other logic systems and provides high current and high voltage output levels suitable for driving MOS circuits. It may be used to drive address, control and/or timing inputs for several types of MOS RAMs and MOS shift registers.

The DS75364 operates from standard MOS and bipolar supplies, and has been optimized for operation with V_{CC1} supply voltage from 12–20V positive with respect to V_{EE}, and with nominal V_{CC2} supply voltage from 3–4V more positive than V_{CC1}. However, it is designed so as to be useable over a much wider range of V_{CC1} and V_{CC2}. In some applications the V_{CC2} power supply can be eliminated by connecting the V_{CC2} pin to the V_{CC1} pin.

Inputs of the DS75364 are referenced to the V_{EE} terminal and contain a series current limiting resistor. The device will operate with either positive input current signals or input voltage signals which are positive with respect to V_{EE}. In many applications the V_{EE} terminal is connected to the MOS V_{DD} supply of −12V to −15V with the inputs to be driven from TTL levels or other positive voltage levels. The required negative level shifting may be done with an external PNP transistor current source or by use of capacitive coupling and appropriate input voltage pulse characteristics.



The DS75364 is characterized for operation over the 0°C to +70°C temperature range.

features

- Versatile interface circuit for use between TTL levels and level shifted high current, high voltage systems
- Inputs may be level shifted by use of a current source or capacitive coupling or driven directly by a voltage source
- Capable of driving high capacitance loads
- Compatible with many popular MOS RAMs and MOS shift registers
- V_{CC1} supply voltage variable over wide range to 22V maximum with respect to V_{EE}
- V_{CC2} pull-up supply voltage pin available
- Operates from standard bipolar and/or MOS supply voltages
- High-speed switching
- Transient overdrive minimizes power dissipation
- Low standby power dissipation

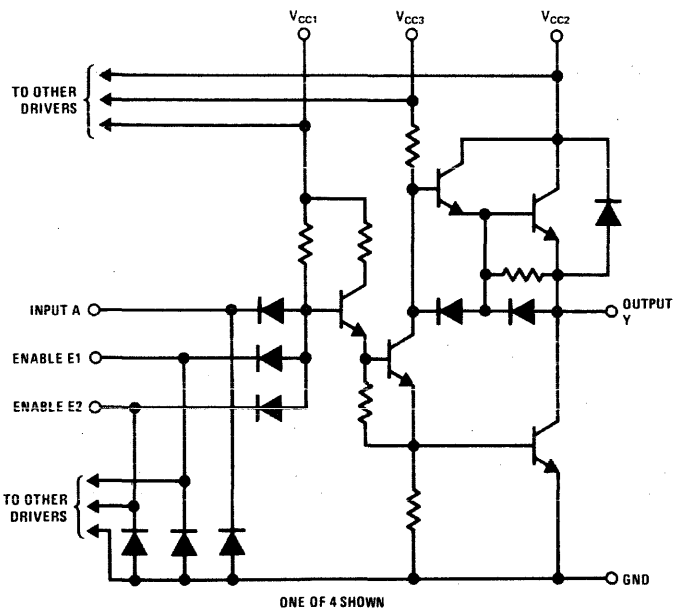
DS75365 quad TTL-to-MOS driver

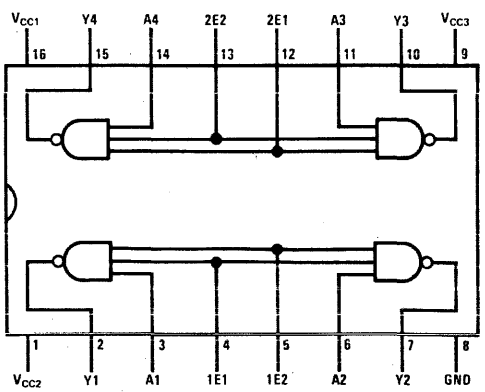
general description



The DS75365 is a quad monolithic integrated TTL-to-MOS driver and interface circuit that accepts standard TTL and DTL input signals and provides high-current and high-voltage output levels suitable for driving MOS circuits. It is used to drive address, control, and timing inputs for several types of MOS RAMs including the 1103.

The DS75365 operates from the TTL 5V supply and the MOS V_{SS} and V_{BB} supplies in many applications. This device has been optimized for operation with V_{CC2} supply voltage from 16V to 20V, and with nominal V_{CC3} supply voltage from 3V to 4V higher than V_{CC2}. However, it is designed so as to be usable over a much wider range of V_{CC2} and V_{CC3}. In some applications the V_{CC3} power supply can be eliminated by connecting the V_{CC3} pin to the V_{CC2} pin.

features



- Quad positive-logic NAND TTL-to-MOS driver
- Versatile interface circuit for use between TTL and high-current, high-voltage systems
- Capable of driving high-capacitance loads
- Compatible with many popular MOS RAMs
- Interchangeable with Intel 3207
- V_{CC2} supply voltage variable over wide range to 24V maximum
- V_{CC3} supply voltage pin available
- V_{CC3} pin can be connected to V_{CC2} pin in some applications
- TTL and DTL compatible diode-clamped inputs
- Operates from standard bipolar and MOS supply voltages
- Two common enable inputs per gate-pair
- High-speed switching
- Transient overdrive minimizes power dissipation
- Low standby power dissipation

ELECTRONIC DISTRIBUTORS MASTER CATALOG

First published to serve you in 1935, The Radio Electronic Master has continuously changed over the years to better meet your needs. Today The Radio Master has become The Electronic Distributors MASTER CATALOG.

The 1978 edition of The Electronic Distributors MASTER CATALOG includes components, systems and subsystems sold through distributors.

It encompasses the following product areas: electronic and electromechanical components, audio and communications equipment, subassembly and panel components, hardware, production equipment and tools, test instrumentation, power sources, wire and cable, and chemicals.

The MASTER CATALOG is divided into four basic sections:

The **GENERAL INDEX** lists manufacturers and products alphabetically, including product cross references. Page numbers are displayed for both manufacturers and products. Manufacturers names are **bold-faced.**

The **MANUFACTURERS' CATALOG SECTION** is a collection of their respective product pages, alphabetically by manufacturer, again including addresses and phone numbers.

The **MANUFACTURERS DIRECTORY** is an alphabetical listing of all manufacturers whose products information is shown. Page numbers are referenced. Sales offices, representatives and distributors are included for many manufacturers.

The **DEALER/DISTRIBUTOR DIRECTORY** geographically lists distribution outlets by state and city. The listings were supplied by manufacturers cataloging in this edition.

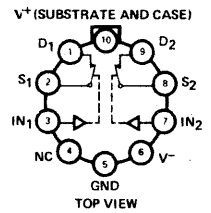
SERIES CMOS ANALOG SWITCHES

LATCHPROOF MONOLITHIC CMOS SWITCH WITH DRIVER

Description

The DG300 through DG307 switch family features four switching functions using CMOS technology for low and nearly constant ON resistance (less than 50 Ω) over the full analog signal range. In the ON condition the switches will conduct current in either direction with no offset voltage. With low power dissipation, (a few milliwatts for the DG300-303, a few hundred microwatts for the DG304-307), this series of switches becomes an ideal candidate for battery-powered or remote switching applications. The switching speed is among the fastest available with the low quiescent power dissipation. In the OFF condition, the switches will block voltages up to 30 V peak-to-peak. A logic input driver controls the ON/OFF state of the switches. (See the "Pin Configuration" for switch status with a logic "1" input.) The DG300-303 switches are TTL and CMOS input compatible and have a logic "0" state with an input less than 0.8 V and a logic "1" state with an input greater than 4.0 V. The DG304-307 switches are CMOS input compatible and have a logic "0" state with an input less than 3.5 V and a logic "1" state with an input greater than 11 V (for 15 V positive supply). The logic inputs are protected against overvoltage up to 18 V above and 36 V below the positive supply. The combination of low cost, low power, low resistance and fast speed optimizes system design.



Features

- **Analog Switching With Low Quiescent Power Consumption**
- **Impossible to Latch Up Under Any Circumstances**
- **±15 V Analog Signal Range With ±15 V Supplies**
- **$r_{DS} < 50\ \Omega$ Over Full Signal Range**
- **Fast Switching Speed – t_{on} = 150 ns Typ (DG300-303)**
  t_{on} = 110 ns Typ (DG304-307)
- **DG300-303 TTL, DTL, CMOS Input Compatible**
- **DG304-307 CMOS Input Compatible**
- **All Terminals Protected Against Static Electricity**
- **Logic Inputs Overvoltage Protected to 18 V Above or 36 V Below the Positive Supply**
- **Four Different Switch Functions to Give Optimum Flexibility**

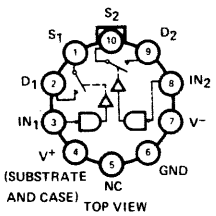
SERIES CMOS ANALOG SWITCHES

LATCHPROOF MONOLITHIC CMOS SWITCH WITH DRIVER

Description

The DG381 through DG390 switch family features four switching functions using CMOS technology for low and nearly constant ON resistance (less than 50 Ω) over the full analog signal range. In the ON condition the switches will conduct current in either direction with no offset voltage. With low power dissipation, a few milliwatts, this series of switches becomes an ideal candidate for battery-powered or remote switching applications. The switching speed is among the fastest available with the low quiescent power dissipation. In the OFF condition, the switches will block voltages up to 30 V peak-to-peak. A logic input driver controls the ON/OFF state of the switches. (See the "Pin Configuration" for switch status with a logic "1" input.) The switches are TTL and CMOS input compatible and have a logic "0" state with an input less than 0.8 V and a logic "1" state with an input greater than 4.0 V. The logic inputs are protected against overvoltage up to 18 V above and 36 V below the positive supply. The combination of low cost, low power, low resistance and fast speed optimizes system design.



Features

- **Pin for Pin Compatible with DG181-190 Series**
- **Analog Switching with Low Quiescent Power Consumption**
- **Impossible to Latch Up Under Any Circumstances**
- **±15 V Analog Signal Range with ±15 V Supplies**
- **$r_{DS} < 50\ \Omega$ Over Full Signal Range**
- **Fast Switching Speed – t_{on} = 150 ns Typ**
- **TTL, DTL, CMOS Input Compatible**
- **All Terminals Protected Against Static Electricity**
- **Logic Inputs Overvoltage Protected to 18 V Above or 36 V Below the Positive Supply**
- **Four Different Switch Functions to Give Optimum Flexibility**

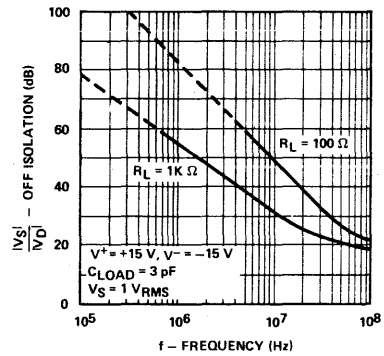
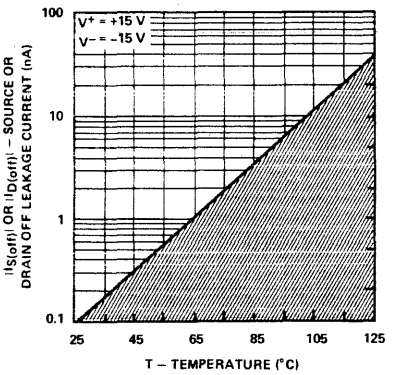
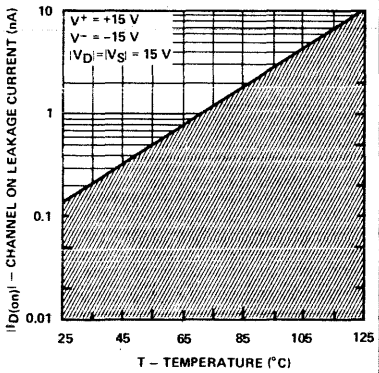
$r_{DS(on)}$ vs V_D and Power Supply Voltage



Device Power Dissipation vs Switching Frequency

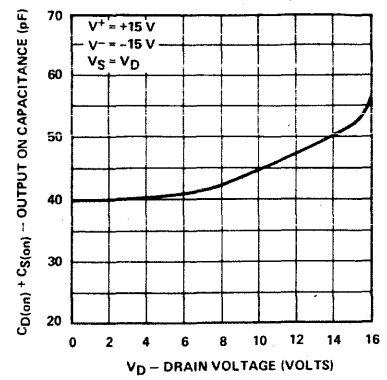


Single Logic Input

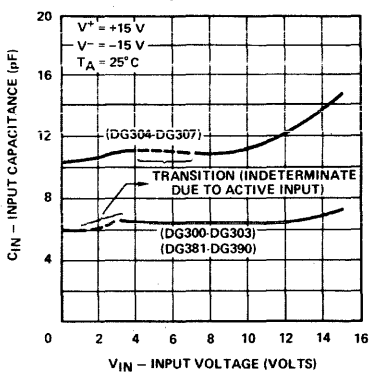


OFF Isolation vs Frequency

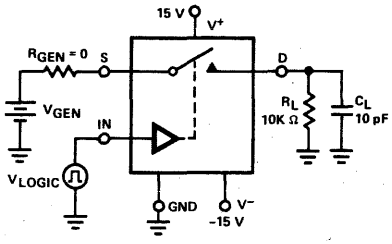
$I_{S(off)}$ or $I_{D(off)}$ vs Temperature*



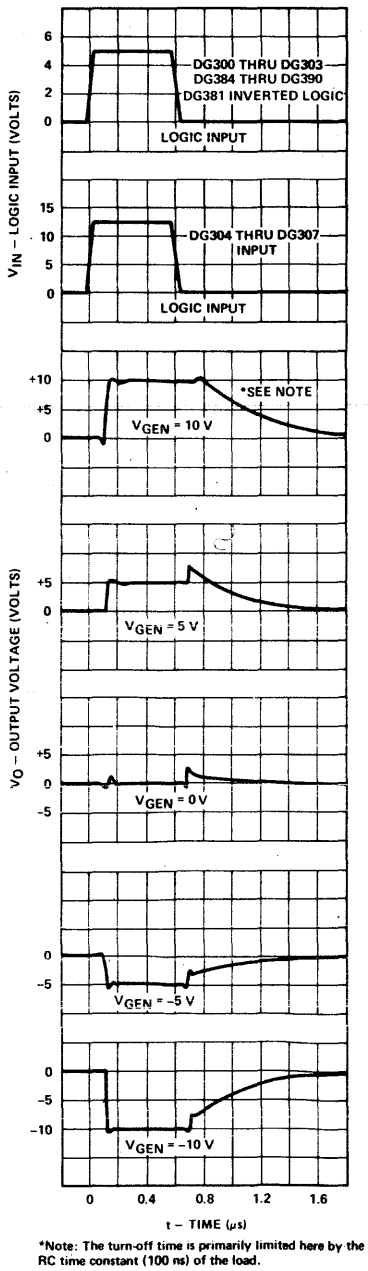
$I_{D(on)}$ vs Temperature*



*The net leakage into the source or drain is the n-channel leakage minus the p-channel leakage. This difference can be positive, negative, or zero depending on the analog voltage and temperature, and will vary greatly from unit to unit.



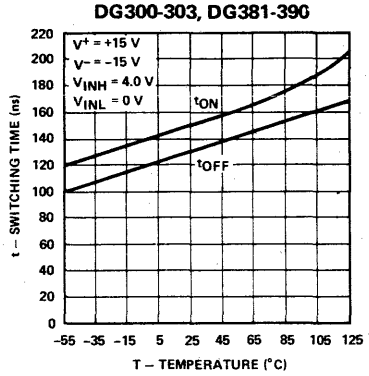
Output ON Capacitance vs Drain Voltage



Input Capacitance vs Input Voltage

Typical delay, rise, fall, settling times, and switching transients in this circuit.

If R_{GEN}, R_L or C_L is increased, there will be proportional increases in rise and/or fall RC times. Applying V_{GEN} to D rather than S results in much greater spikes.



*Note: The turn-off time is primarily limited here by the RC time constant (100 ns) of the load.

3 1/2 DIGIT A/D CONVERTER SETS

LD110/LD114 DIGITAL A/D PROCESSOR
LD111/LD111A ANALOG A/D PROCESSOR

Description

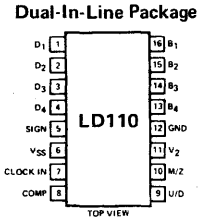
The PMOS LD110 synchronous digital processor combines the counting, storage and data multiplexing functions with the random logic necessary to control the quantized charge-balancing function of the analog processor. Seventeen static latches store the 3½ digits of BCD data as well as overrange, underrange and polarity information. Nine push-pull output buffers (capable of driving one standard TTL load each) provide the sign, digit strobe and multiplexed BCD data outputs, all of which are active high. The digit scan is an interlaced format of digits 1, 3, 2 and 4.

The monolithic LD111 analog processor contains a bipolar comparator, a bipolar integrating amplifier, two MOSFET input unity gain amplifiers, several P-Channel enhancement mode analog switches and the necessary level shifting drivers to allow the analog and digital processors to be directly interfaced. A wide range of conversion rates (1/3 to 12 samples per second) as well as two voltage ranges can be accommodated using externally determined RC time constants. All amplifiers are internally compensated.

The monolithic LD111A high performance analog processor contains a bipolar comparator, a bipolar integrating amplifier, a bipolar reference amplifier, two MOSFET input unity gain amplifiers, several P-channel enhnacement mode analog switches and the necessary level shifting drivers to allow the analog and digital processors to be directly interfaced. The high impedance input and reference buffer amplifiers eliminate source loading errors and provide the outstanding temperature coefficient inherent in this system. Break-before-make switch action insures that neither the analog input nor the reference voltage will be shorted to ground at any time.

The PMOS LD114 digital processor combines the counting storage and data multiplexing functions with the random logic necessary to control the quantized charge-balancing function of the analog processor. Seventeen static latches, in response to external control, store the 3 1/2 Digits of BCD data as well as underrange and polarity information. Ten push-pull output buffers (capable of driving one standard TTL load) provide the clock frequency ÷ 512, sign, digit strobe and multiplexed BCD data. Four data output format options allow the user to tailor the BCD output to his circuit requirements.

Features



- 0.05% Accuracy (of reading) ±1 Count (LD110/LD111)
- 0.02% Accuracy (of reading) ±1 Count (LD110/LD111A)
- Two Voltage Ranges — 1.999 V and 199.9 mV
- Sampling Rates up to 12 Samples/Sec.
- FET Input for $Z_{in} > 1000M\ \Omega$
- Auto-Zero Minimizes Effects of Offset, Drift and Temperature
- 10 μV Resolution (A Usable 20 mV Scale) (LD110/LD111A)
- Auto-Polarity
- Differential Input Capability
- External Latch Inhibit Control (LD114)
- Multiplexed Parallel BCD or Serial BCD Output (LD114)
- Active High or Active Low Logic Outputs (LD114)
- Overrange and Underrange Signals Available for Auto-Ranging Capability
- ÷512 Output Available for Phase Locked Loop Clock (LD114)
- TTL Compatible Outputs
- LD111A Directly Replaces LD111
- Typical T.C. of 5 ppm/°C (LD111A)

Applications

- DVM/DPM
- Micro Processor Interface
- Controllers
- Digital Weighing Systems
- Digital Thermometers
- Instrumentation
- Sampling A/D Converter

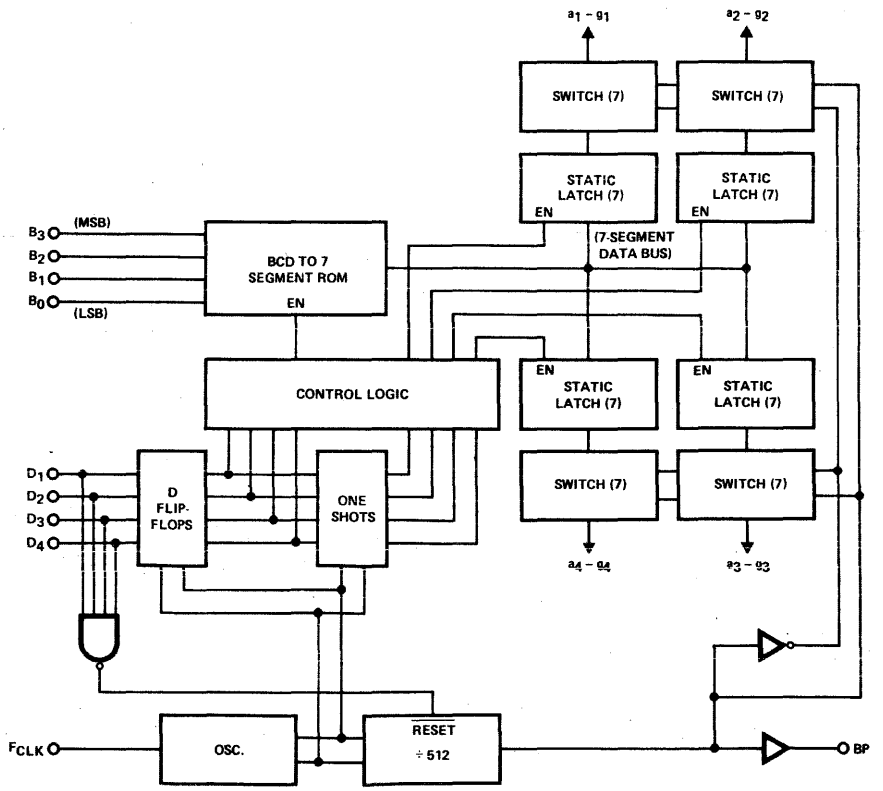
4 DIGIT LCD DECODER DRIVER

MONOLITHIC CMOS FOUR DIGIT DECODER DRIVER

Description

The DF411 Four Digit LCD Decoder Driver is a CMOS Monolithic multiplexed BCD to LCD Decoder Driver. One DF411 contains all of the circuitry needed to decode up to 4 digits of multiplexed BCD information and derive the AC signals needed to drive a 4 digit LCD display.

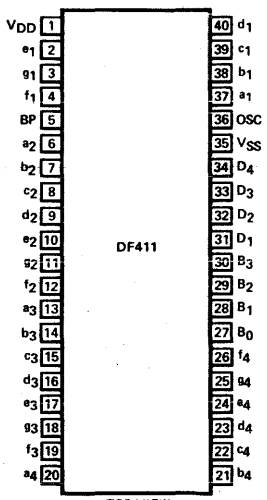
An on board oscillator, its frequency being controlled by an external capacitor, develops a backplane (BP) signal which is a square wave swinging between ground (V_{SS}) and the positive supply (V_{DD}). Segment drivers supply square waves of the same frequency as the backplane but either in phase for an OFF segment or out of phase for an ON segment. In this manner of LCD digit driving the net DC voltage applied between segment and backplane is zero, a necessary requirement for long display life. Digital input levels are defined as input voltages > 5V being a logic "1" and input voltages < 0.8V being a logic "0" with V_{DD} = 6V.



BCD input data is decoded into 7 segment form using an on board ROM. The 7 segment data is then latched into the appropriate static latches via the digit strobe inputs and control logic.

The pinout of the DF411 allows easy PC board interfaces to Dual In-Line LCDs as well as edge connecting types of displays.

Features



- **Decodes MUX BCD to LCD 7 Segments**
- **4 Digit Drive Capability**
- **Low Power Consumption**
- **TTL (Open Collector), DTL, CMOS Input Compatible**
- **Easy LCD/Driver Interfacing**
- **Internal Oscillator**
- **AC LCD Drive Signals**
- **Drives Large LCD Displays Easily**
- **Can be Clocked Using an External Oscillator**
- **Reset Capability Allows Easy Ganging of Devices to Drive More than 4 Digits**

C SUFFIX 0 to +70°C

LD130 ±3 DIGIT A/D CONVERTER
LD131 ±3 1/3 DIGIT A/D CONVERTER

MONOLITHIC CMOS CONVERTERS

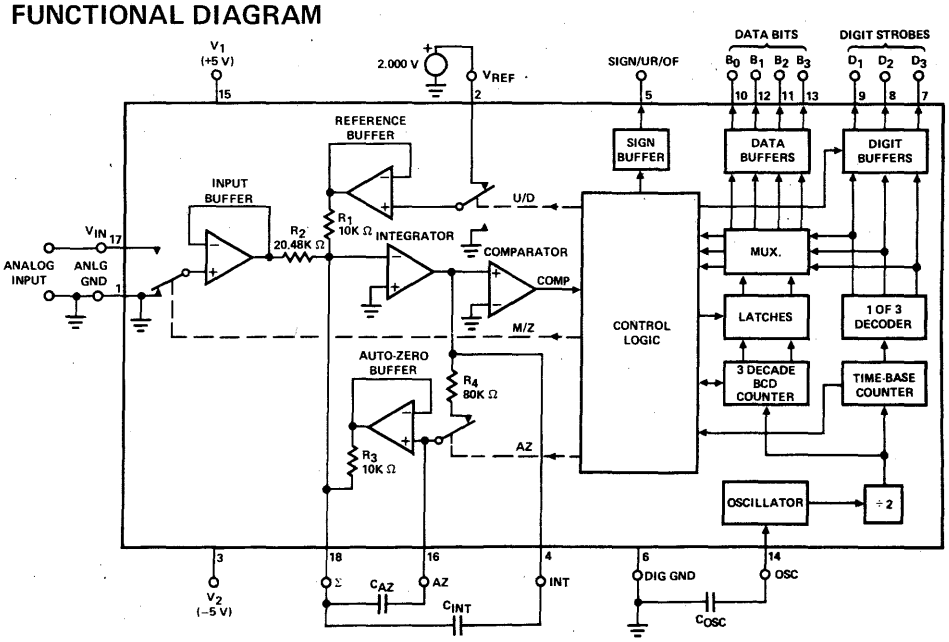
Description

The LD130 combines both the analog and digital subsystems of a 3 digit A/D system in a single monolithic CMOS I.C. The "Quantized Feedback" conversion scheme, introduced by Siliconix, provides the LD130 with an Auto-zero, Auto-polarity A/D system requiring only a single reference voltage. External parts are minimized by the on-chip resistors and buffer amplifiers. These high impedance input and reference buffer amplifiers eliminate source loading errors providing the outstanding temperature coefficient and ratio operation inherent in this system. Break-before-make switch action insures that neither the analog input nor the reference voltage will be shorted to ground at any time.

The LD130 3 digit A/D is made functionally complete by the following additions:

1. C_{AZ} (0.10 μF) between AZ and Σ pins
2. C_{INT} (0.033 μF) between INT and Σ pins
3. C_{OSC} (0.001 μF) between OSC and Digital Ground
4. $V_{REF} \cong 2.000$ V
5. ±5 V supplies (@ 3 mA)

The LD131 is functionally equivalent to the 3 digit LD130 A/D converter with the exception of not having overrange blinking when the count exceeds 999.



Features

- Low Cost
- Accuracy of 0.1% (of reading) ±1 Count
- Auto-Zero
- Auto-Polarity
- Low Power Consumption (25 mW Typical)
- 1 mV Resolution (1.000 V Full Scale LD130)
- 1 mV Resolution (1.500 V Full Scale LD131)
- Minimum of External Components (3 Capacitors, 1 Reference)
- Buffered Analog Input ($Z_{IN} > 1000M\,\Omega$)
- Buffered Reference Input ($Z_{IN} > 1000M\,\Omega$)
- Internal Clock Oscillator
- Overrange and Underrange Signals Provided for Auto-ranging
- Multiplexed BCD with Inter-Digit Blanking
- TTL Compatible Outputs (1 Load)
- Sampling Rates from 1 to 60 samples/second

Applications

- DVM/DPM
- Digital Thermometers
- Digital Environment Meters (Noise, Light, pH)
- Digital Scales
- Instrumentation
- Controllers
- μP Interface to Analog World

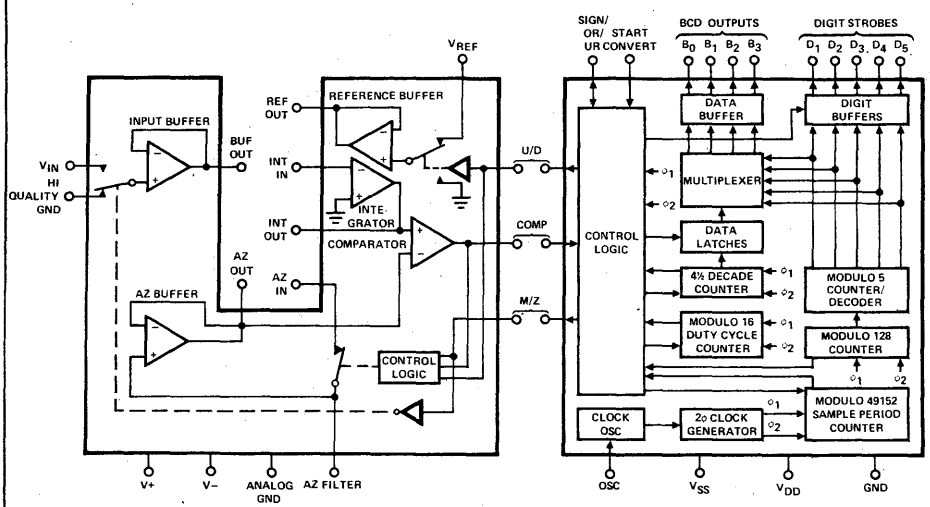
4½ DIGIT A/D CONVERTER

LD120 ANALOG A/D PROCESSOR/LD121 DIGITAL A/D PROCESSOR

Description

The LD120/LD121 4½ digit A/D system uses Siliconix's proprietary "Quantized Feedback" (patent pending) conversion technique. Intrinsic features of this sytem are Auto-Polarity, Auto-Zero and ratiometric operation. No critical components are required except for a stable voltage reference. The technique offers superior linearity, normal mode rejection, and stability due to the simultaneous integration of the unknown input and the reference voltages. Unlike other conversion techniques, the integrator output voltage never represents more than 30 counts, thus critical, high resolution performance is not required of either the integrator or comparator.

The LD120 analog processor is fabricated with a unique combined PMOS, bipolar process. It contains all the necessary amplifiers, MOSFET switches, and switch driver circuits for the system. The reference voltage input is fully buffered on the LD120 to eliminate the reference switch resistance as a source of error. All the amplifiers are internally compensated. The LD120 directly interfaces the LD121 digital processor with no additional active components required. (Continued on page 3)



Applications

- DVM/DPM's up to 4½ Digits
- A/D Converters
- Controllers
- Digital Weighing Systems
- Digital Process Control
- Digital Thermometers
- Scientific Instrumentation

Features

- Proven Siliconix "Quantized Feedback" A/D Technique
- 0.005% Accuracy ±1 Count, 2 Volt Range
- 0.01% Accuracy ±1 Count, 200.00 mV Range
- 0.5 Count Stability on 2.0000 V Range, 1.0 Count Stability 200.00 mV Range
- Linear to 28,500 Counts
- 1 to 5 Samples/Second
- MOSFET Input for $Z_{IN} > 1000M\ \Omega$
- Auto-Zero Cycle
- Intrinsic Auto-Polarity Operation
- Monolithic Design
  - LD120 Bipolar/PMOS Linear Process
  - LD121 Depletion Load PMOS/LSI Process
- Multiplexed TTL Compatible BCD Outputs
- Space Saving 300 Mil DIP Packages
- 25% Interdigit Blanking for Ghost-Free LED or Gas Discharge Display Interface
- Autoranging Control Outputs
- Convert-on-Command Input Permits Processor Controlled Operation
- Blinking Display Overrange Indication at 20,000 Counts (Electrically Selectable)
- Underrange Output Indicates Underrange at 1800 Counts

PIN CONFIGURATIONS

Dual-In-Line Packages

ORDER NUMBER LD120CJ

ORDER NUMBER LD121CJ

©IC MASTER 1978

APPLICATIONS

1. The recommended supply voltages are:

   $V+ = 12\ V \pm 10\%$
   $V_{DD}, V- = -12\ V \pm 10\%$
   $V_{SS} = 5\ V \pm 10\%$
   $V_{REF} = 2\ V$ to $10\ V$

2. The reading is essentially the proportionality of V_{IN} compared to V_{REF} as shown in the gain equation:

$$V_{READOUT} = (V_{IN} - V_{HI\text{-}Q\ GND}) \bullet \frac{R_1}{R_2} \bullet \frac{65{,}536}{V_{REF}}$$

   R_1 is independent of the U/D switch resistance due to the incorporation of the U/D buffer amplifier in the LD120. Gain can be calibrated either by varying V_{REF} or trimming the resistance of R_1 to obtain the correct full scale reading.

3. The output of the integrator should always be more positive than $-9\ V$ (for $V_{DD} = -12\ V$) to obtain specified accuracy:

$$V_O\ (min) > -9\ V$$

$$V_{O\ (min)} = -\frac{V_{REF}\ R_3}{2R_1} - \frac{15}{f_{OSC}\ C_{INT}}\left[\frac{V_{REF}}{2R_1} + \frac{V_{IN\ (max)}}{R_2}\right]$$

   Large integrator swing provides the best performance. V_{INT} (P-P) = 6 to 8 volts is recommended.

$$V_{INT\ (P\text{-}P)} = \frac{30}{f_{OSC}\ C_{INT}}\left[\frac{V_{REF}}{2R_1} + \frac{V_{IN\ (max)}}{R_2}\right]$$

4. Although any oscillator frequency from 50 kHz to 250 kHz can be used, frequencies that provide integer number of line frequency cycles per measure period provide maximum line noise rejection. These frequencies are:

$$f_{OSC} = \frac{32{,}768\ F_{LINE}}{n},\ n = 8, 9, 10, \ldots 40$$

5. The sampling rate = $f_{OSC}/49{,}152$ cycles/sample.

6. After a start conversion pulse, data is valid 32,850 clock pulses later and remains valid until at least 32,768 clock pulses after the next start pulse. During continuous cycle operation, data is assured valid when M/Z is high or 100 clock cycles after the one/zero transition of M/Z.

7. Any capacitive coupling between U/D and Comp. is detrimental to proper algorithm operation. PC board layouts should not allow these traces to be adjacent.

8. All power supplies should be capacitively bypassed to ground for maximum count stability.

9. C_{INT} and C_{STRG} should be selected for low leakage. Silvered mica is recommended for C_{INT} and mylar for C_{STRG}. Polypropylene capacitors also work well for both C_{STRG} and C_{INT}.

10. For a given leakage into C_{STRG} of I_{STRG}:

$$\Delta V_{STRG} = \frac{\Delta t\ I_{AZ}}{C_{STRG}}$$

where Δt = a measure interval $= \frac{2}{3}\ \frac{1}{F_{SAMPLE}}$

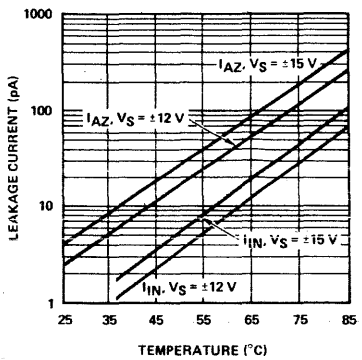
ΔV_{STRG} will inject a ΔI integrator of $\Delta V_{STRG}/R_3$

Now a ΔI integrator would have been equivalent to a $\Delta V_{IN}/R_2$

So the equivalent input drift is $\Delta V_{IN} = \frac{1}{2}\ \frac{R_2}{R_3}\ \frac{2}{3}$

$$\frac{I_{STRG}}{F_{SAMPLE}\ C_{STRG}}$$

the ½ factor is provided by integrator action.



Example: We wish to see 1 count (0.1 mV of ΔV_{IN} on the 2 V range) of drift for the circuit of Figure 6 with $I_{STRG} = 100\ pA$ @ 70°C. What C_{STRG} is needed?

Answer:

$$C_{STRG} = \frac{R_2}{R_3}\ \frac{1}{3}\ \frac{I_{STRG}}{F_{SAMPLE} \cdot \Delta V_{IN}} =$$

$$\frac{100K\ \Omega}{62K\ \Omega} \times \frac{1}{3} \times \frac{10^{-10}\ F}{3\ Hz \times 10^{-4}\ V}$$

$= 0.18\ \mu F$ Minimum

Typical Leakage Over Temperature

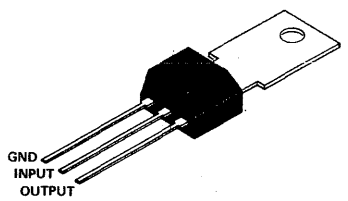
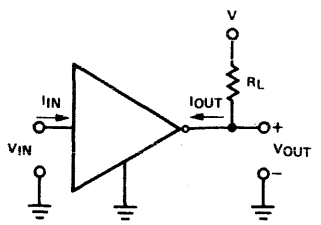
high speed, power peripheral drivers (2.0 A, 60 V) *designed for . . .*

- **Laser Diode Pulsing**
- **High Speed Line Drivers**
- **CMOS to High Current Interfacing**
- **TTL to High Current Interfacing**
- **Switching Reactive Loads**



BENEFITS



- Directly Interfaces to CMOS, TTL, DTL, and MOS Logic Families Low Input Current, Typically <1 nA
- Fan Out from CMOS Greater than 100
- Output will Sink 2 Amps
- Open Drain Output
- Output will Withstand 90 V
- No Power Supply Required
- Easily Paralleled for Greater than 2 Amp Currents
- Very Short Propagation Delay t_{on} Typically less than 4 ns

10	V_{OL} Output ON Voltage (Note 1)		0.3		V	I_O = 100 mA, V_{IN} = 5 V
11			1.0	1.5		I_O = 300 mA, V_{IN} = 5 V
12			2.0	3.5		I_O = 1.0 Amp, V_{IN} = 10 V
13	Propagation Delay to tpd0 Logical "0" Output (Notes 2, 3)		5		ns	I_O = 0.3 Amp, V_{IN} = 0–15 V
14			4	10		I_O = 1.0 Amp, V_{IN} = 0–10 V
15	Propagation Delay to tpd1 Logical "1" Output (Notes 2, 3)		5			I_O = 0.3 Amp, V_{IN} = 5–0 V
16			4	10		I_O = 1.0 Amp, V_{IN} = 10–0 V
	Specifications For Use With TTL					
17	V_{OL} Output ON Voltage (Note 1)		0.3		V	I_O = 100 mA, V_{IN} = 5 V
18			1.0	1.5		I_O = 300 mA, V_{IN} = 5 V
19	tpd0 Propagation Delay to Logical "0" Output (Notes 2, 3)		8		ns	V+ = 10 V, R_L = 30 Ω, I_O = 0.3 Amp
20	tpd1 Propagation Delay to Logical "1" Output (Notes 2, 3)		5			V+ = 10 V, R_L = 30 Ω, I_O = 0.3 Amp

NOTES:
1. Pulse Test – 80 μs pulse, 1% duty cycle.
2. Sample Test 3. See switching time test circuit.

INTRODUCTION TO LINEAR

The Master Selection Guide provides sufficient information to make initial product selections, to lead you to a group of device numbers and manufacturers' names. It enables you to find the products which are most appropriate to fulfill your major requirements and then provides data for many of the more important products.

All devices that appear in this section, both in the initial selection guide and in the data pages, are included in the Part Number and Product Indexes. These index listings lead to the page and the line on that page where each device appears.

In the Linear section over 1000 operational amplifiers are covered. Since there are so many devices, the operational amplifier entries have been given special consideration. Separate lists are provided for those which have High Speed, High Voltage capability, Wide Bandwidth, etc. Under General Purpose, four amplifier types are listed; these are the ones that the high volume manufacturers indicate are the most widely used; however, quad amplifiers should also be considered when appropriate. If you have located an op amp in a specialized category, you can review its characteristics by finding it in the Part Number or Product Indexes and looking it up in the Operational Amplifier Characteristics and in the Data Sections.

Following the special lists, the "Operational Amplifier-Characteristics" listings, categorize amplifiers by input parameters. They are arranged in order of increasing offset voltage, bias current, offset current and then voltage drift. The other parameters listed do not affect the sequence in which the devices are presented. The column labeled "Comp" indicates the number of external components normally used for compensation; for example, "0" means no compensation is required.

Consumer circuits such as audio amplifiers, AM, FM, and TV circuits as well as some digital devices (watches, calculators, etc.) are covered by model number in the Consumer Circuit Section. Linear devices and unusual circuits which do not fit elsewhere are listed under the heading "Other Linear Devices."

LINEAR–Amplifiers, Special Purpose

Function	Device	Source	Line
Special Purpose			
AC Amplifier, Dual with automatic gain control, for tape recorders	M5130	Mitsubishi	
AC Amplifier, Quad, Single Supply	CA3048	†RCA	
	CA3052	RCA	
AGC/Squelch Amplifier (Gain Controlled Amplifier)	LM170	†National	
	LM270	National	
	LM370	National	10
AGC Generator, for SSB receivers	SL621C	Plessey	
	SL1621C	Plessey	
AGC Generator (voice operated gain adjusting device)	SL620C	Plessey	
	SL622C	Plessey	
	SL1620C	Plessey	
	SL1622C	Plessey	
Amplifier, CATV. See Linear Consumer Circuits, TV			
Amplifier, Audio with three NPN transistors	LM389	National	20
Amplifier, triple for active filters (See also Linear Other Devices, Active Filters)	TAA960	Signetics	
Current Amplifier (unity gain, 100 ma output)	SH0002C	Fairchild	
	LH0002	†National	
	LH0002C	National	
	9910	†OEI	
Current Amplifier (unity gain, 200 ma output)	3553	† Burr-Brown	30
	9963	†OEI	
Current Amplifier (unity gain, 300 ma output)	MC1438	Motorola	
	MC1538	†Motorola	
Current Amplifier (unity gain, 500 ma output)	823	Beckman	
	9911	†OEI	
Current Amplifier (unity gain, 600 ma output)	**HA-2630**	**†Harris** (696)	40
	HA-2635	**Harris** (696)	
Current Amplifiers, See also Linear Followers			
Differential Input/Differential Output Amplifier (bandwidth less than 2 MHz)	μA730C	Fairchild	
	μA730M	†Fairchild	
	MC1590	†Motorola	
	CA3000	†RCA	
	CA3007	†RCA	
	NE515	Signetics	50
	SE515	†Signetics	
Differential Input/Single Output DC Amplifier with switched inputs for a gain of ±1	MN2120	Micro Net	
	MN2120H	Micro Net	
Differential/Cascode Amplifier (dc to r.f.)	MC3330	Motorola	
	LM3028	†National	
	LM3053	†National	
	CA3028	†RCA	
	CA3028A	†RCA	60
	CA3028B	†RCA	
	TA7045	Toshiba

Function	Device	Source	Line
Special Purpose (Cont'd)			
Microphone/Headphone Amplifier (Cont'd.)	SL1630	Plessey	
	TA1066	Toshiba	130
Microphone Amplifier (for microphones in telephones)	TBA830	Siemens	
	TAA970	Signetics	
	TCA980	Signetics	
Mixer (to 200 MHz)	S042	Siemens	
MOS Amplifier, MOS and NPN transistors, 3 terminal	TAA320	Signetics	
	TAA320A	Signetics	
Operational Amplifier, Dual with Dual Voltage Comparator	MC3405	Motorola	140
	MC3505	†Motorola	
Operational Transconductance Amplifier	CA3060	RCA	
	CA3060	†RCA	
	CA3060A	†RCA	
	CA3060B	†RCA	
	CA3080	RCA	
	CA3080A	†RCA	150
Power Amplifier, Motor and Actuator Driver, to 24V, 3a	IH8510C	Intersil	
	IH8510M	†Intersil	
	IH8520C	Intersil	
	IH8520M	†Intersil	
	IH8553C	Intersil	
	IH8553M	†Intersil	
Power Amplifier/Switch (equivalent to an operational amplifier with uncommitted Darlington power output transistor), Programmable Gain	CA3094	†RCA	160
	CA3094A	†RCA	
	CA3094B	†RCA	
Preamplifier, JFET (Impedance Converter)	T100	Siliconix	
	T300	Siliconix	
Preamplifier JFET (to precede operational amplifiers and comparators)	HA-2000	†Harris	
	HA-2005	Harris	170
Preamplifier, Low Noise. (60db gain, 15MHz bandwidth)	ZN459C	Ferranti	
	ZN459T	Ferranti	
Preamplifier, Precision (to precede operational amplifiers)	LM121	†National	
	LM221	National	
	LM321	National	
	LM121A	†National	180
	LM221A	National	
	LM321A	National	
Preamplifier, Temperature Controlled	μA727C	Fairchild	
	μA727M	†Fairchild	
Preamplifier, with ALC transistor, for tape recorders	LA3201	Sanyo	
Preamplifier with automatic level control, for tape recorders	TDA1054	SGS	
	TDA1002	Signetics	190

LINEAR–Operational Amplifiers

General Purpose

The 101A series consists of the 101A (55°C to 125°C), the 201A (25°C to 85°C) and the 301 (0°C to 70°C). These units require an external compensation capacitor which permits the bandwidth to be optimized for particular applications.

LM101A	TI	
TA7506	Toshiba	

The performance of the 741 series is similar to the 101. These units include internal compensation to make the device stable and to eliminate the need for an external capacitor.

Dual Amplifiers. The 1458 (0°C to 70°C) and the 1558 (55°C to 125°C) offer approximately the same performance as the 741. Compensation is built in.

FET Input. The "741" of the FET input devices has yet to be established. Such a device requires very low cost, several sources, and many users. Commercial devices in the 155 series above meet some of these criteria, however, devices from the series below are generally lower in cost.
